**FOR HOUSING AUTHORITY:  
VACANT, Housing Authority Member  
Annie Hill Herring, Housing Authority Member**

---

Pittsburg City Council meetings are held the first and third Mondays of each month at 7:00 p.m. The Housing Authority meets in conjunction with the City Council on the third Monday of each month. The Pittsburg City Council meets regularly in the Council Chamber at 65 Civic Avenue, unless otherwise noted above. The City Council also sits as the Board of Directors of several other City agencies. The stipends for all agency members conform to state statutes governing compensation amounts. All other Agencies meet on an as needed basis and will be listed above if applicable. Copies of the open session agenda packets, which are distributed to the City Council, are on file in the office of the City Clerk, 65 Civic Avenue, Pittsburg, California, and are available for public inspection, beginning 72 hours in advance, during normal business hours (8:00 a.m. – 5:00 p.m., Monday through Friday, except from noon to 1:00 p.m. and City holidays). The agenda and reports are also located on the City's website at [www.ci.pittsburg.ca.us](http://www.ci.pittsburg.ca.us). Additionally, if any reports or documents, which are public records, are distributed to the City Council less than 72 hours before the meeting, those reports and documents will also be available for public inspection in the City Clerk's Office and on the day of the meeting in the Council Chamber at the public counter area below the dais.

**NOTICE TO PUBLIC (Attached)**

**COUNCIL COMMITTEES LIST (Attached)**

**COMMISSIONS/COMMITTEES MEETING SCHEDULE (Attached)**

**AUDIENCE REMARKS**

The Audience Remarks period is for the public to comment on any items scheduled to be heard during the Closed Session portion of the meeting, if applicable.

**6:00 P.M.**

**CONVENE IN CLOSED SESSION**

1. CONFERENCE WITH REAL PROPERTY NEGOTIATORS (Pursuant to Section 54956.8):

Property: APN's 095-150-032, 094-080-011, 095-160-001, 095-160-002, 094-090-001, 094-080-002; Negotiators: Joe Sbranti, Garrett Evans; Negotiating Parties: Energy Delivery Solutions LLC; Under negotiation: Both price and terms of payment

2. CONFERENCE WITH LEGAL COUNSEL - ANTICIPATED LITIGATION FOR THE CITY OF PITTSBURG; Significant exposure to litigation pursuant to paragraph (2) of subdivision (d) of Section 54956.9:

Two (2) cases

3. CONFERENCE WITH LEGAL COUNSEL - ANTICIPATED LITIGATION FOR THE CITY OF PITTSBURG; Initiation of litigation pursuant to paragraph (4) of subdivision (d) of Section 54956.9:

Two (2) cases

**7:00 P.M.**

**CONVENE IN OPEN SESSION FOR REGULAR MEETING**

**CALL TO ORDER**

**ROLL CALL**

**PLEDGE OF ALLEGIANCE**

**CITY MANAGER REPORTS/REMARKS**

The City Manager may make brief announcements or informal comments at this time and brief the Council on items of interest. (No Action Required)

## **CITIZENS REMARKS**

Members of the audience who wish to address the City Council or Agency Boards on issues that are not scheduled for the agenda and on any items listed as part of the Consent Calendar should complete a Speaker's Card available at the dais. Please read the card carefully in order to fill out the card properly. Submit the completed card to the City Clerk before the item is called, preferably before the meeting begins. Individuals will be given three minutes to address the Council unless additional time is allowed as provided for spokespersons. Prior to speaking, each member of the public shall state their name and business and City of residence in a clear and audible tone of voice. (No Action Required)

## **CITY COUNCIL MEETING**

### **PUBLIC HEARING**

4. Introduction and Waive First Reading of an Ordinance Amending Title 18 of the Pittsburgh Municipal Code Related to Permitting Small Recycling Facilities and Mail Order or Direct Selling Establishments in the M District AP-17-1235 (RZ)

This is a continued public hearing on a request for a zoning text amendment to add "small recycling facility" and "mail order or direct selling establishment," as conditionally permitted uses in the M (Mixed Use) District. On June 13, 2017, the Planning Commission adopted Resolution No. 10064, recommending adoption of the proposed amendment. On July 17, 2017, the City Council held a public hearing and voted 2-1 to continue the item to a date uncertain. On August 20, 2018, at the request of the Mayor, the City Council voted 3-0 to continue the item to the September 4, 2018, meeting.

5. Introduction and Waive First Reading of an Ordinance and Consideration of a Resolution Approving the Alves Ranch Project, AP-18-1348 (RZ, SUBD, DR)

This is a public hearing on a request to: 1) introduce and waive first reading of an ordinance approving a zoning map amendment and EIR addendum; and 2) adopt a resolution approving a vesting tentative map and design review, to allow for the construction of 346 single-family dwelling units, a 12-acre commercial site, and ancillary features. The project site is located along the north side of West Leland Road, south of State Route 4. Assessor's Parcel Nos. 097-700-001; 097-700-002; and 097-700-005. On August 21, 2018, the Planning Commission considered the proposal in its entirety and adopted Resolution No. 10102, recommending approval of the project.

## **CONSIDERATION**

6. Adoption of a City Council Resolution Approving an Option Agreement between the City of Pittsburgh and MWF Holdings, LLC for Four City Owned Properties Located at 385 E. 3rd Street, 389 E. 3rd Street, E. 3rd Street, and 495 E. 3rd Street

The City of Pittsburgh and MWF Holdings, LLC, a Delaware limited liability company (Making Waves), propose to enter into an option agreement (Agreement) for four City owned properties located at 385 E. 3rd Street, 389 E. 3rd Street, E. 3rd Street, and 495 E. 3rd Street, with County Assessor's Parcel Numbers 073-010-005, 073-010-

004, 073-010-003, and 073-010-002 respectively (collectively, the “Properties”).

7. Adoption of a City Council Resolution Approving the Use of Business Improvement District Funds by the Pittsburgh Chamber of Commerce for Police and Staff Services for the 2018 Seafood and Music Festival

The Pittsburgh Chamber of Commerce (Chamber) proposes and the City accepts the use of Business Improvement District (BID) funds for police and staff services for the 2018 Seafood and Music Festival.

8. By Minute Order, Consider Commission Appointment to Vacancy on the Housing Authority Commission

One (1) opening exists on the Housing Authority Commission. Commissioners must be Section 8 tenants of the Pittsburgh Housing Authority. The City has advertised for the opening and received two applications. Both applicants were invited to interview with the City Council on August 20 and one applicant was interviewed at that time.

### **CONFLICT OF INTEREST STATEMENT**

|                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------|
| City Council/Agency Members may make any conflict of interest declarations pertaining to Consent Calendar items at this time. |
|-------------------------------------------------------------------------------------------------------------------------------|

### **CONSENT CALENDAR**

#### **COMBINED CITY COUNCIL, PITTSBURG POWER COMPANY CONSENT CALENDAR**

9. Minutes

Minutes of August 20, 2018

10. Adoption of a Pittsburgh Power Company Resolution Approving a Purchase and Sale Agreement, a Loan Agreement, a Promissory Note, and a Deed of Trust and Security Agreement between the Pittsburgh Power Company and Natalie Cooper for 615 Railroad Avenue

The Pittsburgh Power Company, a Joint Powers Authority (PPC, Seller, or Beneficiary) and Natalie Cooper, an individual, doing business as Lumpy’s Diner Pittsburgh (Buyer, Borrower, or Trustor), propose to enter into a purchase and sale agreement (PSA) and loan agreement, promissory note, and deed of trust and security agreement (collectively, the Loan Documents”) for the purchase and sale of 615 Railroad Avenue, also known as County Assessor’s Parcel Numbers 085-171-012 (Property).

11. Adoption of a City Council Resolution Approving the Terms and Conditions of Employment for Teamsters Union, Local 856 for the Period July 1, 2018–June 30, 2020.

The Memorandum of Understanding between the City of Pittsburgh and the Teamsters Union, Local 856 expired on June 30, 2018. The City and Teamsters representatives have reached a tentative agreement on the terms and conditions of employment for fiscal years 2018–2019 and 2019-2020 that provides for a salary adjustment for all classifications, as well as the implementation of significant cost sharing measures

relating to the California Public Employees Retirement System (CalPERS). Should Council approve these terms, staff will prepare successor MOUs that incorporate the agreed upon changes.

### **COUNCIL MEMBER REPORTS/REMARKS**

|                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Council Members may make brief announcements or informal comments at this time. Council members may ask questions for clarification from City staff, and make a report on their activities, including reports on committee assignments (see attached list of ad hoc committees and other public agencies in which Council members participate). (No Action Required) |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### **ADJOURNMENT to September 17, 2018**

## **NOTICE TO PUBLIC**

### **GENERAL INFORMATION**

Copies of the open session agenda packets, which are distributed to the City Council, are on file in the office of the City Clerk, 65 Civic Avenue, Pittsburg, California, and are available for public inspection, beginning 72 hours in advance, during normal business hours (8:00 a.m. – 5:00 p.m., Monday through Friday, except City holidays). The full packets are also located on the City's website at [www.ci.pittsburg.ca.us](http://www.ci.pittsburg.ca.us). If any reports or documents, which are public records, are distributed to the City Council less than 72 hours before the meeting, those reports or documents will be available for public inspection in the City Clerk's Office and on the day of the meeting in the Council Chamber at the public counter area below the dais.

### **SPEAKER'S CARD**

Members of the audience who wish to address the City Council on issues that are not scheduled for the agenda and on any items listed as part of the agenda should complete a Speaker's Card available at the dais. Please read the card carefully in order to fill out the card properly. Submit the completed card to the City Clerk before the item is called, preferably before the meeting begins. Individuals will be given three minutes to address the Council unless additional time is allowed as provided for spokespersons. Speakers are not permitted to yield their time to another speaker. Prior to speaking, each member of the public shall state their name and business and City of residence in a clear and audible tone of voice. Pursuant to the Brown Act, no action may be taken by the City Council on items not already scheduled on the agenda; however, the City Council may refer your comments/concerns to staff or request that the item be placed on a future agenda.

### **PUBLIC HEARINGS**

Persons who wish to speak on Public Hearings listed on the agenda will be heard when the Public Hearing is opened, except on Public Hearing items previously heard and closed to public comment. After the public has commented, the item is closed to public comment and brought to the Council/Agency level for discussion and action. Further comment from the audience will not be received unless requested by the Council/Agency.

There is a 90-day limit for the filing of a challenge in the Superior Court to certain City administrative decisions and orders which require a hearing by law, the receipt of evidence, and the exercise of discretion. The 90-day limit begins on the date the decision is final (Code of Civil Procedure Section 1094.6). Further, if you challenge an action taken by the City Council in court, you may be limited, by California law, including but not limited to Government Code Section 65009, to raising only those issues you or someone else raised in the public hearing, or in written correspondence delivered to the City Council prior to or at the public hearing. The City Council may be requested to reconsider a decision if the request is made prior to the next City Council meeting, regardless of whether it is a regular or special meeting.

### **NOTICE TO THE DISABLED AND VISUALLY OR HEARING IMPAIRED**

In compliance with the Americans with Disabilities Act, the City of Pittsburg will provide special assistance for disabled citizens. Upon request, an agenda for any meeting shall be made available in appropriate alternative formats. The Council Chamber is equipped with sound amplifier units for use by the hearing impaired. The units operate in conjunction with the Chamber's sound system. You may request the sound amplifier from the City Clerk for personal use during Council meetings. If you need special assistance to participate in this meeting, or are requesting a specially formatted agenda, please contact the City Clerk at 925-252-4850. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting or provide the requested agenda format. (28 CFR 35.102-35.104 ADA Title II)

### **DISRUPTIVE CONDUCT**

The Council requests that you observe the order and decorum of our Council Chamber by turning off or setting to vibrate all cellular telephones, and that you refrain from making personal, impertinent, or slanderous remarks. Boisterous and disruptive behavior while the Council is in session, and the display of signs in a manner which violates the rights of others or prevents others from watching or fully participating in the Council meeting, is a violation of our Municipal Code and any person who engages in such conduct can be ordered to leave the Council Chamber by the Mayor.

### **LIVE MEDIA BROADCASTING ADVISEMENT**

City Council meetings are webcast live on the City's website at [www.ci.pittsburg.ca.us](http://www.ci.pittsburg.ca.us) on the Streaming Media page. Past meetings are also archived on that webpage. City Council meetings are also broadcast live on CCTV, Channel 24 also re-run at a later date. For more information, please contact the City Clerk's office at 252-4850.

## COMMISSION/SUBCOMMITTEE MEETING SCHEDULE

Following is a tentative list of currently scheduled Commission meetings for the upcoming month. For further information, please visit our website at [www.ci.pittsburg.ca.us](http://www.ci.pittsburg.ca.us) and click on the CALENDAR link for meetings, dates, times and locations.

| Commission                    | Tentative Meeting Dates                      |
|-------------------------------|----------------------------------------------|
| Planning Commission           | 2 <sup>nd</sup> and 4 <sup>th</sup> Tuesdays |
| Community Advisory Commission | 1 <sup>st</sup> Wednesday                    |
|                               |                                              |

Planning Commission meetings are regularly held the second and fourth Tuesdays of the month in the Pittsburg City Hall Council Chambers.

Community Advisory Commission meetings are regularly held the first Wednesday of the month in the Pittsburg City Hall Council Chambers.

In addition to the Commission Meetings listed above, there are several Council Member Subcommittees that meet on an “as needed basis”. For a list of subcommittees that Council Members and staff are assigned to, please see the “Council Committee List” attached to the agenda.

Subcommittee Meetings that are anticipated to occur in the coming month vary. The meeting dates, times and locations for these meetings are yet to be determined. This information will be posted on the City’s website, [www.ci.pittsburg.ca.us](http://www.ci.pittsburg.ca.us), as soon as it is determined. Please check the Calendar on the City’s website for information.

For further information, contact the City staff member assigned to that Commission or Subcommittee.

**OFFICE OF THE CITY MANAGER/EXECUTIVE DIRECTOR  
65 Civic Avenue  
Pittsburg, CA 94565**

**DATE:** 8/22/2018

**TO:** Mayor and Council Members

**FROM:** Joe Sbranti, City Manager

**SUBJECT:** Introduction and Waive First Reading of an Ordinance Amending Title 18 of the Pittsburg Municipal Code Related to Permitting Small Recycling Facilities and Mail Order or Direct Selling Establishments in the M District AP-17-1235 (RZ)

**MEETING DATE:** 9/4/2018

**EXECUTIVE SUMMARY**

This is a continued public hearing on a request for a zoning text amendment to add “small recycling facility” and “mail order or direct selling establishment,” as conditionally permitted uses in the M (Mixed Use) District. On June 13, 2017, the Planning Commission adopted Resolution No. 10064, recommending adoption of the proposed amendment. On July 17, 2017, the City Council held a public hearing and voted 2-1 to continue the item to a date uncertain. On August 20, 2018, at the request of the Mayor, the City Council voted 3-0 to continue the item to the September 4, 2018, meeting.

**FISCAL IMPACT**

There is no fiscal impact on the City from the proposed ordinance. Standard business license fees would be collected on an annual basis for businesses in the City of Pittsburg.

**RECOMMENDATION**

Staff recommends that after the staff presentation the City Council open the public hearing, allow the applicant an opportunity to speak, take public testimony, and close the public hearing.

If the City Council agrees with the Planning Commission’s recommendation, staff recommends the City Council move to introduce, waive further reading, and pass to second reading the attached ordinance amending Pittsburg Municipal Code (PMC) Title 18 (“Zoning”) related to the permitting of small recycling facilities and mail order or direct selling in the M District.

## **BACKGROUND**

Mt. Diablo Resource Recovery (formerly Pittsburg Disposal) purchased the vacant building at 555 California Avenue several years ago and relocated their downtown business office to this location. On April 3, 2017, Mt. Diablo Resource Recovery filed an application for a zoning text amendment to allow “small recycling facility,” and “mail order or direct selling of merchandise,” (as defined by PMC sections 18.08.080(27)(b) and 18.08.080(26)(e)), as conditionally permitted uses in the M District, in order to facilitate implementation of the “Recycle Smart” program.

## **SUBCOMMITTEE FINDINGS**

The general project has been brought before the Land Use Subcommittee on three occasions. On March 5, 2015, a proposal was first presented to the Subcommittee by the applicant to request input on the potential use of the site as a recycling center which would include warehousing of reusable items with a retail component. The subcommittee concurred with staff’s recommended approach that the business owner submit a request for a zoning code amendment to allow a recycling facility ancillary to a secondhand clothing and appliance store within the M district, subject to approval of a use permit. During this meeting the subcommittee voiced concerns about safety, security, outdoor storage/debris, and noise. Specific recommendations were made to address each of these issues and the applicant was in agreement with all Subcommittee recommendations discussed.

On April 3, 2017, the applicant filed Zoning Text Amendment Application No.17-1235 for the project. The project concept was modified from its 2015 iteration to include a small recycling facility and mail order or direct selling establishment (rather than a “secondhand clothing and appliance store”) in order to better match the best fit land use classification as defined in PMC section 18.08.080. The current proposal includes a zoning text amendment to allow both uses in the M District, but only in areas north of California Avenue and east of Harbor Street and also subject to use permit approval.

On April 10, 2017, the application was presented to the Subcommittee for consideration. During this meeting the subcommittee continued to be supportive of the process as proposed by staff; however, they raised some additional concerns related to grocery carts that could accumulate in the area, scavengers picking through garbage bins in the nearby neighborhoods, and they suggested the zoning text amendment be limited to the commercial areas north of California Avenue east of Harbor Street. The applicant again agreed to suggested operational conditions, including a limit on the days and hours of operation to minimize any nearby scavenging. At the conclusion of the LUS meeting, the subcommittee recommended that the zoning text amendment be taken to the Planning Commission and then to the City Council for review, as appropriate.

On June 13, 2017, the Planning Commission held a public hearing to consider the zoning text amendment and voted 5-0, with two absent, to adopt Resolution 10064 (Attachment 2) recommending City Council approval of the text amendment.

On July 17, 2017, the City Council held a public hearing to consider the proposed zoning text amendment. Following the public hearing, the City Council voted 2-1 to continue this item to the next meeting. The item was subsequently continued to a date uncertain to allow the applicant additional time to meet with neighboring residents to address concerns raised during the meeting.

On May 8, 2018, the applicant held an informational meeting, and invited residents of the neighboring Stone Harbor subdivision to tour the site and provide feedback to the applicant.

On July 18, 2018, the project was once again brought before the Subcommittee to provide an update on the applicant's outreach efforts and discuss potential conditions of approval related to the potential use permit application. During this meeting, Councilmembers Craft and Banales, as well as Commissioner Robinson, voiced their concerns regarding noise resulting from the recycling component. The applicant stated that recyclables would be collected in smaller containers within the existing building and proposed that the bins could be taken from the site by bin trucks, which are smaller trucks with a forklift like attachment, which would eliminate much of the noise resulting from recyclable materials being dumped into a standard truck bed. Councilmember Banales recommended a condition be added to address where the trucks would be loaded, and how trucks and other clients would enter the parking area of the facility.

On August 20, 2018, the City Council voted 3-0 to continue this item to the September 4, 2018, City Council meeting.

### **STAFF ANALYSIS**

Project Description: Implementation of the Recycle Smart Program by Mt. Diablo would be a two-step application process: the first step, as mentioned above, would be approval of a zoning text amendment to allow a "small recycling facility" and "mail order or direct selling establishment," subject to a use permit, within that portion of the M District north of California Avenue and east of Harbor Street. It should be noted that the application being voted on by the City Council at this point only regards the zoning text amendment portion and would not entitle the use of the site as either a small recycling facility or a mail order or direct selling establishment.

If the zoning text amendment is approved, the applicant would be required to obtain a use permit to legally establish the use. While the City Council is not being asked to make a decision on the use permit at this time, staff and the applicant have put together information regarding the proposed use to help inform the public and City Council of the applicant's intent. As such, staff has worked with the applicant to draft potential conditions of approval intended to address concerns raised during the previous public hearings and Subcommittee meetings, which would be incorporated into a potential use permit approval (Attachment 3).

As part of the potential use permit portion of the application, the proposed retail/mail order or direct selling use would be limited to an 1,805 sq.ft. area within the existing warehouse along the eastern (front) end of the building (Attachment 4). This area would utilize display tables and include two new offices: one for sales persons who would handle both the online sales and future walk-in customers, and one for the warehouse manager. All proceeds would be distributed to non-profit organizations. The proposed recycling area, where recycling bins and a small scale would be located, would occupy a 500 s.f. portion (2.5%) of the 20,000 s.f. building (Attachment 4) and would be located at the southwestern end (back) of the building along California Avenue, more than 130 feet from the nearest residence. The use would utilize only small intake equipment, and no large processing equipment. Collected recyclables would be stored inside the building and removed from the site daily to control odor. There would be no outside storage of bins or materials, and trucks would be kept at the Loveridge Road facility. Operations would be limited to the hours of 9:00 a.m. and 3:00 p.m., and noise levels are not anticipated to exceed 60 decibels. The applicant

intends to continue the primary use of the building as an administrative office and payment center, which is permitted.

Analysis: The proposed zoning text amendment and use permit request is part of “Recycle Smart,” a comprehensive effort by Mt. Diablo to provide resource recovery to the fullest extent possible. To date, the applicant estimates that over 2,000,000 pounds of recyclable materials have been diverted from the landfill. The potential relocation of the buyback center from the heavily industrial Loveridge Road facility to 555 California Avenue would provide a more convenient, safer alternative for the community to recycle.

With the locational limitations proposed, the only area that the proposed amendment would apply too would include the stretch of land located on the north side of California Avenue, between Harbor Street and approximately 100 feet west of Edward Avenue. This area is zoned PD (Planned Development, City Council Ordinance No. 09-1319) District, and has been designated by the Railroad Avenue Specific Plan (RASP) as Transit Oriented Development Medium Density (TOD-M). Allowable land uses in TOD-M and Transit Oriented Development High Density (TOD-H) Districts are the same as those of the M District, as specified in the RASP and Title 18 of the PMC.

Prior to the adoption of the RASP, the General Plan and zoning designations for all of the parcels currently zoned M District along California Avenue east of Harbor Street, were CC (Community Commercial) District, which allowed for “small recycling facilities” subject to Zoning Administrator approval, and “mail order or direct selling establishments” as permitted uses. Because the current proposal would essentially be reverting back to allowable land uses in place prior to the adoption of the RASP, but under the same General Plan land use designation, it can be concluded that the proposed zoning text amendment would remain consistent with the General Plan.

Staff believes that the City Council can make the necessary findings to approve the proposed amendment to allow small recycling facilities and mail order or direct selling establishments within the M District subject to a use permit and limitation that allows these uses only in that area north of California Avenue and east of Harbor Street, as the amendment would support a community need for continued recycling efforts that would keep items out of the landfill, and would provide resident’s with additional environmentally-beneficial recycling options while supporting the City’s recycling goals by providing new avenues to divert useable items from the waste stream. By requiring a use permit for new establishments, the City would further retain site development and operational controls to ensure that new businesses do not become a nuisance for the surrounding neighbors and the City as a whole.

The City Council of the City of Pittsburgh DOES ORDAIN as follows

SECTION 1. Recitals

- A. This is a proposal initiated by Mt. Diablo Resource Recovery to consider an amendment to Title 18, "Zoning," of the Pittsburgh Municipal Code (PMC) in order to facilitate a small recycling facility and mail order or direct selling in the M (Mixed Use) District, subject to limitations.
- B. On March 5, 2015, a proposal was presented to the Land Use Subcommittee by the applicant to request input on the potential use of the site as a recycling center which would include warehousing of reusable items with a retail component. The Subcommittee concurred with staff's recommended approach that the business owner submit a request for a zoning code amendment to allow a recycling facility ancillary to a secondhand clothing and appliance store within the M District, subject to approval of a use permit. During this meeting the Subcommittee voiced concerns about safety, security, outdoor storage/debris, and noise. Specific recommendations were made to address each of these issues and the applicant was in agreement with all Subcommittee recommendations discussed.
- C. On April 3, 2017, the applicant filed Zoning Text Amendment AP-17-1235 for the project. The project concept was modified from its 2015 iteration to include a "small recycling facility" and "mail order or direct selling establishment" (rather than a "secondhand clothing and appliance store") in order to better match the best fit land use classification as defined in PMC section 18.08.080. The proposal includes a zoning text amendment to allow both uses in the M District, but only in areas north of California Avenue and east of Harbor Street, subject to use permit approval.
- D. On April 10, 2017, the revised concept was presented to the Land Use Subcommittee for consideration. During this meeting, the Subcommittee continued to be supportive of the process as proposed by staff; however, the Subcommittee raised some additional concerns related to grocery carts that could accumulate in the area, scavengers picking through garbage bins in the nearby neighborhoods, and they suggested the zoning text amendment be limited to the commercial areas north of California Avenue east of Harbor Street. The applicant

agreed to suggested operational conditions, including a limit on the days and hours of operation to minimize any nearby scavenging.

- E. On June 13, 2017, the Planning Commission held a public hearing to consider the proposed zoning text amendment related to “small recycling facilities” and “mail order and direct selling” in the M District. Following close of the public hearing, the Planning Commission voted 5-0, with two absent, to recommend City Council approval of the amendment as presented by staff.
- F. On July 17, 2017, the City Council held a public hearing to consider the proposed zoning text amendment. Following close of the public hearing, the City Council voted 2-1 to continue the public hearing to the August 7, 2017, City Council meeting. On August 7, 2017, the item was continued to the August 21, 2017, City Council meeting. On August 21, 2017, the item was continued to a date uncertain to allow the applicant time to meet with the neighbors to address concerns.
- G. On May 8, 2018, the applicant held an informational meeting and invited residents of the neighboring Stone Harbor subdivision to tour the site and discuss the project.
- H. On July 18, 2018, the project was once again brought before the Subcommittee to provide an update on the applicant’s outreach efforts and discuss potential conditions of approval related to the potential use permit application. During this meeting, Councilmembers Craft and Banales, as well as Commissioner Robinson, voiced their concerns regarding noise resulting from the recycling component. The applicant stated that recyclables would be collected in smaller containers within the existing building and proposed that the bins could be taken from the site by bin trucks, which are smaller trucks with a forklift like attachment, which would eliminate much of the noise resulting from recyclable materials being dumped into a standard truck bed. Councilmember Banales recommended a condition be added to address where the trucks would be loaded, and how trucks and other clients would enter the parking area of the facility.
- I. Before adoption of an ordinance, the City Council shall make findings that the proposed regulation is consistent with the policies of the general plan and the notice and hearing provisions of PMC Title 18, in accordance with PMC section 18.48.030.
- J. On or prior to August 10, 2018, notice of the August 20, 2018, public hearing to consider this application was posted at City Hall and on the ‘public notices’ page of the City’s website; was delivered to the Pittsburg Library; was published in the local newspaper (East Contra Costa County Times); and was mailed via first class mail or electronic mail to interested parties and individuals and organizations that requested such notice, in accordance with PMC sections 18.14.010, and Government Code section 65091.
- K. On August 20, 2018, the City Council voted 3-0 to continue this item to the September 4, 2018, City Council meeting.

- L. On September 4, 2018, the City Council held a continued public hearing on the proposed zoning text amendments, at which time oral and/or written testimony was considered.

## SECTION 2. Findings

- A. Based on the City Council Staff Report entitled, "Introduction and Waive First Reading of an Ordinance Amending Title 18 of the Pittsburg Municipal Code as it Relates to Permitting for Small Recycling Facilities and Mail Order or Direct Selling Establishments in the M District, AP 17-1235" and based on all the information contained in the Planning Division files, incorporated herein by reference and available for review in the Planning Division located at 65 Civic Avenue in Pittsburg, and based on all written and oral testimony presented at the meeting, the City Council finds that:
1. All recitals above are true and correct and are incorporated herein by reference.
  2. This project is exempt from the requirements of the California Environmental Quality Act under the general rule of applicability of the state CEQA Guidelines, section 15061, in that there is no possibility that the activity in question would have a significant negative physical impact on the environment. The amendment proposed is procedural in nature and consistent with the General Plan land use designations for the sites in question.
  3. The proposed amendment is consistent with the objectives, policies, general land uses and programs in the General Plan as the new uses are allowable uses within the Mixed Use General Plan land use designation that is applicable to all M District designated sites north of California Avenue and east of Harbor Street.
  4. The proposed land use regulations are compatible with uses and regulations of the land use district for which they are proposed, in that they will provide the community with additional recycling and retail options while still providing site development and operational controls through the use permit process to ensure that new businesses do not become a nuisance for the surrounding neighbors, nor the City as a whole.
  5. There is a community need for the change proposed as the proposed project fulfills the community's need for environmentally beneficial recycling options and keeping usable items out of the landfill, while further promoting the general welfare of the City by supporting the City's recycling goals by diverting useable items from the waste stream.
  6. The change will be in conformity with the public convenience as it would provide residents with additional easily accessible recycling and retail options within the M (Mixed Use) District designated areas located north of California Avenue and east of Harbor Street.

### SECTION 3. Decision.

A. Based on the findings and the authority set forth above, the City Council hereby amends Title 18 of the PMC, as identified below:

1. The schedule in PMC section 18.53.020 is amended to add the following land use category under the “Recycling collection facility” heading, as follows (new text shown with underlines):

|                                  |              |
|----------------------------------|--------------|
| Recycling collection facility    |              |
| Reverse vending machine          | P            |
| <u>Recycling facility, small</u> | <u>L-148</u> |

2. PMC section 18.53.020 “M District – Additional Use Regulations,” Limitation L-148, is amended to read as follows (new text shown with underlines):

“Permitted above ground floor level, except for small recycling facilities. Use permit required for any establishment occupying the ground floor level of a building constructed on a lot with frontage on Railroad Avenue, or California Avenue east of Harbor Street. Otherwise, prohibited.”

### SECTION 4. Severability

If any section, subdivision, sentence, clause, phrase or portion of this Ordinance is for any reason held invalid or unconstitutional by any court of competent jurisdiction, such portion shall be deemed a separate, distinct and independent provision, and such holding shall not affect the validity of the remaining portions thereof.

### SECTION 5. Effective Date

This Ordinance shall be in full force and effective thirty (30) days after its adoption.

### SECTION 6. Publication

The City Clerk shall either (a) have this ordinance published once within 15 days after adoption in a newspaper of general circulation or (b) have a summary of the ordinance published twice in a newspaper of general circulation, once 5 days before its adoption and again 20 days after its adoption.

The foregoing ordinance was introduced at a meeting of the City Council of the City of Pittsburgh held on September 4, 2018, and was adopted and ordered published at a meeting of the City Council held on September 17, 2018, by the following vote:

| Diablo Recycling, AP-17-1235 (RZ)." )        | ) |                      |

The Planning Commission DOES RESOLVE as follows:

### Section 1. Background

- A. On March 5, 2015, a proposal was first presented to the Land Use Subcommittee (LUS) by the applicant to request input on the potential use of the site as a recycling center which would include warehousing of reusable items with a retail component. The subcommittee concurred with staff's recommended approach that the business owner submit a request for a zoning code amendment to allow a recycling facility ancillary to a secondhand clothing and appliance store within the M district, subject to approval of a use permit. During this meeting the subcommittee voiced concerns about safety, security, outdoor storage/debris, and noise. Specific recommendations were made to address each of these issues and the applicant was in agreement with all LUS recommendations discussed.
- B. On April 3, 2017, the applicant filed Zoning Text Amendment and Use Permit Application No.17-1235 for the project. The project concept was modified from its 2015 iteration to include a "small recycling facility" and "mail order or direct selling establishment" (rather than a "secondhand clothing and appliance store") in order to better match the best fit land use classification as defined in the Pittsburgh Municipal Code (PMC) section 18.08.080. The proposal includes a zoning text amendment to allow both uses subject to use permit approval within the existing building, and ancillary to the Pittsburgh Disposal offices.
- C. April 10, 2017, the revised concept was presented to the LUS for consideration. During this meeting the subcommittee continued to be supportive of the process as proposed by staff; however, they raised some additional concerns related to grocery carts that could accumulate in the area, scavengers picking through garbage bins in the nearby neighborhoods, and they suggested the zoning text amendments be limited to the commercial areas north of California Avenue east of Harbor Street. The applicant again agreed to suggested operational conditions, including a limit on the days and hours of operation to minimize any nearby scavenging.

- D. The proposed project is governed by the policies and development standards in the Pittsburg General Plan, Railroad Avenue Specific Plan (RASP), and Pittsburg Municipal Code (PMC).
- E. This project is exempt from the requirements of the California Environmental Quality Act under the general rule of applicability of the state CEQA Guidelines, section 15061, in that there is no possibility that the activity in question would have a significant negative physical impact on the environment. The amendments proposed are procedural in nature and consistent with the General Plan land use designations for the sites in question.
- F. On or prior to June 3, 2017, notice of the June 13, 2017 public hearing to consider this application was posted at City Hall and on the 'public notices' page of the City's website; was delivered to the Pittsburg Library; was published in the local newspaper (East County Times) as a 1/8 page advertisement; and was mailed via first class mail or email to the property owner, all property owners within 300 feet of the project area, and all interested parties and individuals and organizations that requested such notice, in accordance with PMC sections 18.14.010, and Government Code section 65091.
- G. Pittsburg Municipal Code (PMC) section 18.48.030.A specifies that the following determinations must be made in order to recommend approval of an amendment to the Zoning Ordinance:
  - 1. the amendment is consistent with the objectives, policies, general land uses and programs in the General Plan;
  - 2. the land use regulation is compatible with uses and regulations of the land use district for which it is proposed;
  - 3. there is a community need for the change proposed; and
  - 4. the change will be in conformity with the public convenience, general welfare, and good zoning practice.
- H. On June 13, 2017, the Planning Commission held a public hearing on Planning Application No. 17-1235, at which time oral and/or written testimony was considered.

## Section 2. Findings

- A. Based on the Planning Commission Staff Report entitled "Recommendation on a Zoning Text Amendment for Pittsburg Disposal / Mt. Diablo Resource Recovery Park, AP-17-1235 (RZ)," and based on all the information contained in the Planning Division files on the project, incorporated herein by reference and available for review in the Planning Division located at 65 Civic Avenue in Pittsburg, and based

on all written and oral testimony presented at the meeting, the Planning Commission finds that:

1. All recitals above are true and correct and are incorporated herein by reference.
2. The proposed amendment is consistent with the objectives, policies, general land uses and programs in the General Plan as the new uses are allowable uses within the *Community Commercial* General Plan land use designation that is applicable to all M District designated sites north of California Avenue and east of Harbor Street.
3. The proposed land use regulations are compatible with uses and regulations of the land use district for which they are proposed, in that they would provide the community with additional recycling and retail options while still providing site development and operational controls through the use permit process to ensure that new businesses do not become a nuisance for the surrounding neighbors, nor the City as a whole
4. There is a community need for the change proposed as the proposed project fulfills the community's need for environmentally beneficial recycling options and keeping usable items out of the landfill, while further promoting the general welfare of the City by supporting the City's reuse, redeem and recycle goals by diverting useable items from the waste stream.
5. The change will be in conformity with the public convenience as it would provide residents with additional easily accessible recycling and retail options within the M District designated areas located north of California Avenue and east of Harbor Street.

### Section 3. Decision

- A. Based on the findings and the authority set forth above, the Planning Commission hereby recommends that the City Council adopt an ordinance amending PMC section 18.53.020 "Land use and development regulations," as identified below:
  1. The schedule in PMC section 18.53.020 is amended to add the following land use category under the "Recycling collection facility" heading, as follows (new text shown with underlines):

|                                  |              |
|----------------------------------|--------------|
| Recycling collection facility    |              |
| Reverse vending machine          | P            |
| <u>Recycling facility, small</u> | <u>L-148</u> |

Small Recycling Facility on the north side of California Avenue and east of Harbor Street, allowed with a use permit

2. PMC section 18.53.020 "M District – Additional Use Regulations," Limitation L-148 is amended to read as follows (new text shown with underlines):

Permitted above ground floor level. Use permit required for an establishment occupying the ground floor level of a building constructed on a lot with frontage on Railroad Avenue, or California Avenue east of Harbor Street. Otherwise, prohibited.

#### Section 4. Effective Date

This resolution shall take effect immediately upon its adoption.

On motion by Commissioner Croskey, seconded by Commissioner Foster, the foregoing resolution was passed and adopted the 13<sup>th</sup> day of June 2017, by the Planning Commission of the City of Pittsburg, California by the following vote:

AYES: Coniglio, Croskey, Foster, Gargalikis, Guerrero

NAYES: None

ABSTAIN: None

ABSENT: Patrice Belleci-Shipe, Fardella

I hereby certify that the above Resolution No. 10064 was adopted by the Planning Commission of the city of Pittsburg on June 13, 2017.

HECTOR ROJAS, AICP, ACTING SECRETARY  
PITTSBURG PLANNING COMMISSION

**Attachment 3**  
**Selected Draft Use Permit Conditions of Approval**

*Recycle Smart and Buyback Use Permit Conditions*

1. The small recycling facility shall accept only glass, aluminum cans, plastic containers, papers and reusable items.
2. The small recycling facility shall not use power-driven processing equipment.
3. The small recycling facility shall be located within the existing building. No outdoor operations, including but not limited to outside storage or sorting of materials, shall be allowed.
4. The recycle buyback operations shall occur entirely within the existing building.
5. Only smaller containers that can be removed by a bin truck shall be used to collect and store recyclable materials.
6. All containers used as part of the small recycling facility buyback program shall be picked up within the existing building using bin trucks.
7. All vehicles, including trucks owned by the business operator, shall enter the site from the driveway off of Newport Drive. The gate along California Avenue shall be designated as exit only. The business operator shall make all reasonable efforts to ensure that vehicles exiting the site do not block California Avenue or the adjacent sidewalk.
8. Customer parking shall be limited to those spaces along the western property boundary and those spaces east of the existing security gate along the north side of the existing building. All spaces adjacent to the northern property line west of the existing gate along the north side of the building shall be reserved for employee parking.
9. Storage bins utilized as part of the buyback program shall be removed and replaced a minimum of once per week, or as needed when filled to capacity. This shall not be construed as to require empty, clean bins be removed.
10. The business operator shall maintain service with a private pest control company at all times.
11. Public business hours shall be limited to the hours of 9:00 a.m. and 3:00 p.m. (maximum hours) during weekdays only. The small recycling buy-back facility shall be closed on the day the surrounding Stone Harbor neighborhood trash collection occurs.
12. Loading and delivery of materials shall be limited to the hours of 7:00 a.m. to 5:00 p.m. weekdays and Saturday.
13. It shall be the business owner's responsibility to ensure that all possible measures are taken to avoid large trucks on site outside of 8:00 a.m. to 5:00 pm.
14. The business operator shall ensure no idling of trucks takes place on the premises.
15. The facility may not exceed noise levels of 60 dBA as measured at the property line of residentially zoned or occupied property, or otherwise not exceed 70 dBA.

16. The business operator shall be required to refuse accepting any materials brought to the site via shopping carts. The business operator shall maintain signage, approved by the Planning Division and subject to all requirements of Title 19 of the PMC, at both entry gates stating: "No Grocery Carts Allowed on Premises."
17. The business operator shall install and maintain signage within the existing pylon sign, approved by the Planning Division and subject to all requirements of Title 19 of the PMC.
18. The developer shall provide permanent, fixed bicycle racks or lockers for 8 bicycles. The final design and location of the bicycle racks shall be subject to approval by the Planning Division.
19. The developer shall plant a minimum of one (1) tree at the project entry off of Newport Drive within island between parking and entry. The tree species shall be selected for energy efficiency and drought tolerance, and adaptability and relationship to the city's climatic, soil, geological and topographical conditions.
20. The developer shall repair sections of missing gate lattice on existing trash structure.
21. The developer shall repair and finish (to match existing) chipped or broken portions of sound wall bordering Stone Harbor subdivision.
22. The site shall be kept clean and free of all litter, debris and refuse, and all landscaping on site shall be kept weed free and maintained in a healthy condition.
23. There shall be no outdoor display or storage of any kind.
24. The business owner shall ensure that items offered for sale do not spill or leak oil or other hazardous contaminants. The business operator shall ensure that accidental spills or leaks of oil or other hazardous contaminants are immediately cleaned using dry cleanup methods.
25. The business owner shall work with a City-approved theft prevention specialist to help identify and reject stolen goods. The operator shall work with the Police Department to the maximum extent feasible to report stolen items.

*Railroad Avenue Specific Plan Community Facilities District:*

26. If not already completed, the property owner shall deliver written approval in a manner acceptable to the Community Development Director, that the owner of the parcel is electing to annex the subject property into the 2014-01 Railroad Avenue Specific Plan Area Community Facilities District (CFD 2014-1), prior to operation of the small recycling facility.

**CITY OF PITTSBURG  
PLANNING COMMISSION  
STAFF REPORT**

**ITEM: No. 3 – Recommendation on a Zoning Text Amendment for Pittsburg  
Disposal / Mt. Diablo Resource Recovery Park, AP-17-1235 (RZ)**

ORIGINATED BY: Robert Hammonds, Mt. Diablo Recycling - Garaventa Properties,  
PO Box 5397, Concord, CA, 94520

SUBJECT: This is a public hearing on a request for a recommendation for City Council approval of a zoning text amendment to facilitate implementation of the Recycle Smart Program within the existing building located at 555 California Avenue in the M (Mixed Use) District, for Pittsburg Disposal / Mt. Diablo Recycling; APN 073-270-089. While the purpose of this request is to facilitate a specific development proposal, the zoning text amendments would apply to the entire M District, with limitations.

RECOMMENDATION:

Staff recommends that the Commission adopt Resolution No. 10064, recommending that the City Council approve an amendment to Title 18 of the Pittsburg Municipal Code as it relates to small recycling facilities and mail order or direct selling establishments in the Mixed Use District, as presented.

BACKGROUND:

The primary project site at 555 California Avenue was constructed in 1994 and is the former location of Wonder Bread and California Carpets. The site was vacated in 2012. Attachment 2 of this report includes a map showing the existing surrounding uses.

On March 5, 2015, a proposal was first presented to the Land Use Subcommittee (LUS) by the applicant to request input on the potential use of the site as a recycling center which would include warehousing of reusable items with a retail component. The subcommittee concurred with staff's recommended approach that the business owner submit a request for a zoning code amendment to allow a recycling facility ancillary to a secondhand clothing and appliance store within the M district, subject to approval of a use permit. During this meeting the subcommittee voiced concerns about safety, security, outdoor storage/debris, and noise. Specific recommendations were made to address each of these issues and the applicant was in agreement with all LUS recommendations discussed (see Attachment 3 of this report for a full list of the draft use permit conditions, which would be subject to formal review at a later date).

On April 3, 2017, the applicant filed Zoning Text Amendment and Use Permit Application No.17-1235 for the project, as presented below. The project concept was modified from its 2015 iteration to include a "small recycling facility" and "mail order or direct selling establishment" (rather than a "secondhand clothing and appliance store") in order to better match the best fit land use classification as defined in the Pittsburg

## Planning Commission Staff Report

Municipal Code (PMC) section 18.08.080. The proposal includes a zoning text amendment to allow both uses subject to use permit approval within the existing building, and ancillary to the Pittsburg Disposal offices.

April 10, 2017, the revised concept was presented to the LUS for consideration. During this meeting the subcommittee continued to be supportive of the process as proposed by staff; however, they raised some additional concerns related to grocery carts that could accumulate in the area, scavengers picking through garbage bins in the nearby neighborhoods, and they suggested the zoning text amendments be limited to the commercial areas north of California Avenue east of Harbor Street. The applicant again agreed to suggested operational conditions, including a limit on the days and hours of operation to minimize any nearby scavenging (see Attachment 3). At the conclusion of the LUS meeting, the subcommittee recommended that the zoning text amendment be taken to Planning Commission and then to the City Council for review, as appropriate.

### PROJECT DESCRIPTION:

The applicant has proposed a zoning text amendment to facilitate a “small recycling facility” and “mail order or direct selling establishment” (as defined by PMC sections 18.08.080.24.B and 18.08.080.26.E, respectively), auxiliary to the Pittsburg Disposal Offices. This project requires amending the M District’s land use and development regulations (PMC section 18.53.020) to include and designate the two use classifications, which are required for the implementation of the Recycle Smart Program ancillary to the Pittsburg Disposal Office, upon approval of a conditional use permit.

As proposed, “small recycling facilities” and “mail order or direct selling establishments” would be allowed on M District parcels located north of California Avenue and east of Harbor Street, subject to approval of a use permit.

Details related to the site specific development proposal at 555 California Avenue have been submitted by the applicant and are attached to this report for information purposes only (see Attachment 4 - 555 California Avenue Proposal). Upon City Council approval of the requested zoning text amendment, a use permit application would be processed and reviewed by the Planning Commission for use of the specific site, as presented in Attachment 4.

### GENERAL PLAN/CODE COMPLIANCE:

General Plan / Railroad Avenue Specific Plan: On November 2, 2009, the Pittsburg City Council adopted the Railroad Avenue Specific Plan (RASP) Ordinance No. 09-1309 and Resolution 09-11303, which designated the project site as Transit Oriented Development (TOD) Medium. Allowable land uses in TOD Medium and TOD High Districts are the same as those of the M (Mixed Use) District as specified in Title 18 of the PMC.

The Mixed Use designation was established to allow for greater flexibility of land uses around and accessible by transit (General Plan, page 2-18). The RASP boundaries encompasses a half-mile radius around the new Pittsburg Center BART Station (currently under construction), and the project site is within these boundaries, but located very near the edge of the RASP's half-mile border.

Prior to the adoption of the RASP, the General Plan and zoning designations for all of the currently designated M District parcels located along California Avenue east of Harbor Street, was Community Commercial (refer to Attachment 5 - Railroad Avenue Specific Plan and PMC sections) which allowed for "Small Recycling Facilities" subject to zoning administrator approval, and "Mail Order or Direct Selling Establishments" as permitted uses.

Because the current proposal would essentially be reverting back to allowable land uses in place prior to the adoption of the RASP, but under the same General Plan land use designation, it can be concluded that the proposed zoning text amendment would remain consistent with the General Plan.

Zoning: Pursuant to PMC sections 18.16.020 and 18.48.030, the Planning Commission shall include written findings to support any recommendation it makes to the City Council to amend the Municipal Code.

Required Findings: In order to recommend approval of an amendment to the Zoning Ordinance, the Commission must find (in accordance with PMC Section 18.48.030) that:

1. The changes proposed are consistent with the objectives, policies, general land uses and programs specified in the General Plan.
2. In the case of a base district, the change proposed is compatible with the uses authorized in, and the regulations prescribed for, the land use district for which it is proposed.
3. A community need is demonstrated for the change proposed.
4. Its adoption will be in conformity with public convenience, general welfare and good zoning practice.

Environmental: This project is exempt from the requirements of the California Environmental Quality Act under the general rule of applicability of the state CEQA Guidelines, section 15061, in that there is no possibility that the activity in question would have a significant negative physical impact on the environment. The amendments proposed are procedural in nature and consistent with the General Plan land use designations for the sites in question.

## Planning Commission Staff Report

Public Notice: On or prior to June 3, 2017, notice of the June 13, 2017 public hearing to consider this application was posted at City Hall and on the 'public notices' page of the City's website; was delivered to the Pittsburg Library; was published in the local newspaper (East County Times) as a 1/8 page advertisement; and was mailed via first class mail or email to the property owner, all property owners within 300 feet of the project area, and all interested parties and individuals and organizations that requested such notice, in accordance with PMC sections 18.14.010, and Government Code section 65091.

### ANALYSIS:

Staff believes that the Commission can make the necessary findings to recommend approval of the proposed amendment to the M District in order to revise the existing Land Use Regulations table to allow small recycling facilities and mail order or direct selling establishments on M District parcels located north of California Avenue and east of Harbor Street, subject to approval of a use permit.

The amendment would support a community need for continued recycling efforts that will keep items out of the landfill. The proposed amendments would also provide resident's with additional environmentally-beneficial recycling options while supporting the City's reuse, redeem and recycle goals by providing new avenues to divert useable items from the waste stream.

By requiring a use permit for new establishments and limiting the locations to M District areas north of California Avenue and east of Harbor Street, the City will further retain site development and operational controls to ensure that new businesses do not become a nuisance for the surrounding neighbors and the City as a whole.

### ACTION REQUIRED:

Move to adopt Resolution No. 10064, recommending City Council approval of an amendment to Title 18 of the Pittsburg Municipal Code as it relates to small recycling facilities and mail order or direct selling establishments in the Mixed Use District, as presented.

The Planning Commission DOES RESOLVE as follows:

Section 1. Background

- A. On March 5, 2015, a proposal was first presented to the Land Use Subcommittee (LUS) by the applicant to request input on the potential use of the site as a recycling center which would include warehousing of reusable items with a retail component. The subcommittee concurred with staff's recommended approach that the business owner submit a request for a zoning code amendment to allow a recycling facility ancillary to a secondhand clothing and appliance store within the M district, subject to approval of a use permit. During this meeting the subcommittee voiced concerns about safety, security, outdoor storage/debris, and noise. Specific recommendations were made to address each of these issues and the applicant was in agreement with all LUS recommendations discussed.
  
- B. On April 3, 2017, the applicant filed Zoning Text Amendment and Use Permit Application No.17-1235 for the project. The project concept was modified from its 2015 iteration to include a "small recycling facility" and "mail order or direct selling establishment" (rather than a "secondhand clothing and appliance store") in order to better match the best fit land use classification as defined in the Pittsburg Municipal Code (PMC) section 18.08.080. The proposal includes a zoning text amendment to allow both uses subject to use permit approval within the existing building, and ancillary to the Pittsburg Disposal offices.
  
- C. April 10, 2017, the revised concept was presented to the LUS for consideration. During this meeting the subcommittee continued to be supportive of the process as proposed by staff; however, they raised some additional concerns related to grocery carts that could accumulate in the area, scavengers picking through garbage bins in the nearby neighborhoods, and they suggested the zoning text amendments be limited to the commercial areas north of California Avenue east of Harbor Street. The applicant again agreed to suggested operational conditions, including a limit on the days and hours of operation to minimize any nearby scavenging.

- D. The proposed project is governed by the policies and development standards in the Pittsburg General Plan, Railroad Avenue Specific Plan (RASP), and Pittsburg Municipal Code (PMC).
- E. This project is exempt from the requirements of the California Environmental Quality Act under the general rule of applicability of the state CEQA Guidelines, section 15061, in that there is no possibility that the activity in question would have a significant negative physical impact on the environment. The amendments proposed are procedural in nature and consistent with the General Plan land use designations for the sites in question.
- F. On or prior to June 3, 2017, notice of the June 13, 2017 public hearing to consider this application was posted at City Hall and on the 'public notices' page of the City's website; was delivered to the Pittsburg Library; was published in the local newspaper (East County Times) as a 1/8 page advertisement; and was mailed via first class mail or email to the property owner, all property owners within 300 feet of the project area, and all interested parties and individuals and organizations that requested such notice, in accordance with PMC sections 18.14.010, and Government Code section 65091.
- G. Pittsburg Municipal Code (PMC) section 18.48.030.A specifies that the following determinations must be made in order to recommend approval of an amendment to the Zoning Ordinance:
  - 1. the amendment is consistent with the objectives, policies, general land uses and programs in the General Plan;
  - 2. the land use regulation is compatible with uses and regulations of the land use district for which it is proposed;
  - 3. there is a community need for the change proposed; and
  - 4. the change will be in conformity with the public convenience, general welfare, and good zoning practice.
- H. On June 13, 2017, the Planning Commission held a public hearing on Planning Application No. 17-1235, at which time oral and/or written testimony was considered.

## Section 2. Findings

- A. Based on the Planning Commission Staff Report entitled "Recommendation on a Zoning Text Amendment for Pittsburg Disposal / Mt. Diablo Resource Recovery Park, AP-17-1235 (RZ)," and based on all the information contained in the Planning Division files on the project, incorporated herein by reference and available for review in the Planning Division located at 65 Civic Avenue in Pittsburg, and based

on all written and oral testimony presented at the meeting, the Planning Commission finds that:

1. All recitals above are true and correct and are incorporated herein by reference.
2. The proposed amendment is consistent with the objectives, policies, general land uses and programs in the General Plan as the new uses are allowable uses within the *Community Commercial* General Plan land use designation that is applicable to all M District designated sites north of California Avenue and east of Harbor Street.
3. The proposed land use regulations are compatible with uses and regulations of the land use district for which they are proposed, in that they would provide the community with additional recycling and retail options while still providing site development and operational controls through the use permit process to ensure that new businesses do not become a nuisance for the surrounding neighbors, nor the City as a whole.
4. There is a community need for the change proposed as the proposed project fulfills the community's need for environmentally beneficial recycling options and keeping usable items out of the landfill, while further promoting the general welfare of the City by supporting the City's reuse, redeem and recycle goals by diverting useable items from the waste stream.
5. The change will be in conformity with the public convenience as it would provide residents with additional easily accessible recycling and retail options within the M District designated areas located north of California Avenue and east of Harbor Street.

### Section 3. Decision

- A. Based on the findings and the authority set forth above, the Planning Commission hereby recommends that the City Council adopt an ordinance amending PMC section 18.53.020 "Land use and development regulations," as identified below:
1. The schedule in PMC section 18.53.020 is amended to add the following land use category under the "Recycling collection facility" heading, as follows (new text shown with underlines):

|                                  |              |
|----------------------------------|--------------|
| Recycling collection facility    |              |
| Reverse vending machine          | P            |
| <u>Recycling facility, small</u> | <u>L-148</u> |

Small Recycling Facility on the north side of California Avenue and east of Harbor Street, allowed with a use permit

2. PMC section 18.53.020 “M District – Additional Use Regulations,” Limitation L-148 is amended to read as follows (new text shown with underlines):

Permitted above ground floor level. Use permit required for an establishment occupying the ground floor level of a building constructed on a lot with frontage on Railroad Avenue, or California Avenue east of Harbor Street. Otherwise, prohibited.

Section 4. Effective Date

This resolution shall take effect immediately upon its adoption.

On motion by Commissioner , seconded by Commissioner \_\_\_\_\_, the foregoing resolution was passed and adopted the 13<sup>th</sup> day of June, 2017, by the Planning Commission of the City of Pittsburg, California by the following vote:

AYES:

NAYES:

ABSTAIN:

ABSENT:

I hereby certify that the above Resolution No. 10064 was adopted by the Planning Commission of the city of Pittsburg on June 13, 2017.

**Surrounding Uses**

Pittsburg Disposal / Mt Diablo Recycling, AP-17-1235 (Zoning Text Amendment)

**Project Site**

## **Attachment 3Draft Use Permit Conditions of Approval**

### *Standard Conditions*

1. **Sales Tax:** The applicant or their subcontractor(s) shall record with the California Board of Equalization a nexus or additional location within the City of Pittsburg to ensure any and all sales tax paid shall be recorded and paid to the City of Pittsburg. Applicant or subcontractors shall add a new location to an existing account or ensure the seller of goods and materials subject to sales tax have registered a location within the City of Pittsburg with the Board of Equalization.
2. **Standard Conditions of Development:** The Standard Conditions of Development as adopted by the Pittsburg Planning Commission by Resolution No. 8931 shall apply as conditions of approval for this project as applicable. Where there is a conflict between the Standard Conditions of Development and the project-specific conditions identified in this resolution, the specific conditions of this resolution shall govern.
3. **Other Agency Requirements:** The applicant shall comply with all the requirements of the City's Community Development Department, Contra Costa County Fire Protection District, and all other applicable local, state and federal agencies. It is the responsibility of the applicant to contact each local, state, or federal agency for requirements that may pertain to this project.
4. **Indemnification:** Applicant agrees to indemnify, defend, and hold harmless the City, its officials, officers, employees, agents and consultants from any and all administrative, legal or equitable actions or other proceedings instituted by any person challenging the validity of this project approval, subsequent project approval, or other action arising out of, or in connection with, this project approval. The parties shall cooperate in defending such action or proceeding. The parties shall use reasonable efforts to select mutually agreeable defense counsel but, if the parties cannot reach agreement, City may select its own legal counsel at applicant's sole cost and expense. Applicant may select its own legal counsel to represent applicant's interests at applicant's sole cost and expense. Applicant shall pay for City's costs of defense, whether directly or by timely reimbursement to City on a monthly basis. Such costs shall include, but not be limited to, all court costs and attorneys' fees expended by City in defense of any such action or other proceeding, plus staff and City Attorney time spent responding to and defending the claim, action or proceeding.

### *Recycle smart and Buyback Use Permit Conditions*

5. The small recycling facility may accept only glass, aluminum cans, plastic containers, papers and reusable items.

6. The small recycling facility may not use power-driven processing equipment.
7. The small recycling facility must be located in the existing building a minimum of 20 feet from the California Avenue Sidewalk.
8. The project shall be:  
500 SF maximum area small recycling facility  
1,805 SF maximum Retail Secondhand Sales area
9. No outside storage or sorting of materials is allowed.
10. Recycling Buy-back shall be closed on the day the surrounding neighborhood trash and collection occurs.
11. Public business hours shall be 9:00 a.m. to 5:00 p.m. (maximum hours) weekdays.
12. Loading and delivery of materials shall be prohibited outside of hours 7:00 a.m. to 5:00 p.m. weekdays and Saturday.
13. It shall be the business owner's responsibility to ensure that all possible measures are taken to avoid large trucks on site outside of 8:00a.m to 5:00 pm.
14. No idling of trucks onsite is allowed.
15. The facility may not exceed noise levels of 60 dBA as measured at the property line of residentially zoned or occupied property, or otherwise not exceed 70 dBA.
16. No vehicle traffic is allowed to block California Avenue.
17. Signage shall be submitted for review and approval:
  - a. No Grocery Carts allowed on premises
  - b. gate at California Avenue: NO PUBLIC ENTRY
  - c. gate to rear of building off Newport Drive: NO PUBLIC ENTRY
  - d. existing pylon sign
18. Add Permanent, fixed bicycle racks or lockers for 8 bicycles.
19. Plant one (1) tree minimum at project entry off Newport Drive in island between parking and entry. The tree species shall be selected for energy efficiency and drought tolerance, and adaptability and relationship to the city's climatic, soil, geological and topographical conditions.
20. Repair sections of missing gate lattice on existing trash structure.
21. Repair, and finish (match existing) chipped or broken portions of sound wall bordering Stone Harbor subdivision.

22. The site shall be kept clean and free of all litter, debris and refuse, and all landscaping on site shall be kept weed free and maintained in a healthy condition.

*Railroad Avenue Specific Plan Community Facilities District:*

23. The subject property has been previously annexed into the Railroad Avenue Specific Plan (RASP) Community Facilities District 2014-1, The rate of the CFD is subject to City Council Ordinance No. 14-1383, if applicable.

## Attachment 4:555 California Avenue Proposal

### 1. SITE PLAN (N

ode)

The project is gated to prohibit public entry to the employee and truck delivery area (shown as 2 red lines on the plan). The access to the public is the front doors. Within the gated area, only vehicular traffic relating to the Recycle Smart program implantation and occasional escorted recycle buy-back patrons.

## 2. PROJECT PLAN

20,008 SF Building Constructed in 1994. 1,659 SF is for Pittsburg Disposal offices; 16,044 SF Main Warehouse area used as receiving and sorting re-use items; 500 SF recycling and buy-back area (Maximum allowed for small recycling facility); and 1,805 SF is offices and showroom for public sales of reuse items (10% max of area per ordinance) ancillary to Pittsburg Disposal Services

### 3. PHOTOS

Looking northwest across California Avenue and Newport Drive to project site

**SIGNAGE:** The only signage currently planned will be on the building main entry doors on the east side which will received vinyl window signage on the glass door identical to that of the 981 Railroad Ave office (Pittsburg Disposal) along with the standard ADA parking warning signage. No Plans have been received regarding the building's existing pylon sign.

Photo 2 Looking north towards across Newport Drive at project entry and Stone Harbour Residential Subdivision

Photo 3 Looking west at gated access and wall along Stone Harbour residential to north

Photo 4 looking easterly along California Avenue.

#### **4. Site Operations Information**

The proposed project utilizes an existing building and parking plan constructed in 1993. The building's primary use is now Pittsburg Disposal office, which is an allowable use. In addition to the Pittsburg Disposal Offices, a recycling buy-Back and direct and online sales are proposed:

##### **A. Mt Diablo Recycling buy-back:**

The proposed 500 SF Mt Diablo Buy-Back recycling consists of an area inside the southwestern end of the building, where recycling bins and a small scale would be located.

**Odor:** Recyclable material inside the building would be moved out daily to control any odor issues.

**Noise:** There would be no outside storage and trucks would be stored at the Loveridge Road facility. Noise levels would not exceed 60 decibels.

**Expected walk-in volume:** Due to the current low price of the recycled materials market, the initial customer-per-day count (both walk-in and drive in) will likely be low; likely no more than a few per day. Should recycling material prices rise in the future, the customer count could be as much as 20 to 30 per day.

**Operating Hours:** The operating hours are specifically defined in the City's Recycling Collections Facility Conditions PMC 18.84.575, Proposed facility to be open M-F 9am – 3:30pm. It should be noted that Mt. Diablo Recycling is proposing an additional condition whereby the buy-back operations would remain closed on the day the surrounding neighborhood trash and recycling collections occurs (included in Conditions).

**Recycled materials bin pick up:** Weekly to start, more often should demand increase.

**Hours of workers and trucks outside normal business hours:** Infrequently a recycling container service pick up may be scheduled outside of normal business hours. Typically, the recycling container pickups would occur during the same service schedule as the curbside recycling services for the adjacent neighborhood.

**California Avenue Gate operation:** This gate will remain closed, and will be opened as necessary for receiving re-use delivery items.

**Circulation of traffic:** All customer traffic would enter and exit the eastern driveway off of Newport Street.

**Bin Sizes:** PCM 18.84.575 Sets criteria and standards for Small Recycling Facility

The containers used would be 2 – 3 yard bins. This facility will not be accepting recycled motor oil at this location.

**Recycle bins** No Bins will be outside the building. Bins will be on wheels. Staff will push the recycling container to where the recycling truck will empty it and return it to inside the warehouse.

**How many employees?** Up to nine (9) onsite

**Recycling buy-back access:** The overhead (rollup) doors at the truck dock and one of the two doors on the west would be open during normal business hours as necessary to receive re-use material or for access to bring the recycling containers to and from the recycling truck..

**Foot versus auto traffic expectation:** 75% cars and 25% pedestrian.

**Grocery cart full of recyclables discouraged:** No purchases of recycling materials from anyone utilizing stolen shopping carts to transport recycling materials and all customers will be required to provide a valid Driver's License or ID"

**Facility is closed on days when recyclables are picked up in adjacent areas** The Buy Back would not be open on the same day as the local neighbor trash and recycling collection occurs.

**Loveridge facility closure to the public:** The recycling facility at Loveridge Rd has been closed due to the concerns of public safety within the high truck traffic areas on site.

**Buy-back safety:** Payment for recycled materials will be accessed only from within the building's main lobby and payments will only be issued from the secured pay windows. Access through the gates to the buy-back recycling area will be by staff direction.

#### **B. Mail Order and Direct Selling Use:**

The proposed direct selling Use is an 1805 SF (meeting the 10% allowed) area of enclosed warehouse on the eastern end of the building which will have display tables. It includes 2 new offices for the sales person who handles the E-sales and future walk-in customers, and one for the warehouse manager. Also included are 2 restrooms and a break room that serve only the Mt Diablo Recycling staff (non-public area).

Mt. Diablo Recycling, working in partnership with Recycle Smart, Republic Services and the Contra Costa County Solid Waste Authority operates the Re-Use program whereby reusable items destined for the landfill are collected, transported, sorted and redistributed. These re-usable items include household electronics and appliances, gardening and outdoor sporting equipment, furniture, home décor and accessories, clothing, shoes, books, toys, office and school supplies.

The main focus and intent of the Re-Use program is to provide as many non-profit charitable programs and organizations with free access to these re-use items as possible with the co-objective of reducing and redirecting as many of these re-use items

from winding up in the local landfills as possible. The ability to sell those re-use items (which are not claimed by the non-profit organizations) to the local community would provide low cost access of these items to the local community, while further promoting waste diversion goals. In addition to the local retail sales, internet marketing such as E-Bay and Craigslist assist in broadening the area of marketing to the public. In the future, as the more re-use items that can be diverted from the landfill, the more successful this re-use program will be.

The majority of these reusable items are given directly to charitable organizations such as St. Vincent DePaul, Good Will Industries, and many other donation oriented charitable organizations. Through this programs re-use operations, in fiscal year 2016, more than 1,100 tons of re-use items were successful diverted from the local landfill.

The intent of the Mt. Diablo Re-Use Retail store will be to provide the local community (as well as internet sales) the opportunity to purchase those reusable items which have not been claimed by the other non-profit charities. Proceeds from the sale of these items will help to defray some of the cost of operations as well continuing to support Opportunity Junction and its job skills assistance programs.

The current office at 981 Railroad Ave (approx. 1,157 SF office) serves strictly as the business office for Pittsburg Disposal Service and has not been utilized for retail sales.

**Operation hours:** Proposed 7:00 am to 3:30 pm Mon thru Fri for receiving and shipping of re-use items; 9:00 am to 3:30 pm for the retail sales of re-use items.

## 5. Recycle Smart Brochure

**The RecycleSmart  
REUSE PROGRAM**  
Items Go to Local Non-Profits

**Acceptable items for collection**  
*(For State reporting purposes please put your name on all TV's and computer screens.)*

- Household Electronics & Appliances
- Home Decor & Accessories
- Office & School Supplies
- Garden, Outdoor & Sporting Equipment
- Gently-Used Furniture
- Clothes & Shoes

Materials**

**What is a 'Clean-Up Day'?**  
The Clean-Up Day is a day when you can get rid of any items that are not wanted in your home. It is a day to clean up your home and get rid of items that are not wanted in your home. It is a day to clean up your home and get rid of items that are not wanted in your home.

**What do I need to bring?**  
• Place items at the curb by 6 a.m. on your Clean-Up Day. (Please do not place items on the street or in the yard.)  
• Cut and tie larger items (e.g., lawnmowers, etc.) into 4-foot or less in length.  
• Maximum clean-up volume is 32-gallon bags.  
• Items that are broken or damaged should be placed in a separate bag or container.

**What items are NOT acceptable?**  
• Household Hazardous Waste  
• Recyclables  
• Appliances  
• Large Car Parts or Large Furniture  
• Mattresses  
• Tree Stumps or Large Tree Trunks  
• Rocks, Dirt or Concrete

Please do not place clean-up items near or in front of garbage cans.

**Clean-Up Day questions?**

## Attachment 5 Railroad Avenue Specific Plan and PMC Sections

Figure 2.1 General Plan Land Use Map

1. **Figure 2.1 Railroad Avenue Specific Plan (RASP)** depicts the General Plan land use designations prior to the adoption of the RASP. The project site was designated Community Commercial.

18.52.005.B.3 Community Commercial District (CC). To provide for commercial centers and individual structures on sites that are located within reasonable distance of high densities of residences or that are served by local and regional transportation and transit systems. These sites typically host a wide variety of local- and regional-serving commercial establishments, including businesses selling home furnishings, apparel, durable goods, and specialty items. Support facilities such as personal services, entertainment, eating-and-drinking establishments and institutional uses are also allowed, subject to certain limitations to avoid adverse effects on adjacent uses;

A Small Recycling facility is an allowed with a Use Permit, Zoning Administrator in the CC District. A Mail order or direct selling establishment is a permitted use in the CC District

While the previous businesses at 555 California did not did not have a small recycling facility, California Carpets and Wonder Bread did have a retail element of new goods.

Figure 4.5 Land Use Plan with Sub-area Boundaries

**2. Railroad Avenue Specific Plan** Figure 4.5 Shows the project site located in the Transit Oriented Development (TOD) Medium district. Allowable land uses in TOD Medium District are the same as those of the M (Mixed Use) District as specified in Title 18 of the PMC. The Mixed Use land designation is established to allow for greater flexibility of land uses around and accessible by transit. (General Plan, page 2-18).

The goals of the TOD District is to create a vibrant, mixed-use, transit-oriented development district nearest the eBART Station; foster an engaging and active street environment; provide additional housing opportunities, including multifamily and affordable housing, within one-half mile of the eBART Station; and provide services and amenities that meet the needs of transit riders, local residents, employees, students and visitors such as childcare, education and job skills services, community centers, healthcare services, and neighborhood serving retail in close proximity to the eBART Station.

This project is a reuse, restore and renovate project of an existing vacant structure built in the early 90's.

### **3. PCM SECTIONS (REFERENCE)**

#### **Chapter 8.06 COLLECTION OF RECYCLABLE WASTE MATERIALS<sup>1</sup>**

##### **8.06.010 Findings and purpose.**

A. Existing landfill space for the disposal of municipal solid waste is rapidly diminishing. The California Integrated Solid Waste Management Act now mandates 25 percent landfill diversion by 1995 and 50 percent landfill diversion by the year 2000. (Public Resources Code Section 41780). The recycling of recyclable materials will help postpone the need for new landfill capacity, help the city meet its mandatory landfill diversion quotas and also reduce pollution and loss of resources which occurs when perfectly usable materials are discarded.

##### **8.06.030 Definitions *(select)***

"Recyclables" do not include household hazardous waste as defined by PMC [18.84.297](#), or refuse as defined by PMC [8.04.030](#).

"Recycle" or "recycling" means the process of separating and collecting used materials which would otherwise become solid waste, for the purpose of reprocessing them to create new materials to be returned to the economic mainstream.

"Recycling collection facility" means a center for the acceptance by donation, redemption, or purchase of recyclable waste materials from the public and includes the facilities regulated by Chapter [18.84](#) PMC.

##### **18.06.215 Collection facility.**

"Collection facility" is a building, structure or facility used for the acceptance by donation, redemption or purchase of recyclable material from the public and which, except for a reverse vending machine and as may be allowed for a large recycling facility, does not use power-driven processing equipment. Collection facility includes, but is not limited to, a mobile recycling unit, a kiosk type unit which may include a permanent structure, unattended containers placed for the donation of recyclable material, and bulk reverse vending machine. [Ord. 07-1284 § 3 (Exh. B), 2007; Ord. 1060 § 3, 1993; Ord. 979 § 2 (Exh. A), 1990.]

##### **18.08.080 Commercial use classifications**

Collection facility (defined in PMC [18.06.215](#)) established as a principal or accessory use or device.

- a. Reverse Vending Machine. An automated or mechanical device which accepts at least one or more types of empty beverage containers including, but not limited to,

aluminum cans, glass and plastic bottles and issues cash refund or a redeemable credit slip. Typically, this type of vending machine does not cover an area larger than 50 square feet.

b. Small Recycling Facility. Collection facility established as an accessory use to a principal use, not exceeding 500 square feet in size. This facility may include: mobile recycling units (truck, trailer, van, boxes, bins, containers transported by truck, car or train), reverse vending machines, or grouping of reverse vending machines (more than three machines), kiosk type units (may be permanent), and unattended container placed for donation of recyclable materials.

26.e Retail and Wholesale Sales / **Mail Order or Direct Selling Establishment.** Retailing of merchandise outside of a fixed retail location or store. Uses in this classification include those businesses that store merchandise on-site within an enclosed building; accept orders transmitted by mail, telephone or the Internet; and distribute merchandise from an on-site office/point-of-sale desk through vending machines, person-to-person sales, or shipment directly to the consumer. Businesses within this use classification generally do not provide on-site retail opportunities to consumers, **but may dedicate up to 10 percent of the total building floor area to walk-in retail sales.**

### **Article XIII. Recycling Collection Facilities**

#### **18.84.575 Criteria and standards for collection facilities.**

B. Small Recycling Facility. Before approving a zoning administrator permit for a small recycling facility as indicated in PMC [18.84.560](#), the zoning administrator must make each of the findings set forth in PMC [18.16.040](#), and find that the facility meets the following standards as applicable:

1. The facility must be established in conjunction with an existing commercial or industrial use which is in compliance with the zoning, building and fire codes of the city;
2. The facility must be no larger than 500 square feet and occupy no more than three parking spaces not including space that will be periodically needed for removal of materials or exchange of containers;
3. The facility must be set back at least 20 feet from the closest public right-of-way or public sidewalk and not obstruct pedestrian or vehicular circulation;
4. The facility may accept only glass, aluminum cans, plastic containers, papers and reusable items. Used motor oil may be accepted with approval from the chief building official and Contra Costa County fire protection district;
5. The facility may not use power-driven processing equipment except for reverse vending machines;

6. The facility must use containers that are constructed and maintained with durable waterproof and rustproof material, covered when site is not attended, secured from unauthorized entry or removal of material, and be of a capacity sufficient to accommodate materials collected;
7. Multiple collection containers at one location must be all the same color (white or some other subdued color);
8. The facility must store all recyclable material in containers or in the mobile unit vehicle, and not leave materials outside of containers when attendant is not present;
9. The facility must be maintained free of litter and any other undesirable materials; mobile facilities, at which truck or containers are removed at the end of each collection day, must be swept and left clean at the end of each collection day;
10. The facility may not exceed noise levels of 60 dBA as measured at the property line of residentially zoned or occupied property, or otherwise not exceed 70 dBA;
11. Attended facilities located within 100 feet of a property zoned or occupied for residential use may operate only during the hours between 9:00 a.m. and 7:00 p.m.;
12. Containers for the 24-hour donation of materials must be at least 30 feet from any property zoned or occupied for residential use;
13. A trash receptacle must be included with the recycling facility and collection arrangements made with Pittsburg Disposal;
14. Containers must be clearly marked to identify the type of materials which may be deposited; the facility must be clearly marked to identify the name and telephone number of the facility operator and the hours of operation, and display a notice stating that no material may be left outside the recycling enclosure or containers;
15. The facility may not impair any landscaping required by this title;
16. No additional parking spaces are required for customers of a facility located at the established parking lot of a principal host use unless otherwise determined by the zoning administrator;
17. The facility must be located on the site to be visually in the least conspicuous area to the general public or it must be screened with landscaping, fencing or walls in a manner to provide an aesthetic quality compatible with surrounding structures.

## NOTICE OF PUBLIC HEARING

**NOTICE IS HEREBY GIVEN** that the **PLANNING COMMISSION** of the City of Pittsburg will conduct a public hearing on:

**DATE:** June 13, 2017  
**TIME:** 7:00 p.m.  
**PLACE:** City Council Chamber at City Hall  
65 Civic Avenue, Pittsburg, California

Concerning the following matter:

---

### **Pittsburg Disposal / Mt. Diablo Resource Recovery Park, AP-17-1235.**

This is a public hearing on a request for a recommendation for City Council approval of a Zoning Text Amendment and Use Permit application to allow implementation of the Recycle Smart Program within the existing building located at 555 California Avenue in the M (Mixed Use) District for Pittsburg Disposal / Mt. Diablo Recycling.

**PROJECT PLANNER:** Christine Gregory (925) 252-4824 or [cgregory@ci.pittsburg.ca.us](mailto:cgregory@ci.pittsburg.ca.us)

---

**Why am I receiving this notice?** You are receiving this notice because you have either previously requested notifications from the Planning Division, or a project has been proposed in your neighborhood and all property owners within a minimum 300-foot radius of the project site are required to be notified under the Pittsburg Municipal Code.

**Where can I get more information about this project?**

The complete file for this project is available for public inspection at the Planning Division, weekdays during the hours of 8:00 AM to 12:00 PM and 1:00 PM to 5:00 PM. You can also find out more about the project by contacting the project planner listed above.

**What can I do if I have comments on the project?**

Comments or objections to the project can be made by writing or through oral testimony during the public hearing. Written comments citing the project name may be emailed to the project planner listed above, or may be mailed or delivered to: Pittsburg Planning Division, 65 Civic Avenue, Pittsburg, CA 94565. You may also register your comments or objections by attending the public hearing on the date and time listed above.

Pursuant to Section 65009 of the California Government Code, if you challenge this matter in court, you may be limited to those issues you or someone else raised at the public hearing described in this notice, or in written correspondence on the matter delivered to this agency at, or prior to the public hearing. Any written correspondence delivered to the Planning Division before the hearing body's action on the matter will become a part of the administrative record.

Sent: Saturday, June 3, 2017 5:34 PM  
To: Christine Gregory  
Subject: No to Recycle Center  
Hi Christine,

I am a home owner in Stone Harbor and I am totally against having a recycle center in the old Wonder Bread Building. This will bring some shady characters in and around our neighborhood. It will bring shopping carts to our area, which people will just leave lying around. It will draw more traffic to our back gate and probably a lot of garbage as well. I think the City of Pittsburg can find a different place to put their recycle center.

Sincerely,

Claude J. Battaglia

To: Christine Gregory  
Subject: California Ave. Recycle Center  
Dear Ms. Gregory,

I would like to take this opportunity to state my opposition to the proposed recycle center in the old Wonder Bread Store.

My main concern in the additional traffic added to an already congested California Ave as well as additional traffic at the entrance to our homeowner's association. I do not think we should be subjected to the noise and litter recycle centers produce either.

Pittsburg Disposal needs to find somewhere that is not next to a residential area.

I hope the City Council thinks of the citizens they serve instead of a business when they make their final decision.

Sincerely,

Kathy Kemp

### **Introduction and Waive First Reading of an Ordinance Amending Title 18 of the Pittsburg Municipal Code Related to Permitting Small Recycling Facilities and Mail Order or Direct Selling Establishments in the M District, AP-17-1235 (RZ)**

This is a public hearing on a request for a zoning text amendment to add “small recycling facility” and “mail order or direct selling establishment,” as conditionally permitted uses in the M (Mixed Use) District. On June 13, 2017, the Planning Commission held a public hearing and subsequently adopted Resolution No. 10064, recommending approval of the proposed amendments. On July 17, 2017, the City Council held a public hearing and voted 2-1 to continue the item.

ALICE E. EVENSON, CITY CLERK  
CITY OF PITTSBURG

**OFFICE OF THE CITY MANAGER/EXECUTIVE DIRECTOR  
65 Civic Avenue  
Pittsburg, CA 94565**

**DATE:** 8/24/2018

**TO:** Mayor and Council Members

**FROM:** Joe Sbranti, City Manager

**SUBJECT:** Introduction and Waive First Reading of an Ordinance and  
Consideration of a Resolution Approving the Alves Ranch Project, AP-  
18-1348 (RZ, SUBD, DR)

**MEETING DATE:** 9/4/2018

**EXECUTIVE SUMMARY**

This is a public hearing on a request to: 1) introduce and waive first reading of an ordinance approving a zoning map amendment and EIR addendum; and 2) adopt a resolution approving a vesting tentative map and design review, to allow for the construction of 346 single-family dwelling units, a 12-acre commercial site, and ancillary features. The project site is located along the north side of West Leland Road, south of State Route 4. Assessor's Parcel Nos. 097-700-001; 097-700-002; and 097-700-005. On August 21, 2018, the Planning Commission considered the proposal in its entirety and adopted Resolution No. 10102, recommending approval of the project.

**FISCAL IMPACT**

One-time revenues related to construction permits and other development fees and exactions (as outlined in the proposed development agreement) are anticipated with this project.

**RECOMMENDATION**

City Council open the public hearing; take public comment; close the public hearing; introduce, waive further reading, and pass to second reading, the attached ordinance approving a zoning map amendment and an Addendum to the previously certified Environmental Impact Report (EIR), and adopt the attached resolution approving vesting tentative map and design review for the Alves Ranch Project.

**BACKGROUND**

In 2004, William Lyon Homes, Inc. and Alves Ranch LLC submitted a plan to develop approximately 293-acres of the Alves' property as a residential and commercial subdivision, known as the Vista Del Mar development. The 2004 Vista Del Mar project anticipated approximately 1,100 housing units, approximately 257,500 square feet of commercial floor space, an approximately 11.33-acre school/park site, approximately 117.68 acres of permanent hillside open space, associated landscaped buffers, public and private roadways, a detention basin, a water tank site, and a water pump station site.

In August 2008, a revised development plan was proposed for the approximately 57.81-acre portion of the 2004 Vista Del Mar development, located north of West Leland Road. These changes contemplated development of up to 308 multifamily units (including 93 affordable housing units), and 170 single-family detached units (478 units total) on 31.7 acres; the plan also included 221,500 square feet of commercial floor space on approximately 14.0 acres. The City and the applicant continued to refine the revised development plan, making minor changes to the site plan and project design before approving the revisions on January 20, 2009 (Ordinance No. 08-1312). The January 20, 2009, approval ultimately anticipated the development of up to 560 housing units, a 0.6-acre recreational facility, and 221,500 square feet of commercial floor area.

Since adoption of the Alves Ranch Master Plan, the project proposal for the site has been further refined based on current market conditions, as well as the desire of residents for additional retail commercial opportunities within the area of the City west of Bailey Road. On November 7, 2017, the proposed project was discussed by the Land Use Subcommittee (additional details below).

On August 21, 2018, the Planning Commission held a public hearing on this item and voted 3-1 (with three members absent) to recommend approval of the project in its entirety.

**Existing Conditions:** The proposed project covers approximately 57.81 acres and is located north of West Leland Road, south of State Route (SR) 4, and approximately one-half mile west of the Pittsburg/Bay Point BART Station. The site proposed for development has been previously graded, so it is relatively flat, with the exception of a dirt mound that exists along the eastern project boundary and straddles the property line between the Alves Ranch site and the West Coast Home Builders owned property to the east, and a large detention basin located along the northern property boundary. The project site is also located at a higher elevation than the adjacent SR 4, so there are large graded slopes along the northern project boundary line that slope down to the adjacent freeway. The elevation difference from the freeway and the areas proposed for residential development is approximately 35 to 40 feet. The rest of the project site is currently vacant and undeveloped and there is no infrastructure (water, sewer, etc.) built on the site yet, with the exception of the intersection signal improvements at West Leland Road and Alves Ranch Road. This intersection will serve as the main entrance to the new development.

**Surrounding Land Uses:** See Attachment 10, "Project Location Map and Existing Conditions," for an overview of surrounding uses.

**Proposed Project:** The applicant proposes to construct 346 single-family residential units. The residential portion of the project is broken up into three sub-neighborhoods: Neighborhood A (comprised of sections A-1 and A-2), which includes 136 single-family attached units ("duets"); Neighborhood C, which includes 110 alley-loaded detached units; and Neighborhood D (comprised of sections D-1 and D-2) which includes 100 small lot, traditional single family detached homes.

Multiple approvals are requested for this project; the first is for a zoning map amendment that would rezone the entire site to PD District. The PD District would allow for flexible, small lot development, as well as a commercial opportunity which would complement the surrounding residential areas. As shown in the PD Plan (Attachment 3), the proposed development regulations and lot sizes for the residential portion of the project, as well as for the recreation area, streets, alleyways, and other features, would be the same as those shown within the vesting tentative map and project plans.

The second approval is for a vesting tentative map (Attachment 7) that would subdivide the 57.81-acre site into 346 residential lots ranging in size from approximately 1,686 to 4,645 square feet (yielding a residential density of approximately 14 dwelling unit per acre); a 12-acre commercial parcel; a 0.8-acre recreation area; a 9.11-acre stormwater detention area to be dedicated to the Southwest Geological Hazard Abatement District (GHAD); and various smaller open spaces, streets, and alleyways. Access to the residential portions of the development would be provided at two separate access points, one leading directly into Neighborhood D, and another between the commercial parcel and residential Neighborhood C.

All homes within Neighborhood A would be served by private, 20-foot wide driveways which would allow for automobile access to each unit's garage. Access to each Neighborhood A unit's front door would be via a pedestrian pathway between each four- or eight-unit bunch. Homes within Neighborhood C would be served by private streets or alleyways which would provide garage access. Similar to Neighborhood A, the front of each home would be accessed via a private paseo. Units in Neighborhood C would each have a private yard approximately 9-feet wide, which would be placed between houses. Lots 75-76, as well as 177-186 would be oriented so that the front façade faces West Leland Road, helping to create an active streetscape that encourages non-automobile travel.

Neighborhood D would have a more traditional layout, with each home maintaining a rear yard and two side yards. Seventy-six of the proposed units in Neighborhood D would be accessed via private driveways, similar to recent development approved within the City, such as the Waterstone and Liberty Subdivisions; the remaining 24 units would be accessed via private streets. Parking would be prohibited along alleys/motorcourts; however, approximately 163 marked, on-street spaces would also be available for guest parking.

Six-foot sidewalks would be installed along all streets and within paseos as necessary to provide a safe pedestrian pathway to all homes. In addition, the developer has proposed a Class I bike/pedestrian facility along the frontage of Neighborhoods C and D. This facility would include an eight-foot wide pathway, as well as two-foot wide shoulders on either side, allowing for a comfortable pedestrian or biking experience.

The third approval is for design review of architectural and landscape plans (see Attachment 7). The architectural plans contain numerous house models, including two plans and three architectural styles for Neighborhood A, and three different plans and distinct architectural styles for Neighborhood C and D. In addition, the applicant has proposed over a dozen different color schemes and a plotting plan which shows no two adjacent homes would be alike.

Each unit within the subdivision would be two-story. The house model designs are characterized by a mixture of hipped and gable-end roofs with composite tile roofing

material, stucco siding and simulated stone veneer or horizontal lap siding, and windows with wrought iron railings. The proposed house models range from 1,375 to 1,934 square feet in total living area. Homes in Neighborhoods A and C would include three bedrooms and two and one-half baths, while homes in Neighborhood D would include up to five bedrooms and two and one-half baths. Ten of the homes in Neighborhood D would be designed with a 452 square foot, two-story, one bedroom/one bathroom accessory dwelling unit (ADU) to meet the City's affordable housing requirements. These ADUs would maintain a separate entrance from the main home.

The landscape plans include fencing, planting, and irrigation details. Along West Leland Road, the proposed landscape improvements include wide landscaped areas with the aforementioned Class I pathway and upwards of 80 street trees. Although the vesting tentative map and landscape plans show otherwise, the applicant has agreed to construct decorative masonry walls along all side and rear residential yards adjacent to West Leland Road. The applicant also proposes a recreation area complete with bocce courts, a basketball half-court, an asphalt track, and benches, picnic tables, and a generous amount of open turf space, along with decorative plantings.

#### GENERAL PLAN/CODE COMPLIANCE:

General Plan: The project site is located within the 'Southwest Hills' subarea of the General Plan. The approximate western half of the site is designated 'Business Commercial', while the approximate eastern half is designated 'High Density Residential.' The 'Business Commercial' designation is intended to provide sites for administrative, financial, business, professional, medical, research and development, and public offices, as well as custom manufacturing, limited assembly, light manufacturing, warehousing and distribution, and support commercial uses. It also allows mixed-use development with a maximum floor-to-area-ratio (FAR) of 1.0. While the General Plan states limits on retail activities will be specified in the Zoning Ordinance, no limitations or complementary zoning districts are specified. The 'High Density Residential' designation is intended to provide sites for residential development with a density of 14 to 25 units per acre. A wide range of housing types, from single-family attached units to multi-family complexes are permitted; however, it should be noted that the previous master plan approved the development of single family detached units within the 'High Density Residential,' land use designation, as these units were proposed at a density consistent with the land use designation, and with the intent of providing a private yard area, and were consistent with the provisions of the Vista Del Mar DA.

The residential portion of the proposed master plan includes a total of 346 residential units, as well as 10 ADUs, on approximately 25.2 acres, yielding an overall gross project density of 14.13 dwelling units per acre. The project density would be within the allowable density range identified by the General Plan for the 'High Density Residential' designation. The uses proposed (including the single family detached residential units) are consistent with the accompanying General Plan land use designation and the provisions of the Vista Del Mar Development Agreement.

In addition, General Plan policy 2-P-88 is directly applicable to the project site, and it generally states that development shall be allowed on the site east of the proposed West Leland Road/San Marco Boulevard intersection (Alves Ranch) with a maximum of 560 medium- and high-density residential units and a maximum of 20 acres of 'Business Commercial' land between West Leland Road and SR 4. As mapped, the approximately 57.81-acre site is split in half between the 'Business Commercial' and High Density

Residential' designations, meaning that approximately 29 acres of land is designated 'High Density Residential,' with another 29 as 'Business Commercial,' exceeding the 20-acre threshold of 'Business Commercial' land called for in the Policy. It should also be noted that the designation boundaries do not follow an established parcel boundary or natural bifurcation. As such, staff has determined that the land uses identified within the General Plan Land Use Map are intended to be programmatic, with the final layout of the different uses to be determined as part of a master planning effort. The current project proposal is consistent with policy 2-P-88 and the overall intent of the General Plan in that there would be approximately 12 net acres of commercial development and 356 residential units proposed, which is within the maximum allowable development program.

**Zoning:** In similar fashion to the land use designations mentioned above, the western third of the site is zoned CO-P (Office Commercial with a Master Plan Overlay) District, while the eastern two-thirds is zoned and RH-P (High Density Residential with a Master Plan Overlay) District. These zoning districts were established as part of the 2009 Alves Ranch Master Plan, which was never developed. The requested zoning map amendment would change the zoning designation for the project site from RH-P and CO-P Districts to PD District. Pursuant to PMC section 18.48.030, the Planning Commission shall include written findings to support any recommendation it makes to the City Council to amend the Zoning Ordinance.

Pursuant to PMC section 18.62.010(D), PD Districts can be utilized in order to provide for flexibility, consistent with the general plan, from the rigid land use and development regulations found in base districts in order to take advantage of unique land use or site characteristics. The proposed PD District is consistent with the PMC section, in that it includes reduced setback and lot size requirements, and increased lot coverage allowances, in order to construct a unique development pattern on a relatively-large infill site with a variety of housing types which have successfully been implemented in other areas of the City, as well as a commercial area. The development pattern was not contemplated by the existing base districts and would likely not be possible using the City's established standard residential development regulations.

In contrast to the previous Master Plan, which identified more general design and development regulations for the majority of the residential areas, the proposed PD Plan provides a more detailed development program, and the developer proposes to entitle and construct all units in succession.

**Design Guidelines:** The proposed project is subject to the City's Development Review Design Guidelines (DRDG), adopted by the Planning Commission through Resolution No. 9864. As shown in Attachment 12, the project is substantially consistent with the City's DRDGs.

**Required Findings – Zoning Map Amendment:** In order to approve zoning changes, the City Council must determine, in accordance with PMC section 18.48.030, that:

A. the change proposed is consistent with the objectives, policies, general land uses and programs specified in the General Plan and applicable specific plan;

B. a community need is demonstrated for the change proposed; and

C. its adoption would be in conformity with public convenience, general welfare and good zoning practice.

Required Findings – Tentative Map: In order to approve a tentative map, the City Council must determine, in accordance with PMC section 17.20.060(c), that:

- A. the proposed map is consistent with the general plan and any applicable specific plan, or other applicable provision of PMC;
- B. the site is physically suitable for the type of development;
- C. the site is physically suitable for the proposed density of development;
- D. the design of the subdivision or the proposed improvements would not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;
- E. the design of the subdivision or the type of improvements would not cause serious public health problems; and
- F. the design of the subdivision or the type of improvements would not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision.

Required Findings – Design Review: In order to grant design review approval for a project, the City Council must determine, in accordance with PMC section 18.36.220.B, that:

- A. the structure conforms with good taste, good design and in general contributes to the character and image of the City as a place of beauty, spaciousness, balance, taste, fitness, broad vistas, and high quality;
- B. the structure would be protected against exterior and interior noise, vibrations and other factors that may tend to make the environment less desirable;
- C. the exterior design and appearance of the structure is not of inferior quality as to cause the nature of the neighborhood to materially depreciate in appearance and value;
- D. the structure is in harmony with proposed developments on land in the general area; and
- E. the application conforms with the criteria set forth in any applicable City adopted Design Guidelines.

Environmental Review: An Environmental Impact Report (EIR) was previously prepared for the Vista Del Mar project, which included a programmatic plan for the Alves Ranch site. On October 18, 2004, the City Council adopted Resolution No. 04-10168 certifying that the Final Environmental Impact Report (FEIR) for the Vista Del Mar project (SCH # 2004012097) was prepared in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines. On November 29, 2004, after having reviewed and considered the environmental documentation prepared for the Vista Del Mar project, the Council adopted Resolution No. 04-10191 approving CEQA findings, adopting a Statement of Overriding Considerations, and a Mitigation and Monitoring and Reporting Program (MMRP) for the Vista Del Mar project.

The original 2004 EIR addressed the environmental implications of a proposed comprehensive mixed-use development project occupying an approximately 293-acre site

(2004 EIR project site) located south of State Highway 4 between the Oak Hills and San Marco subdivisions (both north and south of West Leland Road) in the City's Southwest Hills planning subarea. The development project addressed in the 2004 EIR consisted of a residential and commercial subdivision including a maximum of 1,100 housing units (537 single-family lots and courtyard houses south of West Leland Road, and 563 multi-family units north of West Leland Road), approximately 257,500 square feet of commercial floor space (also north of West Leland Road), an 11.3-acre school/park site, approximately 117.7 acres of permanent hillside open space, and associated landscaped buffers, public and private roadways (including an extension of West Leland Road through the site), detention basin site, water tank site, and water pump station site.

Section 15162(a) of the CEQA Guidelines states that when an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines that, either: 1) the project proposes substantial changes which would present a new significant impact; 2) there are substantial changes with respect to the circumstances under which the project is undertaken that would present a new significant impact; or 3) there is new information available that was not previously available relating to new or previously identified significant impacts.

A previous addendum originally prepared for the project in 2008, and analyzed development of a maximum of 560 units on approximately 32.12 acres, as well as approximately 227,000 square feet of commercial space on approximately 14 acres. The revised proposal includes a site layout and design details for 346 residential units (as well as 10 ADUs). The current Alves Ranch application request is for approval of a rezoning, a vesting tentative subdivision map, and design review approval for the approximately 57.81-acre portion of the 2004 EIR project located north of West Leland Road.

Since the project proposal for the Alves Ranch site has been further refined from what was originally reviewed in the 2004 EIR (as described above), and since no new significant impacts were found, preparation of an Addendum to the 2004 EIR pursuant to CEQA Guidelines section 15164 (Addendum to an EIR or Negative Declaration) is the appropriate method for achieving CEQA compliance for the current project.

Public Notice: On or prior to August 25, 2018, in accordance with Government Code sections 65090 and 65091, and PMC section 18.14.020.B and D, a "Notice of Public Hearing," for the September 4, 2018, public hearing on this item was published in the East County Times; was posted at City Hall; was delivered for posting at the Pittsburg Library; and was mailed via first class or electronic mail to the applicant, to the property owner, to owners of property located within 300 feet of the proposed project site, to local service agencies whose services might be affected by this project, and to individuals who had previously filed written request for such notice.

### **SUBCOMMITTEE FINDINGS**

As mentioned above, on November 7, 2017, the proposed project was discussed by the Land Use Subcommittee. The Subcommittee was generally supportive of the modifications and amendment to the previous affordable housing requirement specified within the Development Agreement in exchange for reduced density, a parcel sized and zoned to provide for a successful commercial development that would provide retail opportunities for the surrounding neighborhoods, and prioritization of development of the commercial portion of the project.

## **STAFF ANALYSIS**

Staff believes that the City Council can make the required findings to approve the proposed project. In particular, staff believes the proposed project would promote a diversity of housing types and densities near the Pittsburg/Bay Point BART station. The development would also enhance the visual quality of the area by developing a long-standing vacant site. In addition, the proposed development would potentially kick-start a new, large commercial development in the area, which residents west of Bailey Road have been adamantly pushing for for several years.

The proposed rezoning would be consistent with the objectives, goals, and policies in the General Plan in that, among other reasons provided as part of the resolution, the project would: a) provide a variety of types of single-family residential units in an area accessible to transit and services; b) expand Pittsburg's housing diversity by providing higher-density single-family development on smaller lots; c) promote the development and intensification of the area near the Pittsburg/Bay Point BART Station as a neighborhood retail center by increasing the demand for retail and other amenities, while providing utility stub-outs to streamline commercial development; d) encourage walking as a regular means of transportation due to the site's proximity to various amenities; e) provide a recreation area that is centrally located and within reasonable walking distance of all homes in the subdivision; f) provide sound walls along the northern site perimeter; and g) provide ten single-family homes with ADUs that would allow extended families to live near each other, increase the affordable and rental housing stock, and provide income assistance to homeowners.

The design of the proposed subdivision and accompanying improvements would not cause substantial environmental damage or substantially and unavoidably injure fish or wildlife or their habitat, in that the project would comply with the mitigation measures identified in the 2004 Vista Del Mar EIR, as applicable and outlined within the prepared addendum. Furthermore, the design of the subdivision and type of improvements proposed would not cause serious public health problems.

The proposed project would conform with good taste, good design and in general contributes to the character and image of the City as a place of beauty, spaciousness, balance, taste, fitness, broad vistas, and high quality, in that the proposed house models would feature an attractive architectural design characterized by a mixture of hipped and gable-end roofs with high-quality, composite tile roofing material; stucco siding with horizontal trim, and simulated stone veneer and/or horizontal lap siding; and windows with decorative wrought iron railings. The proposed project would also provide an attractive outdoor environment for residents. A variety of colorful, drought-tolerant landscaping would be provided, and a decorative, masonry sound wall with wall caps would be installed. Residential front yards would feature drought-tolerant plants and blooming street trees that would provide seasonal color throughout the subdivision.

Lastly, the proposed project would substantially conform to the applicable DRDGs for single-family development, particularly if conditions are added requiring the developer to: a) provide split face block walls with pilasters at intervals of 25 feet or less along West Leland Road; b) provide screening for utility boxes, transformers, backflow preventers, meters, and junction boxes; c) provide, as part of the options package for homebuyers, solar panels or an option offering pre-wiring for solar panels; d) proposed landscaping be required to meet the standards set forth in PMC Section 18.84.310; and e) provide cool roofs for reduction of

heat island effect or installation of solar panels, consistent with DRDG sections 1.c, 2.b through 2.d, 2h, and 6.A.1 through 6.A.2, 6.A.4, and 6.A.6.

The City Council of the City of Pittsburgh DOES ORDAIN as follows:

SECTION 1. Recitals.

- A. On June 18, 2018, Mandy Leung of William Lyon Homes, Inc., filed Planning Application No. AP-18-1348, requesting approval of: 1) a zoning map amendment rezoning the site from a combination of RH-P (High Density Residential with a Master Plan Overlay) and CO-P (Office Commercial with a Master Plan Overlay) Districts to PD (Planned Development) District; 2) a vesting tentative map subdividing the 57.81-acre site to allow for the construction of a 346-unit, single family development as well as a 12-acre commercial site; and 3) design review of architectural and landscape plans. The project site is located along the north side of West Leland Road, south of State Route 4. Assessor's Parcel Nos. 097-700-001; 097-700-002; and 097-700-005.
- B. The proposed project is governed by the applicable goals and policies of the Pittsburgh General Plan, the Pittsburgh Municipal Code (PMC), and the City's Design Review and Development Guidelines adopted by Planning Commission through Resolution No. 9864.
- C. On January 20, 2009, the City Council adopted Ordinance No. 08-1312, approving the Alves Ranch Master Plan and an EIR addendum. The previously approved master plan contemplated up to 560 residential units, as well as up to 14 acres of office commercial space.
- D. Since adoption of the Alves Ranch Master Plan, the project proposal for the site has been further refined based on current market conditions, as well as the desire of residents for additional retail commercial opportunities within the area of the City west of Bailey Road.
- E. On November 7, 2017, the proposed project was discussed by the Land Use Subcommittee. The Subcommittee was generally supportive of the modifications and amendment to the previous affordable housing requirement specified within the Development Agreement in exchange for reduced density, a parcel sized and zoned to provide for a successful commercial development that would provide retail opportunities for the surrounding neighborhoods, and prioritization of development of the commercial portion of the project.

- F. Pursuant to PMC section 17.16.100, an applicant may request that two or more applications for separate discretionary approvals, including zoning amendments under Title 18 of this Code, requested or required in conjunction with a project be consolidated.
- G. Pursuant to PMC sections 18.16.02 and 18.48.030, the City Council, upon recommendation of the Planning Commission, may approve a zoning map amendment if it finds that: 1) the change proposed is consistent with the objectives, policies, general land uses and programs specified in the General Plan and applicable specific plan; 2) a community need is demonstrated for the change proposed; and 3) its adoption will be in conformity with public convenience, general welfare and good zoning practice.
- H. On August 21, 2018, after conducting a duly noticed public hearing, the Planning Commission adopted Resolution No. 10102, recommending approval the requested zoning map amendment.
- I. An Environmental Impact Report (EIR) was previously prepared for the Vista Del Mar project, which included a programmatic plan for the Alves Ranch site. On October 18, 2004, the City Council adopted Resolution No. 04-10168 certifying that the Final Environmental Impact Report (FEIR) for the Vista Del Mar project (SCH # 2004012097) was prepared in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines. On November 29, 2004, after having reviewed and considered the environmental documentation prepared for the Vista Del Mar project, the Council adopted Resolution No. 04-10191 approving CEQA findings, adopting a Statement of Overriding Considerations, and a Mitigation and Monitoring and Reporting Program (MMRP) for the Vista Del Mar project.
- J. Section 15162(a) of the CEQA Guidelines states that when an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines that, either: 1) the project proposes substantial changes which would present a new significant impact; 2) there are substantial changes with respect to the circumstances under which the project is undertaken that would present a new significant impact; or 3) there is new information available that was not previously available relating to new or previously identified significant impacts.
- K. Since the project proposal for the Alves Ranch site has been further refined from what was originally reviewed in the 2004 EIR (as described above), and since no new significant impacts were found, preparation of an Addendum to the 2004 EIR pursuant to CEQA Guidelines section 15164 (Addendum to an EIR or Negative Declaration) is the appropriate method for achieving CEQA compliance for the current project.
- L. On or prior to August 25, 2018, in accordance with Government Code sections 65090 and 65091, and PMC section 18.14.020.B and D, a "Notice of Public Hearing," for the September 4, 2018, public hearing on this item was published in the East County Times; was posted at City Hall; was delivered for posting at the Pittsburg Library; and was mailed via first class or electronic mail to the applicant, to

the property owner, to owners of property located within 300 feet of the proposed project site, to local service agencies whose services might be affected by this project, and to individuals who had previously filed written request for such notice.

- M. On September 4, 2018, the City Council held a duly-noticed public hearing to: 1) introduce and waive further reading of this ordinance approving the proposed zoning map amendment and Environmental Impact Report Addendum; and 2) adopt resolution approving the proposed vesting tentative map and design review, at which time oral and/or written testimony was considered.

## SECTION 2. Findings.

- A. Based on the City Council Staff Report entitled, "Introduction and Waive First Reading of an Ordinance and Consideration of a Resolution Approving the Alves Ranch Project, AP-18-1348 (RZ, SUBD, DR)," dated September 4, 2018, and based on all the information contained in the Planning Division files on the project, incorporated herein by reference and available for review in the Planning Division located at 65 Civic Avenue in Pittsburg, and based on all written and oral testimony presented at the public hearing, the City Council finds that:
1. All recitals above are true and correct and are incorporated herein by reference.
  2. Since the project proposal for the Alves Ranch site has been further refined from what was originally reviewed in the 2004 EIR (as described above), preparation of an Addendum to the 2004 EIR pursuant to CEQA Guidelines section 15164 ("Addendum to an EIR or Negative Declaration") is the appropriate method for achieving CEQA compliance for the current project.
  3. The proposed rezoning is consistent with the objectives, policies, general land uses, and programs specified in the General Plan, in that:
    - a. The proposed rezoning of the site from a combination of RH-P (High Density Residential with a Master Plan Overlay) and CO-P (Office Commercial with a Master Plan Overlay) Districts is consistent with the existing General Plan land use designations of Business Commercial and High Density Residential. The existing land use designations represent a prescribed development program which is intended to be planned, mixed-use, transit-oriented village, with a prescribed maximum number of residential units and Business Commercial acreage (Policies 2-P-89 and 2-P-92). The proposed PD (Planned Development) District is intended to support development of the Alves Ranch Residential Development, which is consistent with the intended function of the site and prescribed development program. The project proposes an overall residential density of approximately 14 dwelling units per acres, consistent with the prescribed density of the High Density Residential Land Use Designation.
    - b. The project will be developed on an infill site, thereby helping the City maintain a compact urban form (Goal 2-G-1).

- c. The project will provide higher-density single-family residential units in an area near public transit (Goal 2-G-4). The project site is within a half-mile distance of the Pittsburg/Bay Point BART Station and directly adjacent to two bus stops located near the intersection of Alves Ranch Road and West Leland Road.
- d. The project will expand Pittsburg's housing diversity by providing higher-density single-family development on smaller lots ranging from approximately 1,686 to 4,645 square feet, with a variety of traditional detached units, alley-loaded detached units, and attached "duet-style" units (Goal 2-G-5 and Housing Goal G-1).
- e. The project will utilize a Planned Development (PD) zoning, in part, to achieve a high-quality design outcome (Policy 2-P-5).
- f. The project will provide an 34,848-square-foot recreation area, complete with a bocce court, basketball court, BBQs, and seating areas as a community amenity within the planned development (Policy 2-P-6). A condition of approval will require the developer also install a covered seating area, drinking fountains, and waste receptacles.
- g. The project will pay its share of the costs for the construction of facilities needed to serve the development (Policy 3-P-1, 3-P-13, and 7-P-2). It will comply with conditions of approval requiring payment of the Facilities Reserve Charge, Local Traffic Mitigation Fee (LTMF), and Regional Transportation Development Impact Mitigation Fee (RTDIM) in accordance with the PMC.
- h. The project will be built in an area where public facilities and infrastructure are already available (Policy 3-P-1).
- i. The existing transportation system has adequate capacity to accommodate the proposed development (Policy 3-P-2). Residents of the proposed development will have multiple transportation options available to them as the site is located near BART, Tri-Delta Transit, and bicycle lanes.
- j. A traffic impact study was prepared as part of the 2004 Vista Del Mar EIR, which analyzed development of up to 563 residential units and over 250,000 square feet of commercial area. An updated Trip Generation Analysis and revised Site Access and Circulation Assessment was prepared as part of the proposed project to ensure the proposed project is consistent with the previously prepared traffic impact study (Policy 3-P-5).
- k. The project will provide safe and contiguous routes for pedestrians and bicyclists (Policy 3-P-17, 7-P-34, and 7-P-40). While a Class II bicycle facility exists along the project frontage, as part of the proposed project, the developer has proposed a combination of a Class I bicycle facility and

temporary path along the southern boundary of the project site, connecting to existing sidewalks on either side. In addition, a condition of approval will require the developer provide a separate Class I trail at a point along the eastern boundary of the site, which will potentially connect to a future Class I trail across the vacant parcel to the east.

- l. The project will encourage walking as a regular means of transportation due to the site's proximity to various amenities (Goal 7-G-15). The project site is within a half-mile distance of BART, existing commercial opportunities along Bailey Road and San Marco Boulevard, Ray Giacomelli Park, and a future Mt. Diablo Unified School District school site. In addition, the project will designate an approximately 12-acre commercial parcel, which, when developed, will allow for additional commercial opportunities within walking distance of the proposed development, but also existing developments in the area, further encouraging walking as a means of transportation in the area.
- m. The project will provide an approximately 0.8-acre recreation area that is centrally located and within reasonable walking distance of all homes in the subdivision (Policy 8-P-2).
- n. The project will equitably share the costs associated with providing water and wastewater services to the subdivision through payment of the Pittsburg Facilities Reserve Charge (Policy 11-P-7 and 11-P-18).'
- o. The project will provide sound walls adjacent to all homes along the northern perimeter of the site to help ensure interior noise levels do not exceed 45 dB CNEL (Policy 12-P-6).
- p. The project site being rezoned is vacant, underutilized, and deemed appropriate for higher-density residential use given its proximity to parks, transit, and commercial amenities (Housing Element Policy P-1.1 B).
- q. The project will provide market-rate and above-market-rate housing and increase demand for economic activity in nearby shopping centers (Housing Policy P-1.2).
- r. The project will provide at least ten single-family homes with accessory dwelling units that will allow extended families to live near each other, increase the affordable and rental housing stock, and provide income assistance to homeowners (Housing Policy P-1.5).
- s. The project will help attain the City's Regional Housing Needs Allocation for moderate and above-moderate income households (Policy P-1.6).
- t. The project will comply with conditions of approval requiring construction of quality home designs to ensure future residents will enjoy an attractive living environment (Housing Goal G-5 and Policy P-5.1).

4. There is a community need for the proposed zoning change, in that the amendment will facilitate occupancy of a long-standing vacant site in accordance with the City's housing goals calling for development of a variety of housing types, densities, and prices to balance the City's housing stock and to meet Pittsburgh's regional fair share housing needs for people of all income levels. Providing 346 small-lot, market-rate and above residential units along with multiple accessory units which are determined to be affordable by design at the site will provide diverse housing options for residents and create an opportunity for more residents to utilize the Pittsburgh/Bay Point BART Station and other public transit opportunities.
  5. The proposed zoning amendment will be in conformity with public convenience, general welfare, and good zoning practice, in that the amendment will facilitate development of a long-standing vacant site, which could help to eradicate existing problems that come with vacant sites, such as illegal dumping and loitering. Additionally, the proposed project will add additional residents to the area who may frequent the established and potential commercial uses envisioned in the area. In addition, the site's proximity to both the Pittsburgh/Bay Point BART Station and two existing bus routes presents an opportunity for more residents to utilize public transit opportunities.
- B. The City Council Staff Report entitled, "Introduction and Waive First Reading of an Ordinance and Consideration of a Resolution Approving the Alves Ranch Project, AP-18-1348 (RZ, SUBD, DR)," dated September 4, 2018, is referenced hereto as additional support for findings.

### SECTION 3. Decision.

Based on the findings and the authority set forth above, the City Council hereby:

- A. Adopts the attached EIR Addendum for the Alves Ranch Development, shown as Exhibit A, which Addendum is herein incorporated by reference; and
- B. Amends the Zoning Map, as referenced in Pittsburgh Municipal Code, Title 18 ("Zoning") section 18.04.020, to change the zoning for the project site from a combination of 'CO-P' and 'RH-P' Districts to 'PD' District and adopting specific land use and development regulations as substantially presented in Exhibit B of this resolution.

#### SECTION 4. Effective Date

This Ordinance shall be in full force and effective thirty (30) days after its adoption.

#### SECTION 5. Publication.

The City Clerk shall either (a) have this ordinance published once within 15 days after adoption in a newspaper of general circulation or (b) have a summary of the ordinance published twice in a newspaper of general circulation, once 5 days before its adoption and again 20 days after its adoption.

The foregoing ordinance was introduced at a meeting of the City Council of the City of Pittsburg held on September 4, 2018, and was adopted and ordered published at a meeting of the City Council held on September 17, 2018, by the following vote:

## SECTION 1: INTRODUCTION

This Addendum, checklist, and attached supporting technical reports and other documents have been prepared to determine whether and to what extent the *2004 Vista Del Mar Project Final Environmental Impact Report* (“2004 FEIR” State Clearinghouse No. 2004012097), prepared for the City of Pittsburg remains sufficient to address the potential impacts of the proposed 2018 Alves Ranch development (“Master Plan Amendment” (“2018 proposed project”)), or whether additional documentation is required under the California Environmental Quality Act (CEQA) (Pub. Resources Code, Section 21000, et seq.). The proposed project would be located at the project site (as that term is defined below), which is located within the area previously evaluated in the 2004 FEIR.

### 1.1 - Initial Study/Environmental Checklist

Pursuant to Public Resources Code Section 21166, and *CEQA Guidelines* Sections 15162 and 15164, subd. (a), this Addendum, checklist, and attached supporting documentation have been prepared to evaluate the 2018 proposed project and compare it to the 2004 EIR findings to determine whether any additional environmental review under CEQA is triggered. This Addendum, checklist, and attached supporting documentation use the standard environmental checklist categories provided in Appendix G of the *CEQA Guidelines*, but provides answer columns for evaluation consistent with the considerations listed under *CEQA Guidelines* Section 15162, subd. (a).

### 1.2 - Environmental Analysis and Conclusions

*CEQA Guidelines* Section 15164, subd. (a) provides that the lead agency or a responsible agency shall prepare an addendum to a previously certified Environmental Impact Report (EIR) or Negative Declaration (ND) if some changes or additions are necessary but none of the conditions described in *CEQA Guidelines* Section 15162 calling for preparation of a subsequent or supplemental EIR or ND have occurred (*CEQA Guidelines*, Section 15164, subd. (a)).

An addendum need not be circulated for public review but can be included in or attached to a final EIR or ND (*CEQA Guidelines* Section 15164, subd. (c)). The decision-making body shall consider the addendum with the final EIR prior to making a decision on the project (*CEQA Guidelines* Section 15164, subd. (d)). An agency must also include a brief explanation of the decision not to prepare a subsequent or supplemental EIR or ND pursuant to Section 15162 (*CEQA Guidelines* Section 15164, subd. (e)).

Consequently, once a final EIR or ND has been certified for a project, no subsequent or supplemental EIR or ND is required under CEQA unless based on substantial evidence:

- 1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or ND . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;<sup>1</sup>

<sup>1</sup> CEQA Guidelines Section 15382 defines “significant effect on the environment” as “ . . . a substantial, or potentially substantial

- 2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or ND . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- 3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the ND was adopted. . . shows any of the following:
  - a. The project will have one or more significant effects not discussed in the previous EIR or ND or negative declaration;
  - b. Significant effects previously examined will be substantially more severe than shown in the previous EIR or ND;
  - c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
  - d. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR or ND would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative (CEQA Guidelines, Section 15162, subd. (a); see also Pub. Resources Code, Section 21166).

This Addendum analyzes the proposed project in the context of the 2004 FEIR as required by CEQA. This Addendum, checklist, and attached supporting documentation constitutes substantial evidence supporting the conclusion that preparation of a supplemental or subsequent EIR is not required prior to approval of the proposed project and related approvals by the City, and provides the required documentation under CEQA.

This Addendum addresses the conclusions of the 2004 FEIR.

### 1.2.1 - Findings

The City of Pittsburgh certified a Final EIR for the Vista Del Mar development, which includes the site of the 2018 proposed project, on October 18, 2004. On November 29, 2004, the City adopted Resolution No. 04-10191 approving the required CEQA findings, adopting a Statement of Overriding Considerations, and approving a Mitigation, Monitoring and Reporting Program (MMRP). On January 20, 2009, the City approved an addendum to the 2004 FEIR (“2008 Addendum”) making minor modifications to the Vista Del Mar development previously studied in the 2004 FEIR and approving a Master Plan for the project site. In addition, on April 16, 2012, the City adopted Resolution No. 12-11800, approving a 2<sup>nd</sup> addendum to the 2004 FEIR (“2012 Addendum”) making minor modifications to the approved land uses within the Vista Del Mar development along the south side of West Leland Road previously studied in the 2004 FEIR.

---

adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance . . .” (see also Public Resources Code, Section 21068).

Since the 2018 proposed project would make minor modifications to the project that was originally reviewed in the 2004 FEIR and 2008 Addendum and approved in 2009, preparation of an addendum to the 2004 FEIR pursuant to *CEQA Guidelines* section 15164 (“Addendum to an EIR or Negative Declaration”) is the appropriate method for achieving CEQA compliance for the 2018 proposed project. This Addendum analyzes the 2018 proposed project revisions’ potential environmental impacts as they compare to the environmental analysis in the 2004 FEIR and, where necessary, for a full discussion of impacts, by comparing the proposed project to the modified development proposal approved in 2009 pursuant to the 2008 Addendum.

As described more fully herein, there are no substantial changes contemplated by the proposed project or in the circumstances in which the proposed project will be undertaken that require major revisions of the 2004 FEIR. The proposed revisions do not require preparation of a new subsequent or supplemental EIR, due to either the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. As illustrated herein, the proposed project and its associated impacts are consistent with those analyzed in the 2004 FEIR, and would involve only minor changes to the development evaluated in the 2004 FEIR; therefore, an addendum is appropriate CEQA compliance for the proposed project.

### 1.2.2 - Conclusions

The City of Pittsburg may approve the proposed project based on this Addendum. The impacts of the proposed project remain consistent with the impacts previously analyzed in the 2004 FEIR, and would not result in any new significant impacts or an increase in the severity in previously identified significant impacts (*CEQA Guidelines* Section 15164).

## 1.3 - Mitigation Monitoring Program

As required by Public Resources Code Section 21081.6, subd. (a)(1), an MMRP has been prepared for the proposed project in order to ensure the enforceability and monitor the implementation of the mitigation measures that have been adopted for the proposed project through a project-specific MMRP (see attached Appendix I). Any long-term monitoring of mitigation measures imposed on the overall Vista Del Mar development evaluated in 2004 (and again in 2008 and 2012), separate and apart from the proposed project, will be implemented through the 2004 FEIR MMRP.

THIS PAGE INTENTIONALLY LEFT BLANK

## SECTION 2: PROJECT DESCRIPTION

### 2.1 - Location and Setting

#### 2.1.1 - Location

The project site is located within the southwest portion of the City of Pittsburg, Contra Costa County, California (Exhibit 1). The project site consists of approximately 57.81 acres and is bounded by California State Route 4 (SR 4) on the north, West Leland Road and the Vista Del Mar Subdivision to the south, the San Marco development, containing residential developments of varying densities, on the west, and an undeveloped area on the east (Exhibit 2). The site is approximately 0.5 miles from the Pittsburg/Bay Point BART Station to the east. In addition, the Keller Canyon Landfill is located approximately 1.5 miles to the southeast of the project site, and a Pacific Gas & Electric (PG&E) transmission line easement is located 1,200 feet to the south of the project site.

#### 2.1.2 - Characteristic of Existing Project Site

The northern boundary of the site, south of SR 4, includes a slight slope gradient between the project site and the highway. There are no notable creeks or ridgelines located on the project site, but intermittent drainage ditches are located throughout and there is evidence of previous grading activity. Along the northern side of the project site is an approximately 7-acre detention basin. Most of the surrounding area is developed with a mix of residential and commercial uses in various densities.

#### 2.1.3 - General Plan and Zoning

The site of the proposed project was originally part of a larger property purchased in 1917 by Virginia Alves for use as a cattle ranch and grazing land. The Alves property served many purposes over the years, including manufacturing, commercial, and ranching endeavors. In 2001, the City of Pittsburg adopted a comprehensive General Plan update designating the Alves property for future development with a mix of open space, residential, and commercial uses. Specifically, the *2001 City of Pittsburg General Plan* ("General Plan") and its accompanying certified EIR anticipated development in Alves Ranch as follows (General Plan Policy 2-P-89.):

- Up to 306 Hillside Low and Low Density units, and 794 Medium and High Density residential units; and,
- Up to 20 acres of Business Commercial between West Leland Road and State Route 4.

The General Plan land use designation for the project site is a combination of *Business Commercial and High Density Residential*. The western portion of the project site is zoned CO-P (Office Commercial with a Master Plan Overlay, Ordinance No. 04-1230) District and the remaining portion of the project site is zoned RH-P (High-Density Residential with a Master Plan Overlay, Ordinance No. 04-1230). The proposed project's design requires a minor modification to the location of some portions of the residential and commercial uses; however, the overall proposed land uses and residential density remain consistent with the development program identified for the Alves site as dictated by the General Plan land use designations (General Plan Figure 2-2) and the Southwest Hills

planning area diagram (General Plan Figure 2-4K). Relevant General Plan Goals and Policies are incorporated throughout the 2004 FEIR and related mitigation measures and remain applicable to this analysis since the proposed project would be required to adhere to all relevant General Plan Policies and Goals.

## 2.2 - Project Background

### 2.2.1 - 2004 Vista Del Mar Certified EIR

In 2004, William Lyon Homes, Inc. and Alves Ranch, LLC submitted a plan to develop approximately 293-acres of the Alves' property as a residential and commercial subdivision, known as the Vista Del Mar development. The 2004 Vista Del Mar project anticipated approximately 1,100 housing units, approximately 257,500 square feet of commercial floor space, an approximately 11.33-acre school/park site, approximately 117.68 acres of permanent hillside open space, associated landscaped buffers, public and private roadways, a detention basin, a water tank site, and a water pump station site. The City prepared the 2004 FEIR to analyze the potential environmental impacts associated with the Vista Del Mar development.

The 2004 EIR contemplated high density residential, business commercial, and detention basin land uses on the 57.81-acre project site north of West Leland Road. The 2004 EIR assumed that the northern portion of the Vista Del Mar development (i.e. the 2018 proposed project site) would include 563 housing units on 32.1 acres and 257,500 square feet of commercial building space on 14.78 acres, along with a 7.56-acre detention/water quality control basin site.

The 2004 EIR identified the significant environmental effects that could result from implementation of the development as well as the ways in which those impacts could be feasibly reduced to less than significant levels, either through the imposition of mitigation measures or through the implementation of specific alternatives. After a detailed analysis and implementation of relevant mitigation measures, the City identified a total of nine significant but unavoidable impacts associated with the 2004 Vista Del Mar development project:

- visual factors (one significant unavoidable impact);
- traffic and circulation (five significant unavoidable impacts);
- cultural and historic resources (one significant unavoidable impact);
- noise (one significant unavoidable impact); and
- air quality (one significant unavoidable impact).

The City concluded that the Vista Del Mar development was generally consistent with the land use designations in the Pittsburgh General Plan and, on October 18, 2004, certified the 2004 Final EIR (FEIR) for the Vista Del Mar development. On November 29, 2004, the City adopted Resolution No. 04-10191 approving CEQA findings, adopting a Statement of Overriding Considerations, and a Mitigation, Monitoring and Reporting Program (MMRP).

After certifying the 2004 FEIR, the City granted a General Plan Amendment to change the distribution of residential densities within the Vista Del Mar development area, executed a development agreement, and amended the zoning for the entire 293-acre site.

CITY OF PITTSBURG • ALVES RANCH PROJECT  
3RD ADDENDUM TO THE 2004 VISTA DEL MAR EIR

THIS PAGE INTENTIONALLY LEFT BLANK

### 2.2.2 - 2008 “Alves Ranch Addendum #1” and 2009 Revised Project

In August 2008, a revised development plan was proposed for the approximately 57.81-acre portion of the 2004 Vista Del Mar development, located north of West Leland Road. These changes contemplated development of up to 308 multifamily units (including 93 affordable housing units), and 170 single-family detached units (478 units total) on 31.7 acres; the plan also included 221,500 square feet of commercial floor space on approximately 14.0 acres. The 2008 development plan required the approval of: 1) a rezoning to establish a Development Master Plan, 2) a vesting tentative subdivision map, and 3) design review. An addendum was prepared to analyze whether the proposed changes were adequately addressed in the 2004 FEIR (“2008 Addendum”). The 2008 Addendum concluded that the revised development plan would contribute to eight of the nine significant unavoidable impacts identified in the 2004 FEIR; however, none of the significant unavoidable impacts involved a new significant impact or a more severe significant impact than those previously identified and addressed in the statement of overriding considerations accompanying the 2004 FEIR. The City considered, but did not approve, the 2008 Addendum in the fall of 2008.

After the preparation of the 2008 Addendum, the City and the applicant continued to refine the revised development plan, making minor changes to the site plan and project design before approving the revisions and the 2008 Addendum on January 20, 2009 (Ordinance No. 08-1312). Differences between the proposal originally analyzed in the 2008 Addendum, and the development ultimately approved by the City on January 20, 2009, were addressed in a letter attached to the 2008 Addendum, dated December 2008. Consistent with the 2004 FEIR, the January 20, 2009, approval ultimately anticipated the development of up to 560 housing units (a slight decrease from the 563 units analyzed in the 2004 FEIR), a 0.6-acre recreational facility, and 221,500 square feet of commercial floor area (a slight decrease from the originally approved 257,000 square feet analyzed in the 2004 FEIR).

### 2.2.3 - 2012 “Vista Del Mar Addendum #2” and 2012 Revised Project

In 2012, the City adopted a second addendum to the 2004 FEIR that analyzed a request to amend the General Plan designations of approximately 20.4 acres of land within the Vista Del Mar development. The amendment changed the 20.4 acres from *Low Density Residential* or *Hillside Low Density Residential* to *Open Space*, and also amended the adopted PD Plan (PD 04-1230) to reflect the changes of the two locations from “Single Family Residential” and “Estate Lots” to “Open Space.” These areas were subsequently included in the Geological Hazard Abatement District (GHAD) established to address and appropriately mitigate the identified geotechnical hazards within the Vista Del Mar development area.

This Vista Del Mar Addendum #2 (“2012 Addendum”) affected the portion of the Vista Del Mar development area south of West Leland Road, which does not involve the project site and thus is not under consideration within this addendum document; however, it suffices as the second addendum document to the 2004 FEIR.

William Lyon Homes is now requesting additional modifications to the initial project design analyzed in the 2004 FEIR and the revised design analyzed in the 2008 Addendum and the 2012 Addendum, as described more fully in Section 2.3, Project Characteristics.

## 2.3 - Project Characteristics

### 2.3.1 - Project Summary

The proposed project consists of the development of the approximately 57.81-acre project site north of West Leland Road with 346 housing units on approximately 25.93 acres and up to 140,000 square feet of retail/commercial uses, including a grocery store of approximately 40,000 square feet, on approximately 12.0 acres. The proposed project also proposes to relocate the retail/commercial uses to the center of the project site, with residential uses to be located on the northern, eastern, and western edges.

As anticipated in the 2004 FEIR, the proposed project includes a detailed development plan for the project site (excluding the detention basin area). Table 1 provides a summary and comparison of the proposed project with the 2004 FEIR land use assumptions, as well as the development plan revisions analyzed in the 2008 Addendum. As shown in Table 1, the proposed project as currently envisioned involves less development than was evaluated and disclosed in the 2004 FEIR and the 2008 Addendum. Exhibit 2 illustrates the preliminary site plan for the proposed project.

**Table 1: Summary of Proposed Project Changes for the Project Site between 2001 and 2018**

| Planning Document                    | Residential Acres | Residential Units | Overall Residential Density | Commercial Floor Area                                                                                |
|--------------------------------------|-------------------|-------------------|-----------------------------|------------------------------------------------------------------------------------------------------|
| 2001 City of Pittsburgh General Plan | —                 | 1,100             | —                           | * The General Plan anticipates up to 20 acres of Business commercial development in the project area |
| 2004 Final EIR                       | 32.10             | 563               | 17.54                       | 257,000 on 14.78 acres                                                                               |
| 2008 Addendum                        | 31.66             | 478               | 15.10                       | 221,500 on 13.98 acres                                                                               |
| 2009 Approved Project                | 31.66             | 560               | 17.70                       | 221,500 on 13.98 acres                                                                               |
| 2012 Addendum and Approved Project   | N/A               | N/A               | N/A                         | N/A                                                                                                  |
| 2018 Proposed Project                | 25.93             | 346               | 13.34                       | 140,000 on 12 acres                                                                                  |

The specific differences between the 2004 FEIR development and the proposed project are described in more detail below.

### 2.3.2 - Proposed Land Uses

**Residential.** The proposed project contemplates a total of up to 346 housing units, as well as 10 accessory dwelling units (ADUs), on approximately 25.5 acres, for an overall residential density of approximately 14 units per acre. As shown on the preliminary site plan (Exhibit 3), the proposal provides for a range of housing types and densities, including:

- 136 “Duet” units on approximately 7.1 acres, for a gross density of 19.15 units per acre;
- 110 “Alley” units on approximately 9.2 acres, for a gross density of 11.96 units per acre; and
- 100 “Traditional” units, as well as 10 ADUs, on approximately 9.2 acres, for a gross density of 10.87 units per acre.

Source: WHA Architects, Planners, Designers.

THIS PAGE INTENTIONALLY LEFT BLANK

The 2004 FEIR previously identified a 32.1-acre RH-D (High Density Residential) District area and provided for development of 563 residential units with an overall residential density of 17.53 units per acre. The 2008 Addendum analyzed the reduced development of 478 units in the project area for an overall density of 15.10 units per acre, but the City ultimately approved 560 units with a density of 17.70 units per acre.

The proposed project includes fewer single-family attached units (393 compared to 136 units) and slightly more single-family detached lots (167 compared to 210). Overall, the proposed project includes 214 fewer housing units and a lower overall residential density compared to the 2009 approval.

The location of residential uses would be adjusted, as compared to the location identified in the 2004 FEIR and the 2009 approval. As shown in Exhibit 3, Neighborhoods A2 (comprising 60 units) and D (comprising 100 units) would be located along the western side of the project site, which is currently zoned CO-P District. This change would improve circulation, site accessibility, and compatibility with neighboring residential uses; however, it would require a zoning change/master plan amendment to allow residential development in this area.

**Residential Open Space and Trails.** The proposed project contemplates several open space areas. A total of approximately 0.9 acre for pedestrian circulation and/or active recreation and a total of approximately 1.28 acres of landscaped and irrigated open space are contemplated. The open space areas would be owned and maintained by the homeowners association(s) of the adjoining neighborhoods.

As part of the proposed project, an approximately 12-foot-wide Class I trail would be constructed on the north side of West Leland Road along the project frontage, connecting to an existing sidewalk to the west. Therefore, subsequent to the completion of the proposed project, the sidewalk gap would be reduced to approximately 1,100 feet on the north side of West Leland Avenue between Woodhill Drive and the BART access roadway. Class II bicycle facilities are provided on West Leland Road, which would not be altered as a result of the proposed project.

**Retail/Commercial.** The proposed project contemplates approximately 140,000 square feet of general commercial uses on approximately 12 acres. As part of the retail/commercial component, the proposed project contemplates approximately 40,000 square feet for development of a grocery store. The retail/commercial portion of the proposed project would be relocated from the western side to the center of the site. Circulation would be modified to accommodate this revision.

The 2004 FEIR included 257,500 square feet of business commercial floor area on 14.78 acres and the 2008 Addendum analyzed 221,500 square feet of business commercial floor area on 13.98 acres. The proposed project would therefore remain within the square footages evaluated and disclosed in the 2004 FEIR and the 2008 Addendum, and would remain consistent with the land uses anticipated in the 2001 General Plan.

**Utility Infrastructure.** The capacity of the existing stormwater detention facility on-site would be increased to a total of approximately 6.2 acre-feet as part of the proposed project design to

accommodate anticipated stormwater peak discharges. The increase in capacity will be accomplished by raising the outfall by 2 feet, thereby accommodating more water in the facility.

**Roadway Infrastructure.** Access to the residential portion of the project site is proposed from two locations on West Leland Road. As part of the proposed project, Alves Ranch Road would be extended north into the site and would form the fourth leg of an existing signalized intersection with West Leland Road. A full access unsignalized intersection is also proposed on West Leland Road, west of Alves Ranch Road. This unsignalized intersection would be off-set from Tomales Bay Drive, which would remain a right-in/right-out side-street stop-controlled intersection. A separate entrance to the commercial portion of the project off of West Leland Road would also be constructed at a later date. An additional emergency vehicle access location would be provided on the eastern portion of the site south of Neighborhood C, approximately 750 feet east of Alves Ranch Road.

## 2.4 - Discretionary Approvals

The proposed project requires the following discretionary approvals from the City of Pittsburgh:

- Rezoning
- Vesting Tentative Subdivision Map
- Design Review

## SECTION 3: CEQA CHECKLIST

The purpose of the checklist is to evaluate the categories in terms of any changed condition (e.g., changed circumstances, project changes, or new information of substantial importance) that may result in a changed environmental result that could trigger additional environmental review (e.g., a new significant impact or substantial increase in the severity of a previously identified significant effect) (*CEQA Guidelines* Section 15162).

The questions posed in the checklist come from Appendix G of the *CEQA Guidelines*. A “no” answer does not necessarily mean that there are no potential impacts relative to the environmental category, but rather that there is no change in the condition or status of the impact since it was analyzed and addressed with mitigation measures in the FEIR. These environmental categories might be answered with a “no” in the checklist, since the proposed project does not introduce changes that would result in a modification to the conclusion of the previously approved CEQA document.

This 3<sup>rd</sup> addendum addresses the conclusions of the 2004 FEIR.

### 3.1 - Explanation of Checklist Evaluation Categories

#### (1) Conclusion in 2004 FEIR and Related Documents

This column summarizes the conclusion of the 2004 FEIR relative to the environmental issue listed under each topic.

#### (2) Do the Proposed Changes Involve New Impacts?

Pursuant to *CEQA Guidelines* Section 15162, subd. (a)(1), this column indicates whether the changes represented by the proposed project will result in new significant environmental impacts not previously identified or mitigated by the 2004 FEIR or whether the changes will result in a substantial increase in the severity of a previously identified significant impact.

#### (3) New Circumstances Involving New Impacts?

Pursuant to *CEQA Guidelines* Section 15162, subd. (a)(2), this column indicates whether there have been substantial changes with respect to the circumstances under which the proposed project is undertaken that will require major revisions to the 2004 FEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

#### (4) New Information Requiring New Analysis or Verification?

Pursuant to *CEQA Guidelines* Section 15162, subd. (a)(3)(A–D), this column indicates whether new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the 2004 FEIR was adopted, shows any of the following:

- (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
- (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;
- (C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
- (D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

If the additional analysis completed as part of this addendum were to find that the conclusions of the 2004 FEIR remain the same such that no new significant impacts are identified, or identified impacts are not found to be substantially more severe, or additional mitigation is not necessary, then the question would be answered “no” and no additional environmental review would be required.

## **(5) Mitigation Measures Implemented to Address Impacts**

Pursuant to CEQA Guidelines Section 15162, subd. (a)(3), this column indicates whether the 2004 FEIR provided mitigation measures to address effects in the related impact category. Any previously adopted mitigation measures will be identified. The addendum analyses will also address whether any proposed revisions to previously adopted mitigation measures are recommended. These mitigation measures will be implemented with the construction of the 2018 proposed project, as applicable. If “N/A” is indicated, the 2004 FEIR concluded that the impact either would not occur or is not significant, and, therefore, no additional mitigation measures are needed.

## **3.2 - Discussion and Mitigation Sections**

### **(1) Discussion**

A discussion of the elements of the checklist is provided under each environmental category in order to clarify the answers. The discussion provides information about the particular environmental issue (both with respect to the original 2004 FEIR and the 2018 proposed project), how the proposed project relates to the issue, and the status of any mitigation that may be required or that has already been implemented.

### **(2) Mitigation Measures**

Applicable mitigation measures from the 2004 FEIR that apply to the proposed project are listed under each environmental category. It was determined that no new mitigation measures beyond those identified in the 2004 FEIR are necessary for purposes of addressing impacts of the 2018 proposed project.

### (3) Conclusions

A discussion of the conclusion relating to the analysis is contained in each section.

| Environmental Issue Area                                                                                                                                                  | Conclusion in 2004 FEIR                                                                              | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|---------------------------------------------------------------------|---------------------------------------------------------|-------------------------------------------------------------|
| <b>I. Aesthetics</b>                                                                                                                                                      |                                                                                                      |                                                                         |                                                                     |                                                         |                                                             |
| <i>Would the project:</i>                                                                                                                                                 |                                                                                                      |                                                                         |                                                                     |                                                         |                                                             |
| a) Have a substantial adverse effect on a scenic vista?                                                                                                                   | Less than significant with mitigation                                                                | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2                                                 |
| b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?                  | Less than significant with mitigation                                                                | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2                                                 |
| c) Substantially degrade the existing visual character or quality of the site and its surroundings?                                                                       | Significant and unavoidable (only with respect to Impact 5-3 related to power lines) with mitigation | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2 (MM 5-3 does not apply to the proposed project) |
| d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?                                                     | Less than significant with mitigation                                                                | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2                                                 |
| e) Conflict with any applicable land use plan, policy, or regulation adopted by the City of Pittsburg for the purpose of avoiding or mitigating an adverse visual impact? | Less than significant with mitigation                                                                | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2                                                 |

## Discussion

Aesthetic impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis of visual factors. The 2004 FEIR identified three potential impacts utilizing the above environmental issue areas from Appendix G of the 2004 State CEQA Guidelines as thresholds of significance. Impacts 5-1, 5-2, and 5-3 and the related aesthetics impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR did not identify any significant impacts to scenic views or vistas as a result of the Vista Del Mar development. The 2004 FEIR did conclude that the proposed conversion of the northern portion of the Vista Del Mar development area to high density residential and business commercial development could result in a substantial degradation of the visual character and quality of this area as viewed from community vantage points to the north and east (Impact 5-1). The City concluded that this potential impact associated with development would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measures 5-1 and 5-2.

### Proposed Project Analysis and Conclusion

The proposed project is on a portion of the same site as the Vista Del Mar development previously analyzed in the 2004 FEIR and contemplates the same general uses. The proposed project contemplates less commercial acreage and a minor shift in the location of the commercial component of the proposed project from the western side to the center of the site; however, the overall footprint of the proposed project does not differ from the previously approved project. In addition, the proposed project contemplates buildings of the same height and character as previously approved and would be required to comply with all relevant requirements of 2004 FEIR Mitigation Measures 5-1 and 5-2. Residential building heights would range from 25 feet to 30 feet depending on the architectural style of the proposed residential development. The residential areas of the proposed project would include landscaping, sloping rooflines, and natural materials in keeping with General Plan Goal 4-G-5 emphasis on maintaining the rural character of the area. Commercial buildings would be limited to 35 feet.

The proposed project would be required to adhere to the relevant policies and programs set out in the 2004 FEIR. No new scenic vistas, corridors, resources, or views in the project vicinity have been established. For the reasons set forth above, the proposed project would not result in any significant visual changes beyond those analyzed in the 2004 FEIR, and impacts would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

There are no designated State scenic highways in the City (California Scenic Highway Mapping System, 2016), and there has been no change in the designation of SR 4 through the project site for the proposed project. Therefore, the proposed project would not impact the scenic resources of any state designated scenic highway. However, as noted in the 2004 FEIR, the segment of SR 4 north of the project site is a County-designated Scenic Highway. Accordingly, the 2004 FEIR (as well as the 2008 Addendum) extensively discussed potential impacts on the views from SR 4. In the discussion of Impact 5-1 and 5-2, the 2004 FEIR concluded that development of residential and commercial uses contemplated on the project site, while consistent with the General Plan, could substantially change the character and quality of views from SR 4. 2004 FEIR Mitigation Measure 5-2 incorporates several design requirements to reduce the impact to views from SR 4, including limits on building heights, the imposition of appropriate setbacks, and the inclusion of landscaping. The City also refined 2004 FEIR Mitigation Measure 5-2 when making project approvals in 2009 to require that adequate landscaping be placed along the outer edge (southern side) of the SR 4 sound wall. With these mitigation measures, the City concluded that development north of West Leland Road on the project site would result in less than significant impacts related to the County-designated Scenic Highway.

**Proposed Project Analysis and Conclusion**

The site of the proposed project is located on the same parcels previously analyzed and proposed development would remain within the same footprint; however, the proposed project contemplates slightly less overall development, which would further reduce the visual impact of buildings. As shown in Exhibit 3, the proposed project would provide vegetation along West Leland Road and between SR 4, consistent with applicable General Plan policies and 2004 FEIR Mitigation Measure 5-2. The reduced density would allow for visual separations between buildings sufficient to preserve through views of the hills from SR 4 as contemplated in 2004 FEIR, and would not result in any new or increased significant impacts to SR 4, because the proposed project does not contemplate any new or increased development activity than what was previously assumed.

2004 FEIR Mitigation Measure 5-1 and 5-2 remain applicable to the proposed project, and would be enforced through implementation of the proposed project's MMRP. Additionally, there has been no change in the designation of SR 4 that would require additional analysis. Similar to the 2004 FEIR, impacts of the proposed project would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

In 2004 FEIR Impact 5-3, it was determined that the publicly accessible areas proximate to the proposed homes closest to PG&E's electrical transmission lines would have views that were substantially and adversely diminished. However, this impact is not applicable to the proposed

project. Impact 5-3 is specific to the publicly accessible areas proximate to residences within 200 feet of the PG&E transmission line easement. The proposed project is located approximately 1,200 feet north of the transmission line; therefore, this impact is not applicable to the proposed project, and no further analysis of this impact is required.

In Impact 4-3, the 2004 FEIR indicated that the residential development densities may conflict in visual character and scale with the adjoining Oak Hills Park neighborhood; effects that may be inconsistent with the General Plan, which calls for project compatibility with existing surrounding land uses and use of buffering to separate incompatible uses. As described in 2004 FEIR Impacts 5-1 and 5-2, it was also determined that the proposed conversion of the northern portion of the Vista Del Mar development area to high-density residential and business commercial development could result in a substantial degradation of the visual character and quality of the area. To mitigate potential impacts, the City adopted 2004 FEIR Mitigation Measures 5-1 and 5-2. These mitigation measures require that new developments include an overall layout and grading plan, and associated set of design standards and controls for grading, creekway and landform protection, individual site and architectural design (including individual custom lot architectural design), common and private landscaping, public and private roadways, and implementation of light and glare (including outdoor lighting) plans. The criteria in 2004 FEIR Mitigation Measures 5-1 and 5-2 further limit building heights, identify the need for visual separations, and require landscaping surrounding the development to visually screen commercial and residential development on the project site. The City concluded that, with the exception of the significant and unavoidable impact identified in Impact 5-3, development was consistent with the applicable provisions of the General Plan and implementation of the proposed design guidelines and mitigation measures reduced the impact to visual character and quality to a less than significant level.

### **Proposed Project Analysis and Conclusion**

Development under the proposed project contemplates buildings on the same site and of similar character as previously analyzed. The density of development would be substantially reduced from the previously approved 560 residential units (as revised pursuant to the 2008 Addendum) to 346 units, and the commercial portion of the project would be substantially reduced from 221,500 square feet to 140,000 square feet. The reduction in density and intensity would further reduce aesthetic impacts associated with the buildings themselves and would not result in any increased significant impact or new significant impact as compared to the greater development density and intensity analyzed in the 2004 FEIR. The proposed project would be required to comply with 2004 FEIR Mitigation Measures 5-1 and 5-2, which limit building heights, require visual separations, and require landscaping surrounding the development to visually screen the commercial and residential development. Further, the proposed project includes landscaping in both the residential and commercial areas of the project and establishes setbacks. The proposed project also incorporates open space amenities into the design of the residential neighborhoods (in keeping with GP goals and policies 24'–26, 24'–89, 4-G-4, 4-P-9) which further lessens the visual impact consistent with the development contemplated by the 2004 FEIR. As stated in the 2004 FEIR, all design refinements must be incorporated in the proposed project to the satisfaction of the Planning

Commission, as determined through the City's normal design review process. Similar to the 2004 FEIR, impacts would be less than significant. Therefore, impacts to the visual character or quality of the site associated with implementation of the proposed project have already been accounted for and analyzed within the 2004 FEIR, and no new significant impacts or any substantial increase in the severity of previously identified significant impacts would occur.

**d) Summary of 2004 FEIR**

The 2004 FEIR did not identify any significant light or glare impacts associated with development of residential and commercial uses on the project site. However, the 2004 FEIR required implementation of 2004 FEIR Mitigation Measures 5-1 and 5-2 which would further reduce potential aesthetic impacts related to light and glare to ensure they remain less than significant.

**Proposed Project Analysis and Conclusion**

The proposed project would involve commercial and residential development that is generally consistent with what was previously envisioned and analyzed in the 2004 FEIR and later approved pursuant to the 2008 Addendum. The proposed project contemplates a reduction in residential density and commercial square footage compared to the previously approved project and would not involve any land uses or operations that would cause an increase in the potential for light and/or glare impacts beyond what was previously analyzed. Therefore, the proposed project would not result in any changes to the previously certified EIR associated with light or glare. Nonetheless, the applicable mitigation measures set forth within the previous 2004 FEIR would be required. As identified in the Mitigation Monitoring and Reporting Plan, the proposed project would be required to comply with 2004 FEIR Mitigation Measures 5-1 and 5-2 and all applicable General Plan policies and goals. Similar to the 2004 FEIR, impacts would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR found that development of the project site was generally consistent with the General Plan and other applicable land use policies related to avoiding or mitigating an adverse visual effect. To ensure that development would be consistent, the City adopted 2004 FEIR Mitigation Measures 5-1 and 5-2 incorporating General Plan goals and policies. Incorporation of these mitigation measures and general plan goals and policies would reduce impacts to a less than significant level.

**Proposed Project Analysis and Conclusion**

The proposed project contemplates a similar mix of commercial and residential uses, at reduced density and intensity, on the same site as the previously analyzed and approved project. The proposed project would be required to adhere to 2004 FEIR Mitigation Measures 5-1 and 5-2 and all applicable General Plan goals and policies. Compliance with 2004 FEIR

Mitigation Measure 5-2 includes specific requirements with respect to views from SR 4 to ensure that the proposed project is consistent with the City's General Plan goals and policies. Similar to the 2004 FEIR, impacts would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Aesthetics mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 5-1** To minimize the degree of project-specific adverse impact on the visual character and quality of the project site, the project shall include an overall layout and grading plan, and associated set of design standards and controls for grading, creekway and landform protection, individual site and architectural design (including individual custom lot architectural design), common and private landscaping, public and private roadways, and light and glare (including outdoor lighting), which to the satisfaction of the Pittsburgh Planning Commission, as determined through the City's design review process, will sufficiently minimize the degree of adverse impact on the general visual character of the project site. Based upon related land use and urban design goals and policies set forth in the City of Pittsburgh General Plan and General Plan EIR, these project design refinements should include some combination of the following:
- Incorporate natural creeks and open space amenities into the design of project residential neighborhoods (in keeping with GP goals and policies 24'-26, 24'-89, 4-G-4, 4-P-9).
  - Maintain the general character of on-site hill forms (in keeping with GP goals 2-G-31 and 2-P-89).
  - Plant trees and other vegetation along West Leland Road and other project collector and arterial roadways in order to maintain the sense of "rural" open space at the City's southern boundary (in keeping with GP policy 4-P-6).
  - Consider use of single-loaded peripheral residential streets at the southern and western edges of the project residential areas south of West Leland Road in order to encourage residential development at these outer edges to face outwards toward the rural landscape and prevent a solid wall of residential backyard fences (in keeping with GP policy 4-P-7).
  - Map all on-site natural features as part of future project development applications, including landforms, rock outcroppings, creekways and ridgelines, and during development and design review, ensure that site layouts are sensitive to these mapped features (in keeping with GP policy 4-P-9).

- Emphasize a sense of rural character in the design and construction of project hillside homes, including extensive landscaping, sloping rooflines, and use of natural materials (in keeping with GP goal 4-0-5).
- Preserve on-site natural creeks and drainage courses as close as possible to their natural locations (in keeping with GP policy 4-P-14).
- Encourage flexible (varying) residential setbacks in hillside residential areas (in keeping with GP policy 4-P-18 and GP Figure 4-5).
- Encourage architectural designs in hillside residential areas that reflect the undulating forms of the hillside setting, such as “breaking” buildings and rooflines into several smaller components (in keeping with GP policy 4-P-23 and GP Figure 4-6). Building forms in such areas should be “stepped” to conform to site topography.
- Encourage residential rooflines that are oriented in the same direction as the natural hillside slope (in keeping with GP policy 4-P-25).
- Use building colors and textures reflective of the surrounding hillside landscape, with roof colors tending toward darker earth tones so that they are less visible from adjacent and upslope on-site and off-site vantage points (in keeping with GP policy 4-P-26). Use irregular planting on graded slopes to achieve a natural appearance (in keeping with GP policy 4-P-27).
- **Use irregular planting on graded slopes to achieve a natural appearance (in keeping with GP policy 4-P-27)**
- To the extent possible, align project residential streets along natural grades (in keeping with GP policy 4-P-28).
- Encourage construction of split roadways in steeper hillsides where appropriate (in keeping with GP policy 4-P-29).
- Provide on-street parking along hillside road in parking bays where topography allows (GP policy 4-P31).

**MM 5-2**

In addition to those listed under Mitigation 5-1, at later phases of the project (when detailed, design level applications are submitted for areas north of West Leland Road), incorporate the following design refinements into the project to the satisfaction of the Planning Commission:

- Ensure that proposed residential development in the project designated High Density Residential area is oriented with the lowest building heights adjacent to SR 4, and set back from the edge of SR 4 sufficiently to mitigate visual impacts (in keeping with GP goal 2-P-87).
- As part of the subsequent development review process, limit building heights and massing in the designated Business Commercial area and/or maintain visual separations within the area, sufficient to preserve through views of the hills from SR 4 and the Bay Point community north of SR 4 (in keeping with GP policy 4-P-3).
- Emphasize beautification of the SR 4 corridor in project landscape plans through a sensitive combination of highway edge landscaping and significant view corridor preservation (in keeping with GP Goal 4-0-12).

- Ensure that all on-site multifamily residential development proposed along SR 4 provides adequate landscaping along related new sound barriers (berms or walls—see Mitigation 14-1 in chapter 14, Noise) (in keeping with GP policy 4-P-64).
- **Ensure that adequate landscaping is placed along the outer edge (northern side) of the SR 4 sound wall (2008 Addendum).**

## Conclusion

The aesthetic resource conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                       | Conclusion in 2004 FEIR | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

## Discussion

Agricultural resources impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potential significant impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development would convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural uses. As described in the 2004 FEIR, the project site is classified as grazing land by the California

Department of Conservation, and does not include any lands designated as Prime, Unique, or of Statewide Importance. Accordingly, the project would have no impact in this regard.

### **Proposed Project Analysis and Conclusion**

The project site is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as noted in the 2004 Draft EIR. Similar to the 2004 FEIR, the proposed project—which involves the same overall development footprint but with reduced density and intensity of uses—would not convert designated Important Farmland as described previously to a non-agricultural use. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **b) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would conflict with an existing zoning for agricultural use or Williamson Act contract. As discussed in the 2004 FEIR, the project site does not contain any land zoned for agricultural use or land under Williamson Act contract. Accordingly, the project would have no impact in this regard.

### **Proposed Project Analysis and Conclusion**

Similar to the analysis in the 2004 FEIR, the project site does not contain any land zoned for agricultural use or land under Williamson Act contract. Accordingly, the project would have no impact in this regard. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **c) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would result in other changes that could lead to the conversion of Important Farmland to other non-agricultural use.

In Impact 4-2, the 2004 FEIR indicated that the residential boundary of the southern portion of the development site was adjacent to the Seecon property, which was under Williamson Act contract and actively grazed. The 2004 FEIR included a Mitigation Measure 4-2, which required notification to all prospective residents regarding the potential nuisances associated with abutting or nearby animal grazing. The implementation of Mitigation Measure 4-2 was found to reduce potential impacts to less than significant.

### **Proposed Project Analysis and Conclusion**

The 2018 proposed project is located north of West Leland Road, and would not result in the potential conflicts identified in the 2004 FEIR for the residential lots in the southern portion of the site. Accordingly, Mitigation Measure 4-2 would not apply to the 2018 proposed project, and no impact would occur in this regard. Therefore, the proposed project would not

introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **Mitigation Measures**

No mitigation is required.

### **Conclusion**

The agricultural resources conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                   | Conclusion in 2004 FEIR                     | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| <b>III. Air Quality</b>                                                                                                                                                                                                                                                                    |                                             |                                                                         |                                                                     |                                                         |                               |
| <i>Would the project:</i>                                                                                                                                                                                                                                                                  |                                             |                                                                         |                                                                     |                                                         |                               |
| a) Conflict with or obstruct implementation of the applicable air quality plan?                                                                                                                                                                                                            | Less than significant                       | No                                                                      | No                                                                  | No                                                      | N/A                           |
| b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?                                                                                                                                                                         | Significant and unavoidable with mitigation | No                                                                      | No                                                                  | No                                                      | 15-2                          |
| c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)? | Significant and unavoidable with mitigation | No                                                                      | No                                                                  | No                                                      | 15-2                          |
| d) Expose sensitive receptors to substantial pollutant concentrations?                                                                                                                                                                                                                     | Less than significant with mitigation       | No                                                                      | No                                                                  | No                                                      | 15-1                          |
| e) Create objectionable odors affecting a substantial number of people?                                                                                                                                                                                                                    | N/A                                         | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Air quality impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified three potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of

significance. 2004 FEIR Impacts 15-1 and 15-2 and the related air quality impact discussions collectively address the above environmental issue areas as described below.

**a) Summary of 2004 FEIR**

When the 2004 FEIR was approved, the Bay Area was a designated nonattainment area for State and national ozone ambient air quality standards and as a nonattainment area for the state particulate matter (PM) standards for PM measuring 10 micrometers in diameter or less (PM<sub>10</sub>). The Bay Area Air Quality Management District (BAAQMD) prepares plans to attain ambient air quality standards in the San Francisco Bay Area Air Basin (SFBAAB), including ozone attainment plans for the national ozone standard and clean air plans for the California standard. The applicable plan at the time of the 2004 FEIR was the 1997 Clean Air Plan. No State PM<sub>10</sub> was prepared or required.

Projects that are consistent with the assumptions used in development of the 1997 Clean Air Plan are considered to not be in conflict with or otherwise obstruct the attainment of air quality levels identified in the relevant plan. Assumptions for emission estimates are based on population, employment, and land use projections taken from local and regional planning documents. As discussed in the 2004 FEIR, the contemplated development of up to 563 housing units and 257,500 square feet of commercial building space was generally consistent with the 2001 General Plan land use designations and maximum development capacities. As a result, the City concluded that impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

Since the 2004 FEIR, BAAQMD has adopted the *2017 Clean Air Plan: Spare the Air, Cool the Climate*. The *2017 Clean Air Plan* incorporates the level of development assumed in the 2001 General Plan, which is consistent with the level contemplated by the proposed project. In fact, since the proposed project contemplates the development of 346 housing units compared to 563 housing units under the 2004 FEIR, the proposed project would result in a decrease in development intensity compared to the 2004 FEIR. Also, the proposed project would result in a decrease in the total commercial floor area from 257,000 square feet to approximately 140,000 square feet. Similar to the 2004 FEIR, the proposed project would result in a less than significant impact. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR determined that long-term operational emissions from the Vista Del Mar development could violate an ambient air quality standard or contribute substantially to an existing violation (Impact 15-2). Using the current model at the time of the analysis (URBEMIS 2002), the 2004 FEIR found that the Vista Del Mar development would generate 119 pounds per day of reactive organic gases (ROG), 121 pounds per day of nitrogen oxides (NO<sub>x</sub>), and 113 pounds per day of PM<sub>10</sub>. Those emissions exceeded the recommended threshold of 80 pounds

per day. This would result in potentially significant impacts. The 2004 FEIR Mitigation Measure 15-2 requires the proposed on-site commercial components to implement strategies to reduce traditional vehicle usage. However, even with implementation of 2004 FEIR Mitigation Measure 15-2, the City concluded that impacts would still be significant and unavoidable.

### **Proposed Project Analysis and Conclusion**

The BAAQMD *CEQA Air Quality Guidelines* include thresholds of significance that are applied to evaluate regional impacts of project-specific emissions of air pollutants and their impact on BAAQMD's ability to reach attainment (BAAQMD, 2017). These thresholds have been revised from 80 pounds per day for ROG, NO<sub>x</sub>, and PM<sub>10</sub> in the 1999 BAAQMD *CEQA Guidelines* to 54 pounds per day for ROG and NO<sub>x</sub> and 82 pounds per day for PM<sub>10</sub> in the 2017 BAAQMD *CEQA Guidelines*. The proposed project would result in a decrease in both the number of residential units and the square footage of commercial development compared to the 2004 FEIR. However, in terms of long-term operational impacts, the proposed project would generate a total of 7,810 trips per day, which is a slight increase from the estimate of 7,550 trips per day in the 2004 FEIR. This results in a net increase of 260 trips, or a nominal 3.4 percent increase from the estimate in the 2004 FEIR.

Although the overall daily trip generation would increase slightly from the previous estimates based on the changes in the commercial land use characteristics, the proposed project is anticipated to begin construction and operation in 2018, a much later date than assumed in the 2004 FEIR. In later years, advancements in engine technology, tailpipe emission standards, and turnover in the vehicle fleet result in lower emission rates. Therefore, even with the slight increase in vehicle trips associated with the proposed project, the decrease in the fleet average exhaust emission rates would offset the emissions from those nominal numbers of additional trips.

Consistent with the 2004 FEIR, emissions from the proposed project would be anticipated to exceed the recommended thresholds of significance. Implementation of 2004 FEIR Mitigation Measure 15-2 would be required. Considering the changes to the trip generation rates, emission factors, and recommended thresholds of significance, proposed project impacts would continue to remain significant and unavoidable. However, due to more stringent emissions standards and other technology as discussed above, the proposed project and minor increase in daily trips would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **c) Summary of 2004 FEIR**

According to the 2004 FEIR, BAAQMD guidance provides that projects that would individually have a significant regional air quality impact would also be considered to have a significant cumulative regional air quality impact. The development evaluated in the 2004 FEIR exceeded the thresholds of significance, and therefore, the City concluded that there would be a significant and unavoidable impact.

### **Proposed Project Analysis and Conclusion**

As discussed in III(c) above, the development evaluated in the 2004 FEIR would exceed thresholds of significance with respect to long-term operational impacts and result in significant and unavoidable impacts. Similarly, the proposed project would exceed thresholds of significance and result in significant and unavoidable impacts. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **d) Summary of 2004 FEIR**

The BAAQMD CEQA Guidelines consider particulate matter to be the pollutant of greatest concern with respect to construction activities. BAAQMD does not have quantitative emission thresholds for fugitive dust. Fugitive dust emissions from construction activities can be greatly reduced by implementing specified control measures. BAAQMD recommends that all projects, regardless of the level of average daily emissions, implement applicable best management practices (BMPs), including those listed in the BAAQMD CEQA Guidelines.

The 2004 FEIR discussed construction activities, such as excavation and grading operations, that would generate exhaust emissions and fugitive particulate matter emissions that could result in elevated levels of particulate matter, creating a possible nuisance at residential, school, and other nearby properties. This represents a potentially significant Impact. The City concluded that implementation of the control measures included in 2004 FEIR Mitigation Measure 15-1 would be expected to reduce this impact to less-than-significant level.

### **Proposed Project Analysis and Conclusion**

#### *Construction*

Diesel exhaust poses both a potential health and nuisance impact to nearby receptors. The California Air Resources Board (CARB) has identified particulate matter from diesel-fueled engines as a toxic air contaminant (TAC). High-volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic were identified as having the highest associated health risks from TACs. The dose, including the concentration of TACs and the exposure time, to which receptors are exposed is the primary factor used to determine health risk. Construction activities would occur intermittently for a short duration (approximately 30 months) at various locations on the project site, and at varying distances from sensitive receptors. Because of the relatively short duration of construction activities, and the majority of emission sources being located at varying distances from nearby receptors (ranging from 50 feet to 1,000 feet from the nearest receptors as equipment operates across the project site ), health risks due to diesel PM emissions would be less than significant and therefore, consistent with the 2004 FEIR.

Construction impacts of the proposed project would be similar to the analysis presented in the 2004 FEIR. Although there would be some decrease in the overall construction schedule and

amount of equipment required based on the reduced scale of proposed development, 2004 FEIR Mitigation Measure 15-1 would still be required to reduce fugitive dust emissions and ensure impacts remain less than significant.

#### *Operation*

Operation of the proposed project would involve residential and commercial land uses that would not be a substantial source of TAC emissions. As a result, implementation of 2004 FEIR Mitigation Measure 15-1 would ensure the proposed project's potential impacts are less than significant, similar to what was evaluated in the 2004 FEIR.

The proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **e) Summary of 2004 FEIR**

The 2004 FEIR did not address impacts associated with whether the Vista Del Mar development would create objectionable odors.

#### **Proposed Project Analysis and Conclusion**

The land uses associated with the proposed project would be residential and commercial, which are not typically a generator of odor emissions, either during construction or as part of long-term operations. Therefore, the proposed project would not create objectionable odors affecting a substantial number of people. The proposed impact would be less than significant. The proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR.

### **Mitigation Measures**

Air Quality mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 15-1      Implement the following dust control measures during project construction activities:**
- (a) Water all active construction areas at least twice daily and more often during windy periods Active areas adjacent to existing land uses must be kept damp at all times or must be treated with non-toxic stabilizers or dust palliatives;**
  - (b) Cover all trucks hauling soil sand and other loose materials or require all trucks to maintain at least two feet of freeboard;**
  - (c) Pave or apply water three times daily or apply non-toxic soil stabilizers on all unpaved access roads parking areas and staging areas at construction sites;**
  - (d) Sweep daily (preferably with water sweepers) all paved access roads, parking areas and staging areas at construction sites;**

- (e) Sweep streets daily (preferably with water sweepers) if visible soil material is carried onto adjacent public streets;
- (f) Hydroseed or apply non-toxic soil stabilizers to inactive construction areas;
- (g) Enclose, cover or water twice daily or apply non-toxic soil binders to exposed stockpiles (dirt, sand, etc.);
- (h) Limit traffic speeds on unpaved roads to 15 miles per hour;
- (i) Install sandbags or other erosion control measures to prevent silt runoff from grading onto adjacent roadways paths and other paved areas and in particular into nearby drainage channels;
- (j) Replant vegetation in disturbed areas as quickly as possible;
- (k) Install windbreaks or plant trees as vegetative wind breaks at windward side(s) of construction areas;
- (l) Limit excavation and grading activity when winds' instantaneous gusts result in unmanageable dust; and
- (m) Limit the area subject to excavation grading and other construction activity at any one time.

**MM 15-2** Require on-site business commercial (office and retail) components of the project to implement strategies identified in the 2004 FEIR to reduce conventional vehicle usage by encouraging pedestrian bicycle and transit modes of travel. **Require project residential components to provide for strategies identified in the 2004 FEIR to reduce air emissions and encourage telecommuting.**

## Conclusion

The air quality conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                                         | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

## Discussion

Biological resources impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis of biological resources. Exceptions include 2004 FEIR Mitigation Measure 11-2 that pertains to permits that have already been acquired and implemented, and Mitigation Measure 11-5 that pertains to areas south of West Leland Road. The remaining mitigation measures from the 2004 FEIR that identified potential impacts utilizing the above environmental issue areas from Appendix G of the 2004 State CEQA Guidelines as thresholds of significance are discussed below.

- a) **Summary of 2004 FEIR.** The 2004 FEIR identified several species of concern on the Vista Del Mar development area. As a result, potentially significant impacts could occur. Therefore, the 2004 FEIR identified Mitigation Measures 11-3 through 11-10, which require that biological

surveys be conducted on-site prior to construction, and any mitigation imposed by the resource agencies be implemented, thereby ensuring that significant impacts to special status species are avoided or reduced to a less than significant level. The City concluded that impacts would be reduced to less than significant with incorporation of the above-identified mitigation.

### **Proposed Project Analysis and Conclusion**

The project site has already been graded as part of the Vista Del Mar development, which was constructed on the south side of West Leland Road between 2009 and 2015. However, for purposes of a conservative analysis and in accordance with the applicable mitigation measures, biological site surveys on the project site were conducted in June 2018 and found that no species of concern were present on-site. In addition, as noted in the June 2018 biological memorandum prepared in connection with this CEQA Addendum (Appendix A), no new significant biological resource issues were found on the site.

The proposed project would not trigger any significant impacts to biological resources beyond those analyzed in the 2004 FEIR, since the 2018 proposed project involves the same general uses within the same footprint. Therefore, similar to the findings in the 2004 EIR, impacts would be potentially significant with regard to potential impacts to certain identified species of concern. Implementation of 2004 FEIR Mitigation Measure 11-3, 11-4, and 11-6 through 11-10 would reduce impacts to less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

- b) Summary of 2004 FEIR.** The 2004 FEIR originally found that the development of the Vista Del Mar development area may be inconsistent the City's General Plan policies as they pertain to drainages and riparian areas or other sensitive habitats. The area to the south of West Leland Road includes seasonal creeks and drainages, with scattered trees and scrub cover that could provide habitat for nesting bird species.

The City concluded that the potential impact was less than significant with incorporation of 2004 FEIR Mitigation Measure 11-2, which required completion of a wetland delineation and implementation of any mitigation imposed. Since that time, 2004 FEIR Mitigation Measure 11-2 was fulfilled, as the wetland delineation was prepared and certified by the US Army Corps of Engineers (USACE), and a Wetlands Mitigation and Monitoring Plan was submitted, approved, and implemented, including the creation of mitigation ponds as required by the permit conditions.

### **Proposed Project Analysis and Conclusion**

The proposed project, which involves the same types of uses within the same general footprint as previously evaluated, but at a lower overall density and intensity, would not result in any new significant impacts to riparian or other sensitive habitats. The creeks and seasonal wetlands identified in the 2004 FEIR are located to the South of West Leland Road and would not therefore be affected by the 2018 proposed project. Therefore, the proposed project

would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 EIR originally found that construction of the Vista Del Mar development may be inconsistent the City's General Plan policies as they pertain to drainages and wetlands. However, the City concluded that the impact was less than significant with incorporation of 2004 EIR Mitigation Measure 11-2, which required completion of a wetland delineation and implementation of any mitigation imposed. Since that time, 2004 EIR Mitigation Measure 11-2 was fulfilled, as the wetland delineation was prepared and certified by the USACE, and a Wetlands Mitigation and Monitoring Plan was prepared, approved, and implemented, including the creation of mitigation ponds as required by the permit conditions.

**Proposed Project Analysis and Conclusion**

The proposed project, which involves the same types of uses within the same general footprint as previously evaluated, but at a lower overall density and intensity, would not result in any new significant impacts to riparian or other sensitive habitats. The creeks and seasonal wetlands identified in the 2004 FEIR are located to the South of West Leland Road and would not therefore be affected by the 2018 proposed project. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 EIR did not expressly analyze wildlife movement on the site. However, a less than significant impact would have been anticipated due to proximity to surrounding urban development and lack of high quality habitat on-site. The 2004 FEIR at page 11-10 states that due to the limited amount of tree and shrub cover. . . the creeks and drainages do not allow for concealed wildlife movement.

**Proposed Project Analysis and Conclusion**

Given the project site's already-graded status, its proximity to surrounding urban development, and the lack of high-quality habitat on-site, there are no significant wildlife movement corridors that would be significantly impacted by the proposed project. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR analyzed application of local policies or ordinances protecting biological resources, and identified impacts related to natural drainage courses as potentially significant based on potential conflicts with the proposal to construct the Vista Del Mar development.

However, the 2004 FEIR concluded that implementation of 2004 FEIR Mitigation Measures 11-1, which required consistency with local biological resources protection, including the actions required by the other 2004 FEIR biological mitigation measures (i.e., species surveys, protections where warranted, reseeding of cut and fill slopes, setbacks from natural drainage courses, etc.), would reduce this impact to less than significant.

### Proposed Project Analysis and Conclusion

The proposed project, which involves the same types of uses within the same general footprint as previously evaluated, but at a lower overall density and intensity, would not result in any new significant impacts to natural drainage courses on the project site, or otherwise result in any conflicts with other applicable local policies or ordinance protecting biological resources. As noted in the biological resource memorandum, the 2018 project site does not contain sensitive species or habitats, and would not therefore introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### f) Summary of 2004 FEIR

The initial study prepared as part of the 2004 FEIR noted that the project site is not subject to any adopted Habitat Conservation Plan, and concluded that there would be no impact in this regard.

### Proposed Project Analysis and Conclusion

The proposed project, which involves the same types of uses within the same general footprint as previously evaluated, but at a lower overall density and intensity, would not result in any new significant impacts in this regard. Since the 2004 FEIR was certified, the City of Pittsburg has become a party to the East Contra Costa County Habitat Conservation Plan (ECCC HCP), which identifies the site as a combination of ruderal and grasslands. However, the City's ordinance implementing the ECCC HCP exempts projects with vested rights as established by California law including Government Code Sections 65864 through 65869 ("development agreements"). Accordingly, it has been determined that no additional impact would occur and therefore no additional mitigation measures are required. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

## Mitigation Measures

Biological resources mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 11-1**      The ultimate determination whether the proposed project, after implementation of the mitigations identified in this EIR, is or is not inconsistent with one or more General Plan goals or policies, would be the responsibility of City officials assigned

such authority. In particular, interpretation of project consistency with City of Pittsburg General Plan policy is the ultimate responsibility of the City of Pittsburg Planning Commission and City Council.

In order to comply with City of Pittsburg General Plan policies 9-P-1 and 9-P-8, the project shall incorporate the following changes and mitigations into the project:

- (1) Implement Mitigations 11-3 through 11-12 which are discussed on the following pages (see Policy 9-P-1); and
- (2) **Reseed cut and fill slopes or other graded/disturbed areas on the project site with a native herbaceous seed mix. No nonnative or invasive species shall be included in the mix (see Policy 9-P-8).**
- (3) The current preliminary version of the applicant's Mitigation and Monitoring Plan formulated for review by the resources agencies proposes preservation of approximately 3,300 linear feet of onsite drainages and onsite enhancement of approximately 1,000 linear feet of drainages.

The City of Pittsburg shall make the above items conditions of project approval and shall not approve grading plans until the above mitigations have been incorporated into the project to City satisfaction. During the local development review process, the City shall determine whether the applicant-proposed onsite drainage preservation program achieves project consistency with General Plan goals and policies related to creeks, or whether additional design measures are warranted.

**MM 11-3      The City of Pittsburg shall not issue a grading permit for the project until adequate demonstration to the City that California red-legged frog issues have been resolved to the satisfaction of the USFWS. To satisfy the USFWS, the applicant will need to: (1) instruct the U.S. Army Corps of Engineers (Corps) to initiate formal consultation, pursuant to section 7 of the Federal Endangered Species Act, with the USFWS regarding the California red-legged frog; and (2) implement mitigation as necessary (see details below). A copy of a "non-jeopardy" Biological Opinion issued by the USFWS shall be submitted to the City prior to issuance of a grading permit.**

**MM 11-4      The City of Pittsburg shall not issue a grading permit for the project until adequate demonstration to the City that mitigation for impacts to California tiger salamander habitat will be implemented to the satisfaction of the CDFG (and the USFWS since the species has recently been federally listed). To satisfy the CDFG and USFWS, the applicant will need to: (1) consult with the CDFG and the USFWS; and (2) redesign the project as much as possible to avoid aestivation and potential breeding habitat; or (3) where avoidance is not feasible, replace affected habitat in accordance with CDFG and USFWS requirements, and in accordance with specifications discussed in Mitigation 11 1; and (4) salvage adults and/or larvae.**

- MM 11-6**      The applicant shall coordinate with the USFWS regarding any additional review of potential San Joaquin kit fox impacts resulting from the proposed project. Additionally, within 30 days prior to any earth-moving disturbance, a qualified kit fox biologist(s) [i.e., the biologist(s) must meet the qualifications stated in USFWS' survey protocol (USFWS 1997b)] shall conduct preconstruction den surveys on the project site. These surveys shall follow the methodology outlined in Appendix 1, Section 2, of USFWS' 1997 survey protocol. Any potential dens identified during the preconstruction surveys shall be monitored with cameras for a minimum of three nights in accordance with the survey protocol. If kit fox or kit fox sign is identified at any time during these surveys, all work shall cease and USFWS and CDFG personnel shall be contacted immediately. Implementation of this mitigation would reduce any project impacts on San Joaquin kit fox to a less-than-significant level.
- MM 11-7**      Completion of the CDFG-protocol surveys for burrowing owl shall be a condition of project approval. The applicant shall retain a qualified biologist to conduct CDFG-protocol surveys for burrowing owl the year grading is proposed. If burrowing owls are found on the project site, the applicant shall be required to prepare a Habitat Mitigation Plan and a Mitigation Agreement for any burrowing owls identified. The City shall receive copies of the approved Mitigation Plan and Mitigation Agreement between the applicant and the CDFG prior to issuing a grading permit for the proposed project. All surveys and mitigation shall be coordinate by the applicant with CDFG. If such surveys demonstrate that burrowing owls do not occur on the project site, no further requirement for burrowing owls shall be required by the City. Implementation of these measures would reduce this potential impact to a less-than-significant level.
- MM 11-8**      Completion of nesting surveys for these raptors and establishment of CDFG-approved mitigation for any survey-identified active nests shall be a condition of project approval. The applicant shall retain a qualified raptor biologist to conduct spring nesting surveys the year grading is proposed. If nest(s) are found, the CDFG can be expected to require the following or similar protection measures:
- (1) Establishment of a fenced buffer of 1,000 feet around any survey-identified active raptor nest, or as otherwise determined by a qualified, CDFG-approved raptor biologist (see text below).
  - (2) Having a biological monitor present during all grading activity near the buffer zone; and
  - (3) Avoiding grading within the buffer zone until the raptor biologist states that the young have fledged and are flying well enough to avoid being impacted by project construction.
- If such surveys demonstrate that raptor nests do not occur on the project site, no further requirements for these raptors shall be required by the City.

Implementation of this measures would reduce this potential impact to a less-than-significant level.

**MM 11-9** Completion of loggerhead shrike nesting surveys and establishment of CDFG-approved mitigation for any survey-identified active nests shall be a condition of project approval. The applicant shall retain a qualified biologist to conduct spring nesting surveys for loggerhead shrike, coordinated with the CDFG, the year grading is proposed. If nest(s) are found, the applicant shall complete the following measures:

- (1) Establish a 250-foot fenced buffer zone around each active nest location; and
- (2) Have a biological monitor present during all grading activity near the buffer zone.

If appropriately timed nesting surveys demonstrate that loggerhead shrikes do not nest on the project site, no further requirements for the bird shall be required by the City. Implementation of this mitigation would reduce this potential impact to a less-than-significant level.

**MM 11-10** Completion of California horned lark nesting surveys and establishment of CDFG-approved mitigation for any identified active nests shall be a condition of project approval. The applicant shall retain a qualified biologist to conduct spring nesting surveys for California horned lark, coordinated with the CDFG, the year grading is proposed. If nest(s) are found, the CDFG can be expected to require the applicant to complete the following or similar measures:

- (1) Establish a 250-foot-wide fenced buffer zone around each survey-identified active nest location; and
- (2) Have a biological monitor present during all grading activity near the buffer zone.

If such surveys demonstrate that California horned larks do not nest on the project site, no further requirements for this bird shall be required by the City. Implementation of this mitigation would reduce this potential impact to a less-than-significant level.

## Conclusion

The biological resources conclusions in the 2004 EIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 12-1                          |
| c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?              | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 12-1                          |
| d) Disturb any human remains, including those interred outside of formal cemeteries?                                 | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 12-1                          |

## Discussion

Cultural resource impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified two potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 12-1 and 12-2 and related cultural resources impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The California Historic Resource Information System (CHRIS) records search did not identify historic resources on or within 0.5 miles of the Vista Del Mar development area. The 2004 FEIR found that several on-site structures associated with previous ranch activity (located south of West Leland Road) are more than 45 years old and could qualify as historic structures. As a result, potentially significant impacts could occur. However, the 2004 EIR required

implementation of 2004 FEIR Mitigation Measure 12-2, which would ensure a historical resources survey would be conducted for all on-site structures meeting the requirements of section 5024.1(g) of the State Public Resources Code and, to the extent any historic resources are on-site, the survey would identify appropriate measures to mitigate any significant impacts. The City concluded that impacts would be reduced to less than significant with incorporation of mitigation.

### **Proposed Project Analysis and Conclusion**

The project site was graded as part of the Vista Del Mar development. An updated CHRIS records search was conducted on June 25, 2018 and found that no additional historic resources have been recorded at the project site since 2004. A pedestrian survey of the site conducted on June 25, 2018, confirmed that no structures remain at the site (see Appendix B). The proposed project does not anticipate any significant changes to historic resources beyond those analyzed in the 2004 FEIR.

Nevertheless, similar to the findings in the 2004 FEIR, impacts would be potentially significant with regard to unknown historic resources that could potentially be exposed as a result of construction. Implementation of 2004 FEIR Mitigation Measure 12-2 would reduce impacts to less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

### **b) Summary of 2004 FEIR**

The 2004 FEIR noted that excavation and construction on the Vista Del Mar development area (which included the Alves Ranch project site) could uncover previously unknown prehistoric and archeological resources. As explained further in the 2004 FEIR, the CHRIS Northwest Information Center was contacted and it was determined that the Vista Del Mar development area was in an area with a moderate potential for undiscovered Native American sites. Therefore, the 2004 FEIR concluded that project-related grading and construction activities could uncover previously undiscovered prehistoric and archeological resources resulting in potentially significant impacts. However, the 2004 FEIR also concluded that with implementation of 2004 FEIR Mitigation Measure 12-1, this would reduce these impacts to a less than significant level.

### **Proposed Project Analysis and Conclusion**

The proposed project involves development within the same general footprint that was analyzed in the 2004 FEIR. However, the project site was previously graded as part of the Vista Del Mar development. An updated CHRIS records search was conducted on June 25, 2018, and found that no additional archeological resources have been recorded at the site since 2004. In addition, the Native American Heritage Commission (NAHC) was asked to perform a search of its Sacred Lands File (SLF), which returned negative results for recorded Tribal Cultural Resources at the site.

FirstCarbon Solutions (FCS) sent letters to the six tribal representatives identified by the NAHC on June 29, 2018 to further determine the potential for Native American sites on the project site, and no replies have been received to date.

An updated pedestrian survey conducted at the site on June 25, 2018, failed to identify any unrecorded archaeological resources within the project boundaries; however, visibility was poor due to grasses and ground cover that obscured the majority of the site (Appendix B). The proposed project does not anticipate any significant cultural resources changes beyond those analyzed in the 2004 FEIR. Furthermore, the proposed project would be required to implement 2004 FEIR Mitigation Measure 12-1, which would ensure that if any significant finds are uncovered, appropriate measures would be implemented to ensure that impacts are mitigated to a less than significant level, similar to the conclusions set forth in the 2004 FEIR. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 EIR considered whether construction in the Vista Del Mar development area could potentially impact previously unknown paleontological resources. According to the 2001 General Plan EIR, potential paleontological resources could be unearthed during excavation and construction activities on the Vista Del Mar development area (including the Alves Ranch project site). However, the 2004 EIR concluded that with implementation of 2004 EIR Mitigation Measure 12-1, this would reduce potentially significant impacts to a less than significant level.

**Proposed Project Analysis and Conclusion**

The proposed project would be developed in the same general footprint as previously evaluated in the 2004 FEIR, and thus there is the possibility of uncovering previously unknown paleontological resources. Therefore, on June 11, 2018 a Paleontological Records Search was conducted by Dr. Ken Finger for FCS (see Appendix B) to determine the potential for paleontological resources to occur on the project site. No known paleontological resources are located within a half-mile radius of the project site based on the University of California Museum of Paleontology (UCMP) database. However, the project site is located on Pliocene nonmarine deposits and these soils have the potential to yield paleontological resources during construction and grading activities. Any activity that destroys paleontological resources would result in significant impacts. However, similar to the conclusions set forth in the 2004 FEIR, the proposed project would be required to implement 2004 FEIR Mitigation Measure 12-1, which would reduce impacts to less than significant. Therefore, the proposed project would not create or result in cultural resources impacts greater than evaluated in the 2004 FEIR. No further analysis is required.

**d) Summary of the 2004 FEIR**

The 2004 FEIR determined that construction in the Vista Del Mar development area could potentially disturb human remains, including remains interred outside of formal cemeteries. For these reasons, the 2004 FEIR determined that if inadvertent discovery of human remains occurred during construction activities, this would be a significant impact. Therefore, the 2004 EIR identified Mitigation Measure 12-1 as necessary to be imposed on the Vista Del Mar development to ensure impacts would be reduced to a less than significant level.

**Proposed Project Analysis and Conclusion**

Mass grading has previously occurred on the project site as part of the Vista Del Mar development and as part of this grading, 2004 FEIR Mitigation Measure 12-1 was implemented to ensure that impacts remained less than significant. However, because the proposed project would be located within the same general footprint as the development analyzed in the 2004 EIR, construction of the proposed project could uncover human remains during excavation, which would result in potentially significant impacts. Therefore, consistent with the conclusions in the 2004 FEIR, the proposed project would be required to implement 2004 FEIR Mitigation Measure 12-1, which would reduce impacts to less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**Mitigation Measures**

Cultural resources mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 12-1      Require that a qualified archaeologist be retained at applicant expense to monitor project-related on-site excavation. In the event that subsurface cultural resources are uncovered during approved ground-disturbing activities, work in the immediate vicinity shall be halted immediately and the retained archaeologist shall evaluate the finds and make a determination in regard to the cultural value of the discovery and warranted mitigation measures. Such preliminary field inspection may demonstrate the need for some form of additional subsurface testing; e.g. excavation by auger shovel or backhoe unit. The discovery or disturbance of any significant cultural resources should be reported to the California Historical Resources Information System (CHRIS). The discovery of any Native American cultural resources shall also be reported to the Native American Heritage Commission. If a significant archaeological resource is identified through this field inspection process the City and project proponent shall seek to avoid damaging effects to the resource. Preservation is the preferred manner of mitigating impacts to an archaeological site. When in-place mitigation is determined by the City to be infeasible, a mitigation program, including measures**

set forth in sections 15064.4 and 15126.4 of the CEQA Guidelines shall be implemented. Specifically a data recovery plan which makes provisions for adequate recovery of the scientifically consequential information about the site shall be prepared prior to any additional excavation being undertaken. The plan shall be submitted to the California Historical Resources Regional Information Center (i.e. the NWIC at Sonoma State University). If Native American artifacts are indicated the plan shall also be submitted to the Native American Heritage Commission (NAHC). Identified cultural resources should be recorded on State Department of Parks and Recreation form DPR 422 archaeological sites. The data recovery plan should be finalized as necessary to incorporate any mitigation additions or revisions recommended by these two groups and or required by the City. If human remains are found special rules set forth in State Health and Safety Code section 70505 and CEQA Guidelines section 15126.4(b) shall apply. The identified mitigations shall be undertaken to City satisfaction if necessary prior to resumption of grading activities. A data recovery plan and data recovery shall not be required if the City determines that testing or studies already completed have adequately recovered the necessary data provided that the data are available for review at the California Historical Resource Regional Information Center CEQA Guidelines section 15126.4(b) Implementation of these measures will reduce this potential impact to a less-than-significant level.

**MM 12-2**

The Applicant shall hire a qualified archaeologist or architectural historian to conduct a historical resources survey HRS for all on site ranch structures which appear to be over 45 years old, meeting the requirements of section 50241(g) of the State Public Resources Code. Further mitigation shall not be required if the City accepts an HRS finding that none of the existing on-site ranch structures is a significant historic resource as defined in CEQA Guidelines section 15064.5(a). For any project action that may cause a substantial adverse change in one or more HRS-identified potentially significant historic resources the applicant shall incorporate measures that would seek to improve the affected historic resource in accordance with either of the following publications:

- Secretary of Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving Rehabilitating Restoring and Reconstructing Historic Buildings, or
- Secretary of Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings.

## Conclusion

The cultural resources conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                               | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures           |

| <b>VI. Geology and Soils</b>                                                                                                                                                                                                                                                           |                                       |                                                                         |                                                                     |                                                         |                                         |
| <i>Would the project:</i>                                                                                                                                                                                                                                                              |                                       |                                                                         |                                                                     |                                                         |                                         |
| a) Expose people or structures to potential substantial adverse effects, including risk of loss, injury, or death involving:                                                                                                                                                           |                                       |                                                                         |                                                                     |                                                         |                                         |
| i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | No impact                             | No                                                                      | No                                                                  | No                                                      | None.                                   |
| ii) Strong seismic ground shaking?                                                                                                                                                                                                                                                     | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 10-1                                    |
| iii) Seismic-related ground failure, including liquefaction?                                                                                                                                                                                                                           | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 10-1                                    |
| iv) Landslides?                                                                                                                                                                                                                                                                        | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 10-1 and 10-2                           |
| b) Result in substantial soil erosion or the loss of topsoil?                                                                                                                                                                                                                          | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 10-9                                    |
| c) Be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral                                                                                                       | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 10-3, 10-4, 10-5, 10-6, 10-8, and 10-12 |

| Environmental Issue Area                                                                                                                                                             | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|-------------------------------------------------------------------------|---------------------------------------------------------------------|---------------------------------------------------------|-------------------------------|
| spreading, subsidence, liquefaction or collapse?                                                                                                                                     |                                       |                                                                         |                                                                     |                                                         |                               |
| d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?                                     | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 10-7                          |
| e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water. | No impact                             | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Geology and soils impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified 12 potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 10-1 through 10-12 and related geology and soils impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR (Surface Rupture, Seismic Shaking, and ground failure, including liquefaction)

**Surface rupture:** The 2004 FEIR determined that there are no active or potentially active faults or traces on the project site. Accordingly, there would be no impact related to surface rupture.

**Groundshaking:** The project site is located in the San Francisco Bay Area and thus at risk of moderate to high ground shaking. The 2004 FEIR determined that adherence to California Building Code requirements would ensure that potential impacts related to seismic groundshaking would be reduced to a less than significant level

**Ground failure due to liquefaction and/or landslides:** The 2004 FEIR determined that although a geotechnical study had been prepared by Berlogar Geotechnical Consultants (BGC), there was no assurance that the recommendations and construction guidelines would be implemented into the Vista Del Mar development. In addition, the BGC study identified areas susceptible to landslides, which could destroy impoundment ponds and significant impacts could potentially occur. Further, the BGC study did not fully describe remediation required to prevent landslides from occurring, which could result in potentially significant impacts. As a result, 2004 FEIR Mitigation Measures 10-1, 10-2, and 10-11 were proposed to ensure that a geotechnical study would evaluate future project impacts and identify specific measures that would be incorporated into project grading and site preparation plans to reduce these significant impacts to a less than significant level. Implementation of these measures was determined by the City to reduce impacts to less than significant.

### **Proposed Project Analysis and Conclusion**

The proposed project involves the same types of uses, to be developed in the same general footprint as was previously evaluated; however, there will be fewer residential units and less commercial square footage as compared to the development evaluated in the 2004 FEIR. Therefore, fewer people and structures overall would be exposed to the geological risks previously identified.

Furthermore, as required by the applicable mitigation measures, Stevens, Ferrone & Bailey Engineering Company, Inc. (SFB) prepared a Geotechnical Memo (Appendix C) for the proposed project on June 1, 2018. As already noted in the 2004 FEIR, the proposed project is not located in an Alquist-Priolo Fault Zone as designated by the State of California.

Although the project site is located in the San Francisco Bay Area and thus at risk of moderate to high ground shaking, similar to other developments in the vicinity, this finding is consistent with the analysis in the previous 2004 FEIR, which determined that 2004 FEIR Mitigation Measure 10-1 would reduce these potentially significant impacts to a less than significant level.

Furthermore, according to the SFB report, the project site's susceptibility to liquefaction is low, and thus, there would be less than significant impacts in this regard. In addition, previous mass grading and removal of weak soils have since created a relatively level site that has a low potential for landslides. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

### **b) Summary of 2004 FEIR (soil erosion/loss of topsoil)**

The 2004 FEIR determined that construction of the Vista Del Mar development would leave on-site soils exposed to wind and water erosion. The resulting erosion could cause sediment to block culverts and stormwater channels and result in increased flooding in the development's vicinity. In addition, soil erosion would ultimately degrade water quality in Suisun Bay. These soil erosion impacts could be potentially significant. Therefore, to reduce these impacts to a

less than significant level, the 2004 FEIR identified Mitigation Measure 10-9, which required the preparation and implementation of an erosion control plan subject to City approval. Therefore, with implementation of this mitigation measure, the City concluded that impacts were less than significant.

### **Proposed Project Analysis and Conclusion**

Similar to the Vista Del Mar development evaluated in the 2004 FEIR, construction of the proposed project would reduce the project site's vegetation cover and increase the potential for significant soil erosion impacts. Implementation of 2004 FEIR Mitigation Measure 10-9 would reduce these potentially significant impacts to less than significant levels through preparation and implementation of an erosion control plan subject to approval by the City. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **c) Summary of 2004 FEIR (geologic instability)**

The 2004 FEIR determined that existing slopes on the Vista Del Mar development area greater than 30 percent could be subject to soil creep, and slopes greater than 20 percent could be susceptible to liquefaction and landslides during heavy rains. In addition, slopes that were proposed to be cut and filled could be subject to slope failure due to the steep gradients proposed. As a result, the development's grading proposals would be inconsistent with General Plan policy 10-P-3. Furthermore, the 2004 FEIR determined the BGC study did not identify mitigation for the adverse effects of long-term settlement, and therefore the development could result in potentially significant impacts. Additionally, soils on the Vista Del Mar development area were identified as moderately to highly corrosive to unprotected steel, resulting in potentially significant impacts to underground utility systems or building foundations. The 2004 FEIR also determined that future project site slope failure on the development area could damage on-site subsurface drainage systems without proper maintenance, resulting in potentially significant impacts. However, the City concluded that implementation of 2004 FEIR Mitigation Measures 10-3, 10-4, 10-5, 10-6, 10-8, and 10-12 would reduce the foregoing potentially significant impacts to less than significant levels.

### **Project Analysis and Conclusion**

According to the recent SFB Geotechnical Memo (Appendix C), the project site was previously graded under the guidance of BGC including the removal of all expansive soils and slopes. As a result, all significant impacts related to slope failure, liquefaction, debris flows, and landslides that were previously identified in the 2004 EIR would be less than significant with respect to the proposed project because the site no longer contains slopes susceptible to these risks. Similar to the 2004 EIR, the proposed project could still result in potentially significant impacts from long-term differential settlement, corrosive soils, and geotechnical maintenance. However, the proposed project would be required to implement 2004 EIR Mitigation Measures 10-6, 10-8, and 10-12, which would reduce these impacts to less than significant. Therefore,

the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 EIR determined that the Vista Del Mar development area contained expansive soils and any development, such as utility lines, roads, or building foundations, could result in long-term damage to these structures and therefore the 2004 EIR characterized these impacts as potentially significant. However, the 2004 EIR determined that implementation of Mitigation Measure 10-7 would require that expansive soils be removed or amended in accordance with applicable City standards. Therefore, the City concluded that impacts would be reduced to less than significant with incorporation of this mitigation.

**Proposed Project Analysis and Conclusion**

The project site is located within the same general footprint evaluated in the 2004 FEIR and contains the same expansive soils. According to the recent SFB Geotechnical Memo (Appendix C), the site was previously mass graded as a part of the larger Vista Del Mar residential development to the south under the guidance of Berlogar Geotechnical Consultants (BGC). In addition, the 2008 BGC report describes that all expansive soils on the project site were removed as part of previous mass grading and replaced with engineered fill. As a result, the proposed project is no longer at significant risk to expansive soils, and impacts would be less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR determined that the Vista Del Mar development area did not contain septic tanks or alternative wastewater systems. In addition, the Vista Del Mar development would connect to the City of Pittsburg sewer system and would not involve the installation of septic tanks or alternative wastewater systems. As a result, the 2004 FEIR determined that no impacts would occur.

**Proposed Project Analysis and Conclusion**

The proposed project would be located within the same general footprint evaluated in the 2004 FEIR, and would connect to the existing City sewer system. Similar to the Vista Del Mar development evaluated in the 2004 FEIR, the proposed project does not propose the use of septic tanks or alternative wastewater systems and no impacts would occur. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Geology and soils mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 10-1**      The project geotechnical engineer shall prepare a final design-level project geotechnical study subject to review and approval by an independent engineering geologist retained by the City at applicant expense. The review shall evaluate if the study and all of its conclusions are consistent with generally accepted geotechnical engineering practice and in agreement with the approved site development plan. Relevant provisions of the geotechnical study shall be incorporated into project grading and site preparation plans. All earthwork and site preparation shall be performed under the direct supervision of a State-certified geotechnical engineer or these measures to the satisfaction of the independent engineering geologist and the City Engineer would reduce this potential impact to a less-than-significant level.
- MM 10-4**      The City and its independent engineering geologist shall closely evaluate all project proposals for the construction of slopes in particular cut slopes steeper than three-to-one, to prevent future slope failures that could damage existing homes/project improvements or require slope repairs at the expense of the West Pittsburgh GHAD. If the stability of these proposed slopes can be independently confirmed, implement the construction measures recommended in the project geotechnical study. If the slopes stability cannot be confirmed redesign the slopes to achieve a flatter more sustainable gradient. Implementation of this measure to the satisfaction of the City-retained independent engineering geologist and City Engineer would reduce this potential impact to a less-than-significant level.
- MM 10-6**      Specification for site development shall include mandatory phasing for construction of site improvements as recommended by the project geotechnical engineer if settlement monitoring indicates that long-term settlement within individual fill areas could eventually exceed allowable amounts and damage or otherwise limit the usefulness of buildings or other improvements. Implementation of this measure to the satisfaction of the City retained engineering geologist and City Engineer would reduce this potential impacts to a less than significant level.
- MM 10-7**      In addition to the observation of all cut and fill slope construction the project geotechnical engineer shall inspect and certify that any expansive soils underlying individual building pads and all roadway subgrades have been either removed or amended in accordance with City-approved construction specifications. If expansive soils are not fully remediated on each lot and in the area of all public and private improvements at the time of site development the project geotechnical engineer shall make site-specific recommendations for grading,

drainage, installation of foundation design, the addition of soil amendments and or the use of imported non-expansive fill materials as may be required to fully mitigate the effects of weak or expansive soils and prevent future damage to project improvements. Following review and approval by the City-retained independent engineering geologist and City Engineer (see Mitigation 10-1) these recommendations shall be incorporated into a report to be included with each building permit application and with the plans for all public and common-area improvements.

- MM 10-8** Specification for site development shall include a protocol for verifying that adequate protection has been provided for all foundations and underground utilities that could be damaged by corrosive soils. The project civil engineer shall be responsible for implementation of this protocol with final approval by the City Engineer. Implementation of this measure would reduce this potential impact to a less-than-significant level
- MM 10-9** Prepare an erosion control plan subject to City approval and implement the plan during construction. The plan shall provide for long-term stabilization of all exposed soils upon the completion of project development. Implementation of this measure would reduce this potential impact to a less than significant level.
- MM 10-10** Educational materials that discourage overwatering in landscaped areas shall be furnished to all future lot owners and commercial/multi-family property managers at the time of purchase and periodically thereafter (perhaps by inclusion with water or tax bills), as part of an effort to control groundwater seepage. Area 1 property managers shall also be required to regularly maintain onsite drainage systems to ensure that storm water runoff is directed away from all slope areas.
- MM 10-12** Require project annexation to the West Pittsburgh Geologic Hazard Abatement District (GHAD) in order to adequately address the special circumstances and long-term geotechnical maintenance needs associated with development in areas of potential geologic instability. Establish a long-term funding mechanism for the maintenance of slopes and all other on-site conditions that could affect slope stability. The existence of and the responsibilities attached to project inclusion in the GHAD shall be clearly disclosed to all purchasers of property within the project site. In addition, all risks and liabilities associated with the ownership of project land in the vicinity of potentially unstable slopes shall be fully explained to potential buyers at the time of purchase. Implementation of these measures to the satisfaction of the City-retained engineering geologist and City Engineer would this potential impact to a less than significant level.

## Conclusion

The geology and soils conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                       | Conclusion in 2004 FEIR | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area? | N/A                     | No                                                                      | No                                                                  | No                                                      | N/A                           |
| f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?                                                                                                      | N/A                     | No                                                                      | No                                                                  | No                                                      | N/A                           |
| g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?                                                                                                                                        | N/A                     | No                                                                      | No                                                                  | No                                                      | N/A                           |
| h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?                                             | N/A                     | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Hazards and hazardous materials impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potentially significant

impacts utilizing the above environmental issue areas from Appendix G of the 2004 State CEQA Guidelines as thresholds of significance. 2004 FEIR hazards and hazardous materials impact discussions collectively address the above environmental issue areas as described below.

**a) Summary of 2004 FEIR**

The development analyzed in the 2004 FEIR was consistent with the General Plan land use designations for the site. In addition, since the General Plan did not identify significant hazardous materials use or disposal impacts with buildout of the Vista Del Mar development because land uses would be residential and commercial. These land uses are not associated with significant routine transport, use, or disposal of hazardous materials. Although hazardous materials could be stored, generated, and/or used on the project site, all hazardous materials would be required to be stored and handled in compliance with applicable local, State, and federal laws and regulations. Therefore, the City concluded that impacts were less than significant.

**Proposed Project Analysis and Conclusion**

Similar to the development analyzed in the 2004 FEIR, the proposed project would develop residential and commercial land uses. Project development would result in some hazardous materials storage and use typically associated with commercial and residential development; however, the proposed project does not propose industrial uses that would involve the routine transport, use, and disposal of significant hazardous materials. In addition, all hazardous materials used and stored on-site would be required to comply with applicable local, State, and federal laws and regulations. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR evaluated whether the Vista Del Mar development could potentially create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials. Though the EIR did not include further detailed analysis, the Vista Del Mar development, with its typical residential and commercial uses, was determined to have less than significant impact.

**Proposed Project Analysis and Conclusion**

Similar to the 2004 FEIR, the proposed project would not develop industrial land uses that involve significant uses of hazardous materials. In addition, the proposed project consists of fewer residential units and commercial space and as a result would result in less hazardous materials associated with these land uses. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 miles of an existing school. The City concluded that there would be a less than significant impact.

**Proposed Project Analysis and Conclusion**

Similar to the 2004 FEIR, the proposed project would develop residential units and commercial space generally consistent with the current General Plan land use designations. In addition, the proposed project would not emit hazardous emissions or handle hazardous materials, substances, or waste, because the proposed land uses do not involve these types of hazardous wastes. Similar to the 2004 FEIR, the proposed project would result in less than significant impacts. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 FEIR did not identify significant soil or groundwater contamination on the project site. Past underground storage tanks (USTs) were found to have released gasoline and impacted soils. However, previous laboratory analysis determined contaminated soil did not impact groundwater and would be excavated according to all applicable state and county laws, regulations and policies. The City determined that compliance with these requirements would reduce impacts to a less than significant level. Note that the 2004 FEIR does not discuss any findings of hazardous materials database sites, such as Envirostore or GeoTracker.

**Proposed Project Analysis and Conclusion**

According to the 2018 ENGEO Phase I ESA (Appendix D), there is no evidence of soil or groundwater impairments on the project site. In addition, ENGEO conducted an environmental records search of the project site and found no database sites on the property or in the vicinity that pose a significant risk. Similar to the 2004 FEIR, the proposed project would result in less than significant impacts. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would be located within an airport land use plan and would if so, would the development result in a safety hazard for people residing or working in the project area. Although the 2004 FEIR did not include further detailed analysis, the City determined that there would be no impact in this regard.

### **Proposed Project Analysis and Conclusion**

The closest public or private airport or airstrip is the Buchanan Field Airport, located approximately 5.83 miles to the southwest. The project site is located well outside the boundaries of the Airport Land Use Plan and no impacts would occur. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **f) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would be located in proximity to a public airport or private airstrip or otherwise would be located within the boundaries of an airport land use plan and thus result in a significant safety hazard for people residing or working in the project area. Although the 2004 FEIR did not include further detailed analysis, it was determined that there would be no impact in this regard.

### **Proposed Project Analysis and Conclusion**

Similar to the conclusions set forth in the 2004 FEIR, the proposed project would not include development in the vicinity of a private airstrip or public airport or otherwise fall within the boundaries of an airport land use plan. No impacts would occur. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **g) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would result in significant impacts by impairing implementation of an emergency plan or evacuation plan. Although the 2004 FEIR did not include further detailed analysis, it was determined that there would be no impact in this regard.

### **Proposed Project Analysis and Conclusion**

Similar to the development analyzed in the 2004 FEIR, the proposed project would be located in an otherwise fully developed area along West Leland Road, and SR 4 and would be accessible to all emergency services and evacuation routes; therefore, no substantial impairment to an emergency plan or evacuation route would occur. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**h) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would be result in significant risks associated with wildland fires. Although the 2004 FEIR did not include further detailed analysis, it was determined that there would be no impact in this regard.

**Proposed Project Analysis and Conclusion**

Similar to the development analyzed in the 2004 FEIR, the proposed project would be located in a highly urbanized area and not in an area susceptible to wildland fires and thus no impacts would occur. The project includes secondary access in compliance with fire district requirements, and also includes street widths and turnarounds in compliance with current fire code standards to ensure appropriate emergency access, circulation, and ingress/egress. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**Mitigation Measures**

No mitigation is required.

**Conclusion**

The hazards and hazardous materials conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                                                                                                                      | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| <b>VIII. Hydrology and Water Quality</b>                                                                                                                                                                                                                                                                                                                                                      |                                       |                                                                         |                                                                     |                                                         |                               |
| <i>Would the project:</i>                                                                                                                                                                                                                                                                                                                                                                     |                                       |                                                                         |                                                                     |                                                         |                               |
| a) Violate any water quality standards or waste discharge requirements?                                                                                                                                                                                                                                                                                                                       | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 9-4                           |
| b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? | Less than significant                 | No                                                                      | No                                                                  | No                                                      | N/A                           |
| c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?                                                                                                                                                            | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 9-3                           |

| Environmental Issue Area                                                                                                                                                                                                                                                  | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site? | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 9-1                           |
| e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?                                                                                     | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 9-1 and 9-2                   |
| f) Otherwise substantially degrade water quality?                                                                                                                                                                                                                         | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 9-3 and 9-4                   |
| g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?                                                                                                      | No impact                             | No                                                                      | No                                                                  | No                                                      | N/A                           |
| h) Place within a 100-year flood hazard structures which would impede or redirect flood flows?                                                                                                                                                                            | No impact                             | No                                                                      | No                                                                  | No                                                      | N/A                           |

| Environmental Issue Area                                                                                                                                         | Conclusion in 2004 FEIR | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|-------------------------------------------------------------------------|---------------------------------------------------------------------|---------------------------------------------------------|-------------------------------|
| i) Expose people or structures to significant risk or loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? | No impact               | No                                                                      | No                                                                  | No                                                      | N/A                           |
| j) Inundation of by seiche, tsunami, or mudflow?                                                                                                                 | No impact               | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Hydrology and water quality impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified four potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 9-1 through 9-4 and related hydrology and water quality impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR found that stormwater runoff from the Vista Del Mar development area would degrade water quality downstream due to non-point source pollutants. This would result in potentially significant impacts to water quality standards. The 2004 FEIR determined implementation of 2004 FEIR Mitigation Measure 9-4 and incorporation of a Storm Water Pollution Prevention Plan (SWPPP) as described in 2004 FEIR Mitigation Measure 9-3 would reduce long-term non-point source pollutants. Therefore, the City concluded that impacts would be reduced to a less than significant level with incorporation of mitigation.

### Proposed Project Analysis and Conclusion

The proposed project involves development of the same uses within the same general footprint evaluated in the 2004 FEIR; however, the overall number of residential units and commercial square footage would be reduced. Similar to the Vista Del Mar development evaluated in the 2004 FEIR, development of the proposed project could potentially degrade water quality due to non-point source urban pollutants, resulting in potentially significant impacts.

Similar to the 2004 FEIR, implementation of 2004 FEIR Mitigation Measure 9-4 and incorporation of a SWPPP would reduce proposed project impacts to a less than significant level. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR considered the potential for a new development to substantially deplete groundwater supplies or interfere with groundwater. The 2004 FEIR found that groundwater quality in the Pittsburg Plain basin was poor, and there was no significant use of groundwater in the City; rather, it primarily obtains drinking water from surface supplies available through the Contra Costa Water District (CCWD). In addition, soils in the project vicinity were determined to have low permeability so it was unlikely significant groundwater recharge occurs on the project site. The City concluded that impacts were less than significant.

**Proposed Project Analysis and Conclusion**

Consistent with the Vista Del Mar development that was studied in the 2004 EIR, the City would continue to obtain water from CCWD and would provide potable water through available surface water supplies to the project site, as well as a small amount of well water (approximately 12 percent) to supplement the water purchased from CCWD. As a result, the proposed project would not substantially and adversely affect local aquifers by depleting groundwater supplies or interfering with groundwater recharge since CCWD relies primarily on surface water supplies, and therefore impacts would be less than significant in this regard.

The proposed project involves development of the same uses within the same general footprint evaluated in the 2004 FEIR; however, the overall number of residential units and commercial square footage would be reduced, with concurrent reduction in water demand. As a result, impacts would be similar to or less than what was evaluated in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 EIR found that grading and construction activity associated with the Del Mar Vista development would increase soil erosion and lead to increased sedimentation of downstream drainage facilities. This increase in sedimentation could cause localized flooding and increase turbidity in Suisun Bay resulting in potentially significant impacts. However, the 2004 EIR concluded that with the implementation of 2004 FEIR Mitigation Measure 9-3, which would require the incorporation of a SWPPP consistent with applicable State, RWQCB and local standards, impacts would be reduced to a less than significant level. Therefore, the City concluded that impacts would be less than significant with mitigation incorporated.

### **Proposed Project Analysis and Conclusion**

The project site has already been mass graded in connection with the adjacent Vista Del Mar development, and as part of this mass grading, applicable mitigation measures were implemented (including the incorporation of a SWPPP).

Similar to the development analyzed in the 2004 FEIR, the proposed project would require grading and construction activity that could lead to increased sedimentation in downstream drainage facilities; however, significant grading of the project site has already occurred as part of the broader Vista Del Mar development, as noted above. However, the proposed project would be required to implement 2004 FEIR Mitigation Measure 9-3, which would ensure that a SWPPP is incorporated into the proposed project's design. Implementation of this mitigation measure would reduce impacts to a less than significant level, consistent with the conclusions set forth in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **d) Summary of 2004 FEIR**

The 2004 FEIR found that construction of the Vista Del Mar development would create new impervious surfaces and increase the rate of stormwater runoff. This would be a potentially significant impact, because peak flow rates could exceed the existing planned capacity of downstream drainage systems. However, the 2004 EIR determined that implementation of 2004 FEIR Mitigation Measure 9-1 would ensure peak flows into the east highway culvert that would be located on-site as part of the stormwater detention facilities would be built to accommodate anticipated peak flows, and would be maintained according to adopted design criteria set by Caltrans, Contra Costa County Flood Control and Water Conservation District (CCCFCWCD), and the City. Therefore, the City concluded that the facility would be appropriately sized and would be operated and maintained to pursuant to performance standards to ensure that the planned capacity is not exceeded, and impacts would be less than significant.

### **Proposed Project Analysis and Conclusion**

A stormwater detention facility was built in the northern portion of the project site as part of the Vista Del Mar development. This detention facility was built in order to mitigate post development 10-year peak flows from the Vista Del Mar, San Marco, and Alves Ranch developments.

According to the 2018 Schaaf and Wheeler Detention Basin/Stormwater Memo (see Appendix E), the existing on-site stormwater detention facility would need to be increased to a total of 6.2 acre-feet as part of the proposed project design to be able to contain stormwater peak discharges. (While the project proposes a reduced unit count and commercial square footage, the remaining acreage could conservatively be covered in impervious surface leading to an overall increase in stormwater flow off-site.)

Similar to the analysis in the 2004 FEIR, the proposed project would be required to implement 2004 FEIR Mitigation Measure 9-1, which would require the mitigation of the project's post-development 10-year peak flows on-site through appropriate sizing of the detention facility. As noted in the project description, the increase in capacity would be accomplished by raising the elevation of the outfall structure. As a result, anticipated stormwater peak flows would continue to be adequately accommodated on-site in compliance Mitigation Measure 9-1. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR found that increased runoff caused by the Vista Del Mar development could worsen downstream flooding. In addition, CCCFCWCD determined the existing culvert and channel section were undersized and thus unable to fully accommodate the anticipated flows. These impacts could be potentially significant. However, the 2004 EIR concluded that with implementation of 2004 FEIR Mitigation Measure 9-2, which would require that proposed downstream improvements on Lines B and B-1 be completed, this would ensure that downstream culverts would provide sufficient capacity to accommodate post-development runoff in accordance with applicable standards and requirements. Therefore, the City concluded that impacts would be less than significant with the incorporation of mitigation.

**Proposed Project Analysis and Conclusion**

Similar to the 2004 Vista Del Mar development evaluated in the 2004 FEIR, the proposed project would also increase runoff volumes due to the creation of more impervious surfaces compared to existing conditions. However, the existing on-site stormwater detention facility would be increased to a total of 6.2 acre-feet as part of the proposed project design to be able to contain stormwater peak discharges. In addition, the proposed project would be required to implement 2004 FEIR Mitigation Measures 9-1 and 9-2, which would ensure that these impacts are reduced to less than significant, consistent with the conclusions in the 2004 FEIR. The proposed project does not anticipate any significant stormwater drainage changes beyond those analyzed in the 2004 FEIR. Therefore, the revised project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**f) Summary of 2004 FEIR**

As discussed in impact "a," stormwater runoff from the Vista Del Mar development could potentially grade water quality downstream due to non-point source pollutants associated with urban development. This would result in potentially significant impacts to water quality standards. The 2004 FEIR determined implementation of 2004 FEIR Mitigation Measure 9-4, which involved construction of an extended detention basin to accommodate anticipated stormwater runoff would reduce long-term non-point source pollutants. Therefore, the City

concluded that impacts would be reduced to a less than significant level with incorporation of mitigation.

#### **Proposed Project Analysis and Conclusion**

As discussed in impact “a,” and similar to the evaluation in the 2004 EIR, development of the proposed project could potentially degrade water quality due to non-point source urban pollutants resulting in potentially significant impacts. The proposed project would increase the capacity of the existing stormwater basin to ensure that anticipated peak stormwater flows can be accommodated, in compliance with Mitigation Measure 9-4. Similar to the 2004 FEIR, implementation of 2004 FEIR Mitigation Measure 9-4, which would involve retrofitting of the detention basin to raise the elevation of the outfall structure by 2 feet, would ensure that impacts related to water quality remain less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **g) Summary of 2004 FEIR**

The 2004 FEIR found that the Vista Del Mar development area was not located within a 100-year flood zone as delineated by the Federal Emergency Management Agency’s (FEMA) Flood Insurance Rate Map (FIRM), and no impact would occur. Therefore, no impacts were further discussed.

#### **Proposed Project Analysis and Conclusion**

The proposed project would be located within the same general footprint previously evaluated in the 2004 EIR, and thus would not be located in a 100-year flood zone as designated by FEMA FIRM. Accordingly, no impacts would occur. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **h) Summary of 2004 FEIR**

The 2004 FEIR found that the Vista Del Mar development area is not located within a 100-year flood zone as delineated by the FEMA FIRM. Therefore, no impacts were further discussed.

#### **Proposed Project Analysis and Conclusion**

The proposed project would be located within the same general footprint previously evaluated in the 2004 FEIR, and thus would not be located in a 100-year flood zone as designated by FEMA FIRM. Accordingly, no impacts would occur. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**i) Summary of 2004 FEIR**

The 2004 EIR considered whether construction of the Vista Del Mar development could potentially expose people or structures to significant risk or loss as a result of dam or levee failure. The 2004 EIR noted the development area was not located in vicinity of a dam or levee. Therefore, the City concluded that no impact related to levee and dam failures would occur.

**Proposed Project Analysis and Conclusion**

The project site is within the general footprint previously analyzed by the 2004 EIR. Similar to the 2004 EIR, the proposed project is not located in a dam or levee inundation hazard zone, and no impacts would occur. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

**j) Summary of 2004 FEIR**

The 2004 EIR considered impacts as a result of the Vista Del Mar development associated with inundation by seiches, tsunamis, or mudflows. The 2004 EIR noted that the development area was not at risk to seiches, tsunamis, or mudflows due to its location, and no impacts would occur.

**Proposed Project Analysis and Conclusion**

Similar to the Vista Del Mar development evaluated in the 2004 EIR, the proposed project involves development within the same general footprint as previously evaluated in the 2004 EIR, which is not subject to seiches, tsunamis, or mudflows, and no impacts would occur. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

**Mitigation Measures**

Hydrology and water quality mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 9-1** Provide an on-site stormwater detention facility and maintenance program sufficient to permanently reduce peak rates of runoff into the east highway culvert, in accordance with adopted design and maintenance criteria, and subject to the approval of Caltrans, the CCCFCWCD, and the City Engineer. The project east highway culvert detention basin and all discharge structures shall be dedicated to a maintenance assessment district, in which future project property owners would be responsible for the facility's long term maintenance. Implementation of this measure to the satisfaction of the City Engineer would reduce this identified impact to a less than significant level.

- MM 9-2** The existing rate and volume of stormwater discharges from the project site shall not be increased until the proposed downstream drainage improvements on Lines B and B-1 have been completed and it has been confirmed that project-related discharges would not worsen either the extent or duration of downstream flooding. The applicant shall prepare a hydrology study that (a) confirms that the proposed new culverts to be installed downstream of Highway 4 would have sufficient capacity to accommodate post-development flows from the project site in addition to existing and future flows from the surrounding neighborhoods and (b) identifies which if any existing Line B and B-1 segments located farther downstream might also need upgrades to accommodate higher flow rates and/or alternatively what interim or permanent increase in on site detention storage volume should be provided to lower the rate of discharge during all storms to a level that does not cause new or more widespread flooding within neighborhoods located north of Highway 4. **The developer would then be responsible for design and construction of all improvements within the appropriate sections of Drainage Area 48B, Lines B and B 1 (as well as for any modifications required to also increase the volume of onsite detention storage), as may be identified by CCCFCWCD, based on their review of the hydrology report.**
- MM 9-3** In accordance with National Pollution Discharge Elimination System (NPDES) regulation, prepare a Storm Water Pollution Prevention Plan (SWPPP) consistent with State and RWQCB design standards, for implementation throughout project construction to control erosion on the project site, subject to the approval of the City Engineer. Implementation of this measure would reduce construction-related soil erosion impacts to a less than significant level.
- MM 9-4** To help reduce long-term accumulation of non-point source pollutants from the project within downstream surface water, incorporate long-term source control and pre-discharge treatment measures into the Storm Water Pollution Prevention Plan (SWPPP) described in MM 9-3, in accordance with Municipal Regional Stormwater Permit Order No. R2-2015-0049 NPDES No. CAS612008, subject to the approval by the City Engineering Division. Implementation of this measure would this identified impact to a less than significant level.

## Conclusion

The hydrology and water quality conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                                    | Conclusion in 2004 FEIR                     | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures                                                  |

## Discussion

Given that the proposed project involves the development of the same uses (although with fewer overall residential units and commercial square footage) within the same general footprint, land use impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis of land use and planning impacts. The 2004 FEIR identified three potential impacts utilizing the above environmental issue areas from Appendix G of the *State CEQA Guidelines* as thresholds of significance; all three impacts related to areas south of West Leland Road. As described below, Impacts 4-1, 4-2, and 4-3, as identified and discussed in the 2004 FEIR do not apply to the 2018 proposed project.

**a) Summary of 2004 FEIR**

The initial study prepared as part of the 2004 FEIR concluded that the project would not result in any impact related to physically dividing an established community. The initial study notes that “the project is located within the Pittsburgh city limits and is surrounded by existing or planned urban development and would not divide an established community.” No further analysis is required.

**Proposed Project Analysis and Conclusion**

The proposed project is on the same site as the development previously analyzed in the 2004 FEIR and contemplates similar residential and commercial uses. The proposed project contemplates less development (with an overall reduction the number of residential units and commercial square footage) and a minor shift in the location of the commercial portion of the proposed project from the western side of the site to the center of the site; however, the overall footprint of the proposed project does not differ from the previously approved development.

The proposed project would promote connectivity to the surrounding land uses, which consist of West Leland Road and the Vista Del Mar Subdivision to the south, and the San Marco development, containing residential and commercial developments on the west. Similar to the 2004 FEIR, the proposed project does not include features that would divide an established community, and therefore would be no impact. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR identified three potentially significant impact related to how the Vista Del Mar development could conflict with an applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but no limited to the general plan, specific plan, local coastal program, or zoning ordinance) that was adopted for the purpose of avoiding or mitigating an environmental effect.

In Impact 4-1, the 2004 FEIR discussed the fact that approximately 57 of the proposed single family lots would be located within 150 feet of the PG&E electrical transmission line easement, which could result in concerns and complaints regarding visual and noise effects, as well as electromagnetic field exposure. This relationship raised questions of consistency with the General Plan Policy 2-P-7, which calls for consideration of project compatibility with surrounding sensitive uses and ensuring that sensitive uses such as residences are not subject to hazardous or unhealthy conditions. The 2004 FEIR included Mitigation Measure 4-1, which requires the use of buffers between the residences and transmission lines, as well as notification in writing to all prospective residents of units within 150 feet of the edge of the transmission line easement to confirm the specific power ratings and associated visual characteristics would reduce impacts to less than significant.

In Impact 4-2, the 2004 FEIR indicated that the estate lots located to the south of West Leland Road was adjacent to property under Williamson Act contract. Mitigation 4-2 required notification to all prospective residents of the potential nuisances associated with abutting or nearby agricultural practices would reduce the impact to less than significant.

In Impact 4-3, the 2004 FEIR indicated that the residential development densities may conflict in visual character and scale with the adjoining Oak Hills neighborhood, effects that may be inconsistent with the General Plan, which calls for project compatibility with existing surrounding land uses and use of buffering to separate incompatible uses. Mitigation Measure 4-3 required either the development of detailed design guidelines for the transitional edges of the development, or relocation of higher density residential components to the central or western portion of the site, would reduce impacts to less than significant.

### **Proposed Project Analysis and Conclusion**

The proposed project is located approximately 1,200 feet north of the transmission line, therefore Impact 4-1 is not applicable to the proposed project, and no further analysis of this impact is required.

The project site is not located adjacent to land under the Williamson Act, and therefore Impact 4-2 is not applicable to the proposed project; therefore, no further analysis of this impact is required.

Regarding Impact 4-3, the Oak Hills neighborhood is located south of West Leland Road, and the Vista Del Mar development has already been constructed. The associated mitigation would not therefore be applicable to the 2018 proposed project.

The proposed project does not anticipate any significant land use planning conflict changes beyond those analyzed in the 2004 FEIR, and would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **c) Summary of 2004 FEIR**

The 2004 FEIR did not consider impacts related to applicable habitat conservation or natural community conservation plans as there were no habitat conservation or natural community conservation plans applicable to the Vista Del Mar development area at the time the 2004 FEIR was certified. It was therefore determined that no related impacts would occur.

### **Proposed Project Analysis and Conclusion**

There are no habitat conservation or natural community conservation plans applicable to the project site for the proposed project, and therefore no conflicts could arise. Therefore, the proposed project would not result in impacts different than analyzed under the 2004 FEIR. Therefore, the revised project would not introduce new significant environmental impacts or

create more severe significant environmental impacts than those analyzed in the 2004 FEIR.  
No additional analysis is required.

## Mitigation Measures

No mitigation is required.

## Conclusion

The land use conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                              | Conclusion in 2004 FEIR | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

## Discussion

Mineral resource impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impact 16.3 and related mineral resources impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development could result in the loss of availability of known mineral resources that would be of value to the region and the residents of the state. As discussed in the 2004 FEIR, the California Department of Conservation has concluded that there are no significant mineral deposits in the City of Pittsburg. Therefore, the City concluded that there would be no impacts related to mineral resource that would be of value to the region and the residents of the state.

### Proposed Project Analysis and Conclusion

Similar to the development analyzed in the 2004 FEIR, the project site consists mainly of previously disturbed undeveloped land, historically used for cattle grazing. The proposed

project would be located on the same site as the development previously analyzed in the 2004 FEIR and contemplates the same uses. The California State Mining and Geology Board designates the project site as MRZ-1, an area where adequate information indicates that no significant mineral deposits are present or where it is judged that little likelihood exists for their presence.<sup>2</sup> Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR, which found that no potential impacts to mineral resources. No further analysis is required.

**b Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could result in the loss of availability of a locally important mineral resource site as delineated on a local general plan, specific plan, or other land use plan. The Mineral Deposits map in the *Pittsburg General Plan Update Existing Conditions Report* indicated that there is inadequate information for assignment to any other mineral resource zone. Therefore, the City concluded that there would be no impacts related to a locally important mineral resource recovery site.

**Proposed Project Analysis and Conclusion**

Similar to the development analyzed in the 2004 FEIR, the project site consists mainly of previously disturbed undeveloped land, historically used for cattle grazing. The site is not landscaped and is primarily characterized by bare soil and relatively flat and level ground. The proposed project is on the same site as the development previously analyzed in the 2004 FEIR and contemplates the same uses. Furthermore, the General Plan states that there are currently no significant deposits or active mining operations within the City of Pittsburg.<sup>3</sup> Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR, which found that no potential impacts to mineral resources. No further analysis is required.

## Mitigation Measures

No mitigation is required.

## Conclusion

The mineral resources conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels? | Less than significant   | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Noise impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified three potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 14-1, 14-2, and 14-3 and related noise impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The Vista Del Mar development area is located in an urbanized area adjacent to SR 4. The 2004 EIR considered that housing constructed as a result of the Vista Del Mar development would be located within 300 to 400 feet of SR 4, and along the edge of West Leland Road. The 2004 FEIR found that exterior noise levels at these future homes would exceed the “normally acceptable” noise level guideline established by the City for residential development, thereby resulting in potentially significant impacts. Implementation of 2004 FEIR Mitigation Measures 14-1(a), (b), and (c) would reduce noise levels to within the normally acceptable range. As such, the City concluded that impacts would be reduced to less than significant.

### Proposed Project Analysis and Conclusion

According to the “Revised Noise Contour Analysis,” prepared by Salter Associates in 2018 (Appendix F), the residential units that would be constructed near SR 4 as part of the proposed project would expose residents on private balconies to noise levels of approximately 75 db L<sub>dn</sub>. However, the proposed project no longer includes multi-family units; all proposed residential construction would be single family residences.

Similar to the 2004 FEIR, the proposed project would exceed the City’s 70 db L<sub>dn</sub> conditionally acceptable exterior noise level guideline for single family residences, thereby resulting in potentially significant impact. However, implementation of 2004 FEIR Mitigation Measures 14-1(a), (b) and (c), which require a detailed acoustical study, identification of site design

measures, and construction of noise barriers, where needed, would ensure that resulting noise levels are less than significant. Furthermore, this proposed project would expose fewer residents to excessive noise levels compared to the 2004 FEIR, because the proposed project involves the development of 346 housing units compared to 563 housing units that were evaluated under the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The initial study prepared for the 2004 FEIR concluded that the project would have no impact related to groundborne vibration or groundborne noise. Accordingly, no further analysis was provided in the 2004 FEIR.

**Proposed Project Analysis and Conclusion**

The proposed project would be located on the same site as was evaluated in the 2004 FEIR and associated initial study. Accordingly, similar to the conclusions from the 2004 FEIR initial study, the project would have no impact related to groundborne vibration or groundborne noise. The proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 EIR found that proposed water pump station facilities as part of the Vista Del Mar development (located south of West Leland Road, adjacent to the PG&E transmission line easement) could result in a 3 dBA or more periodic increase in ambient noise levels at the adjoining residential property line. This was determined to be a potentially significant impact. Implementation of 2004 FEIR Mitigation Measure 14-2 would reduce these impacts to less than significant.

The 2004 EIR determined that implementation of the Vista Del Mar development would result in traffic noise increases along roadway segments in the project vicinity of between 1 dBA and 2 dBA. The City concluded that such increases would not cause a significant noise impact.

**Proposed Project Analysis and Conclusion**

As noted above, the pump station is located south of West Leland Road and was constructed as part of the Vista Del Mar development. Therefore, this impact and the associated Mitigation Measure 14-2 do not apply to the 2018 proposed project.

With respect to mobile source noise, while there would be a slight increase in the number of trips associated with the proposed project (despite the overall reduction in the number of residential units and commercial square footage) the increase in vehicle trips is associated with proposed retail uses as opposed to business commercial uses assumed in the 2004 FEIR.

However, this nominal increase would not result in periodic increases in ambient noise levels by three or more dBA to adjoining residential lots. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 EIR found that construction activity on the Vista Del Mar development area would increase noise levels at the adjacent Oak Hills and San Marco developments in excess of 60 dBA. In addition, due to the phasing of the development, this impact was determined to be significant because significant temporary noise impacts would occur over an extended construction period, which could last from six to 15 years. The 2004 EIR requires compliance with the General Plan policy limiting construction hours to between 8:00 a.m. and 5:00 p.m. from Monday to Friday. In addition, 2004 FEIR Mitigation Measure 14-3 would reduce temporary construction noise impacts to the maximum extent practicable. However, the City concluded that impacts would still be significant and unavoidable because of the length of construction period.

**Proposed Project Analysis and Conclusion**

The noise impacts from the construction of the 2018 proposed project would be similar in regard to maximum noise levels evaluated under the 2004 FEIR, but would be anticipated to be substantially less in overall length due to a reduction in the anticipated construction period. Therefore, impacts would remain significant and unavoidable and Mitigation Measure 14-3 would still apply. The proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The closest airport to the previously approved Vista Del Mar development is Buchanan Field Airport located approximately six miles to the southwest in the City of Concord. At this distance, the 2004 FEIR concluded that the Vista Del Mar development would be determined to not be located within the Land Use Compatibility Plan or noise contours. Therefore, given the distance of the development area from the nearest airport, the 2004 FEIR determined that it would not result in significant noise impacts in this regard.

**Proposed Project Analysis and Conclusion**

Consistent with the 2004 FEIR, the 2018 proposed project would develop the same site with the same uses (although with fewer overall residential units and less commercial square footage). The project site is approximately six miles to the northeast of Buchanan Field and not within the Land Use Compatibility Plan or noise contours. Therefore, similar to the analysis set forth in the 2004 FEIR, given the distance of the project site from the nearest airport, the proposed project would not introduce new significant environmental impacts or create more

severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**f) Summary of 2004 FEIR**

The 2004 FEIR did not identify any private airstrips in the vicinity of the development area. Therefore, the City concluded that the Vista Del Mar development would result in no noise impact related to private airstrips.

**Proposed Project Analysis and Conclusion**

Consistent with the 2004 FEIR, the 2018 proposed project would not be located near any private airstrips. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Noise mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

**MM 14-1 Implement the following:**

- (a) Acoustical Study.** Conduct an acoustical study in accordance with state Title 24 requirement that identified to City satisfaction the noise insulation and other features to be included in the design of the project residential structures in the vicinity of SR 4 and along West Leland Road sufficient to maintain interior noise levels at or below City and State standards (45 L<sub>dn</sub>).
- (b) Site Design Measures.** Design common outdoor use areas in the residential portions of the project to maintain exterior noise levels to “normally acceptable” levels. These areas shall be situated away from predominant noise sources or should be shielded by natural or created topographical features, barriers or the buildings themselves.
- (c) Noise Barrier.** Construct a noise barrier for residences proposed adjacent to West Leland Road. The noise barrier should extend approximately five to ten feet above the pad elevations to reduce traffic-generated noise levels to 60 dBA L<sub>dn</sub>. The barrier shall take the form of a wall, berm, and/or structures that shield the outdoor use areas of the first row of residences north and south of West Leland Road.

**MM 14-3 Reduce project construction period noise impacts on nearby residences by incorporating conditions in project construction agreements that, in addition to the applicable construction schedule requirements of the City of Pittsburg General Plan (limit noise-generating construction activities adjacent to existing**

developments to normal business hours between 8:00 a.m. and 5:00 p.m.), and the City's Standard Conditions of Approval regarding construction logistics, stipulate the following conventional construction period noise abatement measures:

- **Construction Equipment Mufflers and Maintenance.** Properly muffle and maintain all construction equipment powered by internal combustion engines.
- **Idling Prohibitions.** Prohibit unnecessary idling of internal combustion engines.
- **Equipment Location and Shielding.** Locate all stationary noise-generating construction equipment such as air compressors as far as practical from the existing nearby school and residences.
- **Quiet Equipment Selection.** Select quiet construction equipment, particularly air compressors, whenever possible. (Fit motorized equipment with proper mufflers in good working order.)
- **Noise Disturbance Coordinator.** Designate a "noise disturbance coordinator" (e.g., a City staff member) who would be responsible for responding to any local complaints about construction noise. The disturbance coordinator would determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and institute reasonable measures warranted to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site.
- **Truck Routes.** Route all construction traffic to and from the project site via designated truck routes where practical. Prohibit construction-related heavy truck traffic in residential areas where feasible.

Even with implementation of these restrictions, however, construction noise would represent a *significant unavoidable impact* (i.e., would require City adoption of a Statement of Overriding Considerations), as a result of the lengthy (approximately 6-to 15-year) construction period.

## Conclusion

The noise conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

## Discussion

Population and Housing impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impact 6.3 and related population and housing impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development could potentially induce substantial growth in population and employment in the area. The development analyzed consisted of 1,100 dwelling units estimated to increase the population by 3,202 people. The development was found to be consistent with the General Plan land use diagrams. The

breakdown of the Vista Del Mar Project by residential type differed from the General Plan as a result of the proposed transfer of residential density within the site towards SR 4 and the BART station. But as explained in the 2004 FEIR, the Vista Del Mar development was not expected to induce population growth beyond what was already anticipated in the General Plan EIR, and the City concluded that impacts would be less than significant.

The *Business Commercial* portion of the Vista Del Mar development was estimated to generate approximately 644 employees, once constructed. The project-related growth increment from buildout would contribute to the associated employment-related cumulative environmental impacts already described in the General Plan. Therefore, as explained further in the 2004 FEIR, the Vista Del Mar development would not be expected to induce substantial employment growth in the area beyond what was already anticipated in the General Plan EIR. For these reasons, the 2004 FEIR concluded that impacts in this regard would be less than significant.

### **Proposed Project Analysis and Conclusion**

The proposed project would develop fewer residential units and less commercial retail development than was contemplated in the 2004 FEIR, and in the 2008 Addendum.

The 2018 proposed project includes 346 housing units on approximately 25.93 acres, while the 2004 FEIR included 563 multi-family housing units on 32.1 acres.

Similarly, the 2018 proposed project includes up to 140,000 sf of retail/commercial uses on 12 acres, while the 2004 FEIR included 257,500 sf of commercial buildings on 14.8 acres.

The proposed project's design requires a minor modification to the location of some portions of the residential and commercial uses and accompanying zoning; however, the overall proposed land uses and intensity remain consistent with the uses and intensity analyzed in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **b) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially displace a substantial number of existing housing units. The Vista Del Mar development area contained two houses that were occupied by the former owners and their family. While these two homes would need to be demolished, the development would result in a net increase of 1,098 dwelling units. Therefore, the 2004 FEIR concluded that, because the Vista Del Mar development would add substantially more units than would be demolished, impacts would be less than significant.

### **Proposed Project Analysis and Conclusion**

The project site does not contain any housing units and thus no existing housing would be displaced. The proposed project would result in the construction of 346 housing units, and

does not anticipate any population and housing changes beyond those analyzed in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially displace a substantial number of people and necessitate the construction of replacement housing elsewhere. The Vista Del Mar development contained two houses, which would need to be demolished, that were occupied by the former owners and their family. The development would result in a net increase of 1,098 dwelling units. Therefore, the Vista Del Mar development would add substantially more units than would be demolished, and the City concluded that impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

The project site does not contain any housing units and thus no people would be displaced. The proposed project would result in the construction of 346 housing units, and does not anticipate any population and housing changes beyond those analyzed in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

No mitigation is required.

## Conclusion

The population and housing conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| d) Parks?                                                                                                                                                                                                                                                                                                                                                                                                                       | Less than Significant with mitigation | No                                                                      | No                                                                  | No                                                      | 8-8 and 8-9                   |
| e) Other public facilities?                                                                                                                                                                                                                                                                                                                                                                                                     | Less than significant                 | No                                                                      | No                                                                  | No                                                      | None                          |

## Discussion

Public services impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified five potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 8-5, 8-6, 8-7, 8-8, and 8-9 and related public services impact discussions collectively address the above environmental issue areas as described below.

Two of the Impacts (8-6 and 8-7) relate to development south of West Leland Road, and would not therefore be applicable to the 2018 proposed project. Accordingly, the discussion of those two impacts is not carried forward into the 2018 proposed project.

### a) Summary of 2004 FEIR (fire protection)

The Vista Del Mar development was determined to increase demand for fire protection and emergency medical services provided by the Contra Costa County Fire Protection District (CCCFFPD).

The 2004 FEIR determined that the Vista Del Mar development had the potential to conflict with City of Pittsburg and CCCFPD standards for road design for residential estate lots in the southern portion of the site, leading to the potential for impairment in meeting response times and evacuation goals, policies, and standards (2004 FEIR Impact 8-6). Furthermore, the development in the southern portion of the site would introduce urban uses adjacent to wildland areas where fire risks are high (2004 FEIR Impact 8-7). The City concluded that this potential impact associated with the development would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-6 and 8-7.

To meet the potential project-generated and cumulative demand for fire protection and fire response time goals, Fire Service Fees were required to be earmarked to help construct a new fire station in the project vicinity on a square and level one-acre parcel that meets the CCCFPD's location and site criteria. However, until CCCFPD facilities expansion needs could be identified in terms of size, staffing, equipment, and location, the assessment of associated environmental impacts would be highly speculative. The 2004 FEIR concluded that the project-related and cumulative effect would therefore not represent a significant "environmental" impact under CEQA and thus impacts would be less than significant.

### **Proposed Project Analysis and Conclusion**

The project site would be served by the CCCFPD. The nearest fire station is located at 800 West Leland Road, approximately 1.25 miles east of the project site. According to the General Plan, the response time goal is five minutes, and generally this goal can be reached for a location within 1.5 miles of a fire station.<sup>4</sup> The demand for fire service protection services associated with the 2018 proposed project would be less than what was evaluated in the 2004 FEIR, given the overall reduction in the number of residential units, lower commercial square footage, and the absence of further development south of West Leland Road. The proposed project would be subject to applicable Fire Service Fees, and the City of Pittsburg's Community Facilities District (CFD) 2017-1 for Fire Protection Services, to continue fund raising for a new station to enhance fire protection services for area residents.

Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **b) Summary of 2004 FEIR (police protection)**

As discussed in the 2004 FEIR, the Vista Del Mar development would increase demand for police services in the project site vicinity. To be consistent with General Plan's performance standard of 1.8 sworn officers per 1,000 people, approximately six additional sworn officers and associated support facilities would be needed in response to the estimated approximately 3,201 new residents. However, this increase in staffing did not represent a significant environmental impact under CEQA because this additional staff and support facilities could be

<sup>4</sup> City of Pittsburg. 2001. General Plan Pittsburg: A Vision for the 21<sup>st</sup> Century. November.

accommodated within existing facilities, and therefore no new or expanded law enforcement facilities would be necessary. Accordingly, the 2004 FEIR concluded that impacts would be less than significant.

The 2004 FEIR also evaluated whether project-related traffic would create congestion on West Leland Road, possibly delaying emergency response and limiting the Police Department's ability to evacuate the development area safely during an emergency or major disaster (Impact 8-5). The City concluded that this potential impact would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-5, which requires implementation of all traffic related mitigation measures (2004 FEIR, Chapter 7), as well as review by the police department of proposed emergency access provisions prior to tentative map approval.

### **Proposed Project Analysis and Conclusion**

The proposed project's impact on police services has already been analyzed in the 2004 FEIR; impacts would be less than what was evaluated in the 2004 FEIR given that the proposed project contemplates less development with an overall reduction of residential units and commercial square footage. In any event, consistent with the analysis in the 2004 FEIR, any potential impacts associated with the proposed project would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-5, as noted above. Mitigation Measure 8-5 requires implementation of all traffic related mitigation measures (2004 FEIR, Chapter 7), as well as review by the police department of proposed emergency access provisions prior to tentative map approval. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **c) Summary of 2004 FEIR (schools)**

The Vista Del Mar development area is served by the Mt. Diablo Unified School District (MDUSD). The 2001 General Plan EIR states, "new residential development in the Planning Area may generate additional student enrollment that would need to be accommodated by Mount Diablo Unified School." This impact is mitigated by the payment of school impact fees. State law limits the ability of a local jurisdiction to impose mitigation obligations in connection with school facilities impacts; specifically, to mitigate such impacts, the developer would be required to pay applicable school impact fees. Based on the required payment of school impact fees, the City concluded that impacts to school facilities were less than significant.

### **Proposed Project Analysis and Conclusion**

As noted in the 2004 FEIR, the project site is served by UMDUSD. Consistent with the analysis in the 2004 FEIR, the proposed project would be subject to applicable SB 50 school impact fees, which state law has determined represents full mitigation for potential impacts related to increased student enrollment. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR (parks)**

The 2004 FEIR notes that the project is generally consistent with the land use designations of the 2001 General Plan and therefore the General Plan EIR included the build out of the Alves Ranch project and associated effects on parks. The 2001 General Plan EIR stated, “future development may create a shortage of neighborhood park facilities accessible to all residents.” The 2004 FEIR determined that creation of park dedication and/or payment of a park in-lieu fee as discussed in Mitigation Measure 8-8 would fully mitigate any potential effects in this regard.

**Proposed Project Analysis and Conclusion**

The proposed project would increase demand for park and recreation in the project vicinity (2004 FEIR Impact 8-8), as previously evaluated in the 2004 FEIR. In addition, future Alves Ranch residents and employees, together with residents and employees of other anticipated development in the project vicinity, would contribute to a cumulative increase in demand for recreation facilities in the project site vicinity (2004 FEIR Impact 8-9). Accordingly, the proposed project would be expected to generate increased use of existing neighborhood parks, regional parks, and other City recreational facilities, such that substantial physical deterioration of these facilities could occur or be accelerated. However, this impact was previously evaluated in the 2004 FEIR; furthermore, the proposed project’s impacts in this regard would be lower than previously determined given the overall reduction in residential unit count and commercial square footage. The proposed project includes a total of approximately 0.9 acre for pedestrian circulation and/or active recreation and a total of approximately 1.28 acres of landscaped and irrigated open space. Also, an approximately 12-foot-wide Class I trail would be constructed on the north side of West Leland Road along the project frontage, connecting to an existing sidewalk to the west.

Furthermore, any potential impacts would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-8, which requires the payment of fees pursuant to Municipal Code section 17.32. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR (other facilities)**

The 2004 FEIR did not specifically evaluate whether development would result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, triggering the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities.

While the initial study called out the need for further review, it focused on water, sewer, and solid waste, and did not identify other facilities such as libraries in the analysis.

## Proposed Project Analysis and Conclusion

The proposed project would generate demand for public facilities, although because of the reduced unit count it would generate proportionately less demand than the 2004 Vista Del Mar development. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Public services mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 8-5**      **Implement mitigation measures identified in Chapter 7, “Traffic and Circulation,” of the 2004 FEIR to reduce the impacts on project-related traffic on West Leland Road and other local roads. In addition, require Police Department to review and approval of project-proposed emergency access provisions prior to Tentative Subdivision Map approval. Implementation of these measures would reduce project impacts on emergency response and evacuation to a less-than-significant level.**
- MM 8-8**      **To the satisfaction of the City, require the project applicant to comply with the park dedication requirements of chapter 17.32 of the City’s Municipal Code. Compliance with these requirements, which allow for either parkland dedication or payment of an in-lieu fee, would reduce the project’s impact on existing City park and recreation facilities to a less-than-significant level.**

## Conclusion

The public services conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                       | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

## Discussion

Recreation impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impact 8-8 and related recreation impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development could potentially increase the use of existing parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. The Park Development Division maintains acquisition of new parks and maintains recreational facilities and community centers in the City. Vista Del Mar project residents and employees would increase the demand for park and recreation services in project vicinity. Although the development consisted of 11.33-acre school/park site and individual tot lot, the 2004 FEIR concluded that development did not

include adequate public parks based on the estimated population increase of 2,651 and the city's parkland ratio of 5 acres per 1,000 residents, which indicates a need for 13.26 acres of parkland. Accordingly, the Vista Del Mar development could generate increased use of existing parks and City recreational facilities, such that substantial deterioration of facilities would occur or be accelerated (Impact 8-8). The cumulative increase in parks and recreation service demand could be expected to generate increased use of existing parks and facilities as well (Impact 8-9). The City concluded that this potential impact associated with the development would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-8, which requires compliance with Chapter 17.32 of the Municipal Code, including the provision of additional parklands or payment of an in-lieu fee.

### **Proposed Project Analysis and Conclusion**

The proposed project is on the same site as the project previously analyzed in the 2004 FEIR and contemplates the same uses. Furthermore, the proposed project contemplates less development in terms of overall residential unit count and commercial square footage, and therefore impacts would be lower than previously evaluated in the 2004 FEIR. In addition, the proposed project would provide several open space areas, shown as a series of green areas the site plan; a total of approximately 0.9 acres for pedestrian circulation and/or active recreation; and a total of approximately 1.28 acres of landscaped and irrigated open space are contemplated, which would be available to project residents and employees for recreational activities. The open space areas would be owned and maintained by the homeowners associations of the adjoining neighborhoods.

Mitigation Measure 8-8 would still apply to the project, ensuring compliance with the Municipal Code as it relates to the provision of parkland acreage or payment of an in-lieu fee. For the above reasons, similar to the 2004 FEIR, the impacts would be less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **b) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would include recreational facilities or require the expansion of recreational facilities, and concluded that, because the development would be required to comply with Municipal Code chapter 17.32, requiring the provision of sufficient parkland acreage or payment of an in-lieu fee, further expansion of facilities would not be triggered. For this reason, the City concluded that the development impact would be less than significant.

### **Proposed Project Analysis and Conclusion**

The proposed project is on the same site as the project previously analyzed in the 2004 FEIR and contemplates the same uses, but at a reduced density. Therefore, impacts associated with the 2018 proposed project would be reduced from what was evaluated and disclosed in the

2004 FEIR. The project does include the construction of approximately 0.9 acres for pedestrian circulation and/or active recreation and a total of approximately 1.28 acres of landscaped and irrigated open space. The construction of these facilities would be within the footprint of the proposed residential and commercial development, and would not therefore require the construction or expansion of facilities that could have an adverse effect on the environment. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Recreation mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

**MM 8-8**      **To the satisfaction of the City, require the project applicant to comply with the park dedication requirements of chapter 17.32 of the City's Municipal Code. Compliance with these requirements, which allow for either parkland dedication or payment of an in-lieu fee, would reduce the project's impact on existing City park and recreation facilities to a less-than-significant-level.**

## Conclusion

The recreation conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                                                                                                                                                      | Conclusion in 2004 FEIR                     | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures     |

| d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?                                 | No impact                                   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| e) Result in inadequate emergency access?                                                                                                                                              | No impact                                   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? | Significant and unavoidable with mitigation | No                                                                      | No                                                                  | No                                                      | 7-8                           |

## Discussion

Transportation/traffic impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 7-1 through 7-8 and related transportation/traffic impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development could potentially conflict with applicable measures of effectiveness for the performance of the circulation system. Fehr and Peers conducted a traffic impact study for the development that contemplated four traffic scenarios. Scenarios included baseline, baseline plus project, cumulative, and cumulative plus project conditions. The 2004 FEIR determined that significant impacts would occur under these scenarios to several intersections, and that 2004 FEIR Mitigation Measures 7-1 to 7-7 would reduce these impacts. However, the mitigation would not fully reduce impacts, as the City concluded that impacts would remain significant and unavoidable regarding local applicable measures of performance.

## **Proposed Project Analysis and Conclusion**

For purposes of a conservative analysis, a trip generation assessment was performed by Fehr and Peers on June 6, 2018 (Appendix G) to evaluate the proposed project's transportation impacts compared to the previous evaluation in the 2004 FEIR. According to the trip generation assessment, the proposed project would result in fewer peak hour vehicle trips compared to the 2004 FEIR project, although average daily trips would increase as a result of the increased retail/grocery component compared to the business commercial uses evaluated in the 2004 FEIR. Accordingly, 2004 FEIR Mitigation Measures 7-1 to 7-7 would still be imposed on the proposed project, funding a range of transportation improvements in the project vicinity.

Similar to the analysis and conclusions presented in the 2004 FEIR, the implementation of some of the transportation improvements must be completed by other jurisdictions; because implementation is out of the control of the City, the impacts are considered significant and unavoidable until such time as the improvements are constructed and operational. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **b) Summary of the 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially conflict with an applicable congestion management program, including but not limited to level of service (LOS) standards and travel demand measures, or other standards established by the county congestion management agency for the designated roads or highways. As described above, Fehr and Peers conducted a traffic impact study in 2004 that contemplated traffic scenarios under baseline, baseline plus project, cumulative, and cumulative plus project traffic conditions. Under these scenarios, the 2004 FEIR determined that significant traffic impacts would occur at several study intersections. Implementation of 2004 FEIR Mitigation Measures 7-1 through 7-7 would reduce these impacts to the extent feasible; however, the City concluded that significant and unavoidable impacts would still occur because implementation must be completed by other jurisdictions outside the control of the City.

## **Proposed Project Analysis and Conclusion**

As discussed previously, Fehr and Peers conducted an updated trip generation assessment (Appendix G) for the proposed project. According to this assessment, the proposed project would result in fewer peak hour vehicle trips compared to the 2004 FEIR, but slightly more average daily trips as a result of the increased retail/grocery component compared to the business commercial uses evaluated in the 2004 FEIR. Although the proposed project would have fewer peak hour trips and thus not worsen the effect as described in the 2004 FEIR, the impacts under the applicable LOS standards would remain the same. Accordingly, the proposed project would be required to implement Mitigation Measures 7-1 through 7-7 to reduce impacts to the extent feasible. Therefore, the proposed project would not introduce

new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The initial study prepared as part of the 2004 FEIR considered whether the Vista Del Mar development could potentially change air traffic patterns resulting in substantial safety risks. The initial study determined that the project would have no impact related to air traffic patterns; accordingly, no further analysis was required in the 2004 FEIR.

**Proposed Project Analysis and Conclusion**

Similar to the 2004 FEIR, the proposed project would not have any impacts related to air traffic patterns because the location remains the same and the distance to the nearest airport has not changed. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially increase hazards due to a design feature. The 2004 FEIR notes that the project site plan did not provide detailed circulation information for the area north of West Leland Road, and therefore on-site circulation could not be effectively analyzed. Circulation patterns and recommendations would be provided when detailed plans are submitted. The 2004 FEIR also recommends that direct pedestrian access be provided from the multi-family residential and commercial portions of the project to the BART station.

**Proposed Project Analysis and Conclusion**

Fehr & Peers conducted a review of on-site circulation in 2018, based on the detailed site plan provided for the 2018 proposed project. The results of this analysis informed the project description and application materials submitted by the applicant to ensure adequate circulation and provision of enhanced bicycle and pedestrian facilities to encourage and support the use of BART and bus service.

As noted in the project description, the project includes pedestrian enhancements such as a new sidewalk along the north side of West Leland Road to close an existing 1,100-foot sidewalk gap. The project also proposes enhanced crosswalks and bike racks in the commercial portion of the site to encourage and support alternative transportation modes. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR considered potential impacts to project site access and emergency vehicle access. Access relates to levels of service operation of intersections, roadway segments and on-site circulation, and is therefore tied to the implementation of transportation improvements required by Mitigation Measures 7-1 through 7-7. The 2004 FEIR concluded that although the implementation of the required mitigation would ensure adequate circulation and access to the site, the construction of some of the improvements are outside the control of the City and cannot therefore be guaranteed. Accordingly, the 2004 FEIR concluded that related impacts would remain significant and unavoidable until such time as the improvements are constructed and operational.

**Proposed Project Analysis and Conclusion**

Similar to the conclusion of the 2004 FEIR, implementation of Mitigation Measures 7-1 through 7-7 cannot be guaranteed and the resulting impact would remain significant and unavoidable until such time as the improvements are constructed and operational.

Regarding on-site access and circulation, as discussed in the project description, access to the site is proposed from three locations on West Leland Road. The main entrance would be at Alves Ranch Road, which would be a fully signalized intersection. A full access un-signalized intersection is also proposed west of Alves Ranch. This intersection would be offset from Tomales Bay Drive. A third EVA-only access is proposed on the eastern portion of the site approximately 500 feet east of Alves Ranch Road. The Fehr & Peers analysis and review by the City traffic engineer conclude that the proposed access would be adequate to serve the proposed site development and would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**f) Summary of 2004 FEIR**

The 2004 FEIR recommended that commercial uses on the project site have direct access to West Leland Road and direct pedestrian access be provided from the multi-family residential and commercial areas to the Pittsburgh/Bay Point BART station. In addition, the 2004 FEIR noted that the Vista Del Mar development required pedestrian and bicycle routes along public streets and within the proposed linear park system. The 2004 FEIR identified impacts to the nearby Pittsburgh/Bay Point BART parking lot, which was experiencing capacity issues at the time. The 2004 FEIR imposed Mitigation Measure 7-8, which requires provision of bus turnouts and transit amenities along the project frontage; however, the 2004 FEIR noted that these improvements would not completely mitigate the identified impact, and as a result the impact would remain significant and unavoidable.

## Proposed Project Analysis and Conclusion

The proposed project would result in fewer housing units and fewer residents compared to the 2004 FEIR. As a result, the proposed project would create less demand for pedestrian, bicycle, and transit services. Similar to the development evaluated in the 2004 FEIR, the proposed project is within walking distance of the Pittsburg/Bay Point BART station, and thus it is likely that transit use would increase given the close proximity to BART, which is consistent with applicable General Plan policies.

As noted in the project description, the project includes pedestrian enhancements such as a new sidewalk along the north side of West Leland Road to close an existing 1,100-foot sidewalk gap, which would directly support pedestrian connection to the BART station. The project also proposes enhanced crosswalks and bike racks in the commercial portion of the site to encourage and support alternative transportation modes. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Transportation/traffic mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

**MM 7-1      The project applicants shall contribute their fair share to the needed improvements at the Willow Pass Road/San Marco Boulevard/SR 4 Eastbound ramps intersection, which include the following:**

- **Re-striping of the southbound approach to reduce the lane configuration to one through lane, which creates an opportunity for a free right-turn at the eastbound off-ramp; and**
- **Creation of a free right-turn lane on the eastbound off-ramp, in addition to two dedicated left-turn lanes for a total of three approach left-turn lanes on the off-ramp.**

**The additional eastbound lane may require acquisition of right of way and the design would require approval from Caltrans. These improvements to be funded by the existing City and Easy County traffic mitigation fee programs. These improvement may be added to the City's Traffic Mitigation Fee Program so that the necessary funds will be made available. The project applicants pay their fair share contribution to these improvements.**

**Implementation of these improvements would reduce this impact to a less than significant level.**

**MM 7-2** In order to achieve an acceptable LOS at this intersection under future General Plan based cumulative conditions, the following improvement would be necessary:

- Create a westbound shared through/right-turn lane on West Leland Road;
- Create a second eastbound Left-turn lane on West Leland Road;
- Create a second eastbound through lane on West Leland Road; and
- Create an exclusive eastbound right-turn lane on West Leland Road

However, the creation of such additional capacity on the eastbound approach to this intersection would require substantial acquisition of additional right-of-way on land that has already been developed, which is not considered to be feasible given current constraints.

Alternatively, the morning (AM) peak hour operation as this intersection could be improved by adding a second eastbound left-turn lane on West Leland Road, which might be physically feasible. This measure shall be required if feasible. However, this improvement, the intersection would still operate at LOS F during both the AM and PM peak hour; so this measure would not reduce this impact to a less than significant level. Therefore, this cumulative impact is considered significant and unavoidable. The project applicant shall pay their fair share contribution towards any of these improvements deemed feasible by the City.

**MM 7-3** Project applicants shall pay a traffic mitigation fee equal to their fair share of the improvements needed to adequately serve projected cumulative morning (AM) and evening (PM) peak hour traffic volumes at the Bailey Road/Concord Boulevard intersection in the City of Concord. These improvements include:

- Construction of exclusive right-turn and left-turn lanes and a second through lane on the northbound approach;
- Construction of two exclusive left-turn lanes on the southbound approach; and
- Construction of a third through lane on both the eastbound and westbound approaches.

This fee shall be paid prior to recordation of a project final map, in an amount determined by the City Council in cooperation with the affected jurisdiction.

Implementation of this measure would reduce this cumulative impact to a less than significant level; however, this impact will remain a significant unavoidable cumulative impact until the improvements are installed by responsible jurisdiction that is to receive this fair share fees.

**MM 7-4** The project applicants shall contribute their fair share to the following needed improvements at the San Marco Boulevard/West Leland Road intersection:

- Convert the northbound shared through/right turn lane to an exclusive right turn lane; and
- Convert one of the northbound left-turn lanes to a northbound through lane.

Implementation of these improvements would involve changing the lane configuration at the intersection. Additional right of way acquisition would not be required. These improvements are not included in the current list of improvements to be funded by the existing City or East County traffic mitigation fee programs. This improvement may be added to the Traffic Mitigation Fee Programs so that the necessary funds will be made available. The project applicants shall pay their fair-share contribution to this improvement.

Implementation of these measures would reduce this impact to a less than significant level.

**MM 7-5** The project applicants shall contribute their fair-share to needed improvements at the Willow Pass Road/Avila Road intersection with two left-turn lanes and a right-turn lane on the westbound Avila Road approach, two left-turn lanes and a through lane on the southbound Willow Pass Road approach, and one right-turn lanes and one through lane on the northbound Willow Pass Road approach. The City shall work with other affected jurisdictions to develop an interjurisdictional funding mechanism for these improvements. These improvements may be included in the Pittsburg Traffic Mitigation Fee Program so that the necessary funds will be available at the time the improvements are needed. Otherwise, the project applicants shall be responsible for these improvements before development proceeds. These identified improvements would reduce this impact to a less than significant level.

**MM 7-6** The project applicants shall pay a traffic mitigation fee equal to their fair share of the improvements needed to adequately serve projected cumulative morning (AM) and evening (PM) peak hour traffic volumes at the Bailey Road/Myrtle Drive intersection in Contra Costa County and the City of Concord. These improvements include:

- Installation of a traffic signal
- Provision of a left-turn lane on the southbound Bailey Road approach; and
- Widening of the westbound Myrtle Drive approach to provide an exclusive left-turn lane.

Implementation of this measure would reduce this cumulative impact to a less than significant level; however, this impact will remain a significant unavoidable cumulative impact until the improvements are installed by responsible jurisdiction that are to receive these fair share fees.

- MM 7-7** As described above, the project applicants shall contribute their fair share to all applicable development impact fee programs including the East County Regional Impact Fee, which is designed to fund improvements to regional facilities including SR 4. However, the segment of SR 4 Between Willow Pass Road (Pittsburg) and Willow Pass Road (Concord) was improved several years ago, and no further improvements are included in the Strategic Plan of the Eat Contra Costa Regional Fee and Finance Authority. In the absence of addition capacity-enhancing freeway improvement projects, this cumulative impact is considered significant unavoidable.
- MM 7-8** The project shall construct bus turnouts and related transit amenities along the project frontage on West Leland Road and on internal roadways as needed. The placement and design of these amenities shall be determined in consultation with the City and Tri-Delta Transit. The purpose of these amenities would be to encourage transit use to the BART station. It is unlikely, however, that such improvement would entirely mitigate the identified cumulative impacts on BART parking. Therefore, in the absence of additional parking, this project impact is considered significant unavoidable.

## Conclusion

The transportation/traffic conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                               | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| <i>Would the project:</i>                                                                                                                                                                              |                                       |                                                                         |                                                                     |                                                         |                               |
| a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?                                                                                                    | N/A                                   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 8-3                           |
| c) Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?           | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 9-1 and 9-2                   |
| d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?                                                 | Significant and unavoidable           | No                                                                      | No                                                                  | No                                                      | 8-1 and 8-2                   |

| Environmental Issue Area                                                                                                                                                                                                          | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|-------------------------------------------------------------------------|---------------------------------------------------------------------|---------------------------------------------------------|-------------------------------|
| e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 8-3                           |
| f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?                                                                                                            | Less than significant                 | No                                                                      | No                                                                  | No                                                      | N/A                           |
| g) Comply with federal, State, and local statutes regulations related to solid waste?                                                                                                                                             | Less than significant                 | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Utilities and service systems impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. Utilities and service systems impact discussions in Chapters 8 and 9 of the 2004 EIR collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The initial study prepared as part of the 2004 FEIR found that the project would have no impact related to wastewater treatment requirements, noting that "all project-related development would be subject to applicable wastewater treatment requirements, and would not cause exceedances of RWQCB treatment requirements." No further analysis is required.

**Proposed Project Analysis and Conclusion**

As noted above, the initial study prepared as part of the 2004 FEIR found that the project would have no impact related to wastewater treatment requirements, noting that “all project-related development would be subject to applicable wastewater treatment requirements, and would not cause exceedances of RWQCB treatment requirements.” No further analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR discussed the capacity of the Delta Diablo Sanitation District (DDSD) to accommodate estimate wastewater flows from the project. The 2004 FEIR noted that although DDSD had sufficient capacity at that time, the extended timeline for build out of the Vista Del Mar project could result in less than sufficient capacity being available for later phases. Mitigation Measure 8-3 was included to require payment of appropriate fees as well as submittal of a sewage treatment adequacy evaluation to ensure that sufficient capacity would be available before building permits are issued for future phases. Implementation of Mitigation Measure 8-3 would ensure that impacts would be reduced to less than significant.

**Proposed Project Analysis and Conclusion**

Sanitary sewer service in the City of Pittsburg is provided by the City of Pittsburg and the Delta Diablo Sanitation District (DDSD). The DDSD administers the provisions of the wastewater discharge permit issued for its operations, subject to the requirements and limitations of the NPDES program enforced by the RWQCB.

The proposed project contemplates less development but in a manner consistent with the 2004 FEIR. Thus, demands placed on the wastewater collection and treatment system would be consistent with, albeit less than, utility demands generated by the 2004 FEIR. As described in the 2004 FEIR, the project would require connection to sewer lines, although the connection in 2018 would be to existing lines in West Leland Road, as the connection to lines in Willow Pass Road contemplated in the 2004 FEIR has already been constructed.

The DDSD treatment facility continues to have sufficient capacity to accommodate the proposed project. Furthermore, the proposed project would be required to implement NPDES requirements as appropriate, including the use of best management practices applicable to businesses that operate throughout the City. Therefore, the proposed project would not exceed wastewater treatment requirements and the impact would be less than significant, consistent with the analysis in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 FEIR found that construction of the Vista Del Mar development would create new impervious surfaces and increase the rate of stormwater runoff. This would be a potentially

significant impact because peak flow rates could exceed the existing planned capacity of downstream drainage systems. In addition, the CCCFCWCD determined the existing culvert and channel section were undersized to accommodate the Vista Del Mar development. These impacts could be potentially significant. With the implementation of 2004 FEIR Mitigation Measures 9-1 and 9-2, which required the construction of new stormwater drainage facility and increased capacity of downstream drainage facilities, the potential impacts associated with the development would be reduced to less than significant.

### **Proposed Project Analysis and Conclusion**

As required by the 2004 FEIR, a stormwater detention facility was built in the northern portion of the project site as part of the Vista Del Mar development. This detention facility was built in order to mitigate post development 10-year peak flows from the Vista Del Mar, San Marco, and Alves Ranch developments. According to the Stormwater Calculations memorandum, analysis indicated that the volume in the water quality basin is slightly less than was originally calculated in 2008.

As described in the project description, to accommodate the currently estimated volume of stormwater runoff, the applicant proposes to increase the capacity of the stormwater detention basin by raising the elevation of the existing outfall by 2 feet. This proposed improvement would ensure that the project remains in compliance with Mitigation Measure 9-1. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **d) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would have sufficient water supplies available to serve the development from existing entitlements and resources, or if new or expanded entitlements are needed. The 2004 FEIR noted that on-site groundwater wells provided water for the existing residences, office building, and construction yard operation. The Vista Del Mar development area is located within the Contra Costa Water District (CCWD) service area boundaries, and within the boundaries of the Los Vaqueros Project (LVP) planning area, and would be served by the City through a wholesale contract with CCWD. The Vista Del Mar 2004 FEIR estimated that the development would generate approximately 624,000 gallons of domestic water demand. The Water Supply Assessment indicated that the City may not be able to meet projected demands in the latter years of a multi-year drought (2004 FEIR Impact 8-1). The City concluded that this potential impact associated with the development would remain significant and unavoidable until such time as achievable water supplies are identified.

Following certification of the 2004 FEIR, and in accordance with Mitigation Measure 8-1, the applicant provided a subsequent water analysis and demonstrated to the satisfaction of the city that sufficient water would be available for the development as proposed in 2004.

**Proposed Project Analysis and Conclusion**

According to the Alves Ranch Development Future Demand Memorandum (Appendix H), the 2018 project water demand would be approximately 19 percent less than what was shown in the City of Pittsburg Water System Master Plan and discussed in the 2004 FEIR, because of the reduction in overall residential unit count and commercial square footage. As the applicant has already established sufficient water for the higher demand estimates assumed in the 2004 FEIR, the 2018 proposed project would therefore have sufficient water supplies to meet its estimated demand. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments.

The DDSD estimates the sewage generated by the development would equate to 1,211 equivalent residential units (ERUs), sewage generation level below DDSD's 1996 buildout anticipated level of 1,218 ERUs. By the time of buildout, DDSD treatment facilities may not have adequate capacity due to other cumulative development demands, as identified in 2004 FEIR Impact 8-3. Sewage treatment demand associated with the Vista Del Mar development, combined with demand from development pending, approved, or under construction in the project vicinity and elsewhere in Pittsburg, may exceed the available treatment plant capacity. The City concluded that this potential impact associated with the development would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-4.

**Proposed Project Analysis and Conclusion**

The proposed project contemplates less development but in a manner consistent with the 2004 FEIR. Because of the reduced unit count, the 2018 proposed project would demand less wastewater treatment than what was estimated in the 2004 FEIR and the impact would be less than significant. Mitigation Measure 8-3 would still be imposed, which requires payment of applicable DDSD service fees. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**f) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would be served by a landfill with sufficient permitted capacity. The 2004 FEIR determined that new development could generate demand for solid waste services and that the Potrero Hills landfill had sufficient capacity to serve the solid waste demands of the project. The City concluded that compliance

with General Plan policies and City ordinances applicable to recycling would ensure impacts are less than significant.

### Proposed Project Analysis and Conclusion

The proposed project would develop 217 fewer residential units and less overall commercial square footage compared to the development analyzed in the 2004 FEIR, resulting in fewer impacts than previously evaluated. The proposed project would be served by a landfill that continues to have sufficient capacity and the impact would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### g) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development would comply with all Federal, State, and local policies related to solid waste. The 2004 FEIR determined that new development could generate demand for solid waste services, and the City concluded that compliance with General Plan policies and City ordinances applicable to recycling would ensure impacts are less than significant.

### Proposed Project Analysis and Conclusion

Similar to the 2004 FEIR project, the proposed project would comply with all applicable solid waste policies and regulation resulting in less than significant impacts. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Utilities and service systems mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 8-1** As required by State SB 221, prior to City approval of a final map for the proposed project, the City of Pittsburgh Community Development Department shall undertake a subsequent water supply analysis, which shall describe the citywide water supply situation at that future time (including valid water rights, infrastructure financing, permits, and approvals), including the status of (i.e., City progress on) current City studies and plans for expanding its reclaimed water program and conservation efforts and finding opportunities for future short-term water purchases. As required by SB 221, no final map shall be approved for the project until the City concludes, based on a written verification prepared in compliance with SB 221 and on the availability of other water supplies, as demonstrated by substantial evidence in the record, that sufficient water will be available to serve the proposed project needs, in

addition to existing and planned future uses, during normal, single dry, and multiple dry years within a 20-year projection.

**The project applicant shall be required to comply with all applicable current and future City of Pittsburg water demand performance standards, including standards included in the City of Pittsburg Urban Water Management Plan, the City's reclaimed water project, and the City's water conservation program.**

Minus substantial evidence that these measures would mitigate this impact—i.e., would lead to the identification and realization of adequate additional water supplies—the effectiveness of this mitigation measure is unknown at this time. Therefore, until achievable water supplies are identified, this impact is considered to be significant unavoidable impact.

- MM 8-3**      **As a condition of Tentative Subdivision Map approval, the applicant shall: (1) comply with applicable per-unit conveyance system fees levied by DDSD and (2) demonstrate to the satisfaction of the DDSD and the City Engineer that DDSD sewage treatment capacity will be adequate to serve the development. This requirement shall be met through preparation of a sewage treatment adequacy evaluation in coordination with and to the satisfaction of the City Engineer. No project development requiring sewage treatment service beyond the 1218-ERU total anticipated by the DDSD shall be allowed until adequate sewage treatment capacity is demonstrated as required by this mitigation measure. Implementation of this measure would reduce the project's potential impact on sewage treatment service to a less-than-significant level.**

## Conclusion

The utilities and service systems conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

## Appendix A: Biological Resources Memorandum

## MEMORANDUM

**DATE:** June 27, 2018

**TO:** Mandy Leung and Scott Hilk

**FROM:** Ross A. Dobberteen, Ph.D.

**SUBJECT:** Review of Current Biological Conditions in the Alves Ranch Project Area with Respect to 2004 DEIR Mitigation Measures, Vista Del Mar in Pittsburg, Contra Costa County, California

Per your request, LSA, Inc. (LSA) presents this memo regarding our review of current site conditions at the Alves Ranch Project Site south of West Leland Road near the Vista Del Mar residential development in Pittsburg, California. The purpose of our assessment was to determine if any new potential biological features were present on the site that were not originally addressed in the 2004 Draft Environmental Impact Report (DEIR) and associated mitigation measures. This memo is based on our on-going discussions about the proposed Alves Ranch Project, as well as LSA's prior work on the property on a continuous basis since 2002.

### Methods:

Prior to conducting the site visit, all of the project files were reviewed related to the Vista Del Mar development project, which included lands south of West Leland Road where the proposed Alves Ranch Project will be built. Specifically, permits were obtained to grade the Alves Ranch Project area and construct a water quality detention basin in 2004-2005. The California Natural Diversity Database (CNDDDB) was also reviewed for records of any special-status species occurrences in the project vicinity since LSA's original biological assessment in 2002. Finally, aerial imagery from Google Earth was examined to look for any signs of ponding on the site since the project area was graded.

On June 12, 2018, I conducted a site visit that involved walking transects (approximately 100 feet apart) across the level portion of the project area to search for any new biological resources, such as wetlands or habitats for special-status species. I also walked down to the bottom of the water quality detention basin via maintenance roads to inspect the conditions and outfall structures.

## Results:

Presented below is a summary of my observations during the site visit:

- Other than the constructed water quality detention basin adjacent to Highway 4, a majority of the site was level as a result of the grading activities in 2004-2005.
- The property has been maintained since the grading activities in 2004-2005. The level portions of the site had been recently disced and appeared to have been planted with wild oats, which is the dominate vegetation type on most of the site. There are a few coyote brush shrubs scattered throughout the site.
- The level portions of the site had several constructed drainage ditches that went to drop inlets as part of the water quality detention basin system that was constructed in 2004-2005; the ditches were dry and were dominated by upland vegetation.
- Based on the Corps of Engineers approved wetland delineation from 2001, the Alves Ranch Project area had a single ephemeral drainage approximately 200 feet long in the center of the site. The feature, which was filled in 2004-2005, was not observed during the course of the 2018 site visit. All of the permit conditions associated with the authorization to fill the ephemeral drainage have been satisfied.
- The bottom of the water quality detention basin is dominated by cattails (*Typha* sp.) and non-native common reed (*Phragmites australis*). At the time of the site visit, the bottom of the basin was dry and no standing water was observed.
- The water quality detention basin has been maintained since it was constructed in 2004-2005, consisting of periodic vegetation control and debris removal from the trash racks. As recently as 2012, additional modifications were made to the water control structures and the basin was also re-graded.

## Conclusions:

In summary, no new biological resources are present on the proposed Alves Ranch Project site based on my site visit, and nothing about the proposed Project would trigger any new significant impacts or increase the severity of significant impacts previously identified in the 2004 EIR. Therefore, the applicable biological resource mitigation measures in the DEIR, including, without limitation, a pre-construction survey to search for active native bird nests, should be imposed on the construction of the proposed Alves Ranch Project, which would ensure that all identified biological resource impacts are adequately mitigated.

Please do not hesitate to contact me if you have questions and/or require further information regarding this assessment.

RE: Alves Ranch Development, Honker Bay, Contra Costa County

Dear Mr. DePietro:

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results. **Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE.**

I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. **By contacting all those on the list, your organization will be better able to respond to claims of failure to consult.** If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact via email: [sharaya.souza@nahc.ca.gov](mailto:sharaya.souza@nahc.ca.gov).

Sincerely,

A handwritten signature in blue ink, appearing to read "Sharaya Souza".

Walnut Creek, CA 94597

**Re: Paleontological Records Search: Alves Ranch Project (3746.0002), Contra Costa County, California**

Dear Dr. DePietro:

As per the request of Spencer Pignotti, I have performed a records search on the University of California Museum of Paleontology (UCMP) database for the Alves Ranch project in Contra Costa County. The project site is southeast of Shore Acres, east of San Marco Boulevard and west of Bailey Road, between California Delta Highway and West Leland Road. Its PRS location is Sec. 15, T2N, R1W, Honker Bay quadrangle (USGS 7.5-series topographic map). On Google Earth imagery, it appears that this is relatively flat, sparsely vegetated terrain that has been disturbed by previous agricultural use.

### Geologic Units

According to the part of the geologic map by Dibblee (1980) shown here, the Alves Ranch project site (red outline at center) and surrounding half-mile area (dashed black outline) are located mostly on nonmarine sedimentary and volcanic rocks of Pliocene age, locally referred to as the Tehama Formation. Pleistocene alluvium is north-adjacent to the site and both units are bisected by Holocene alluvium (Qa). Holocene deposits are too young to contain fossils, whereas the Pleistocene and Pliocene units have the potential of yielding significant paleontological resources.

### Key to mapped units

- Qa** Surficial alluvium (Holocene)
- Qoa** Older alluvium (Pleistocene)
- Tps** Nonmarine sedimentary and volcanic rocks: weakly indurated clay, sand and pebble gravel; locally called the Tehama Formation (Pliocene) clay shale and siltstone, massive to vaguely bedded (middle to late Miocene)
- Tlt** Lawler Tuff: pumiceous tuff breccia (Pliocene)

### **Records Search**

The paleontological record search for the Alves Ranch project was performed on the University of California Museum of Paleontology (UCMP) database. The results are 9928 vertebrates from 64 Pleistocene and 1267 vertebrates from 12 Pliocene localities in Contra Costa County. The nearest vertebrate locality is V90070 (Lawler Ravine), in the Pliocene Wolfskill Formation (Blancan NALMS), just east of the half-mile search area at the southwest corner of the intersection of Leland and Bailey roads; no specimens are recorded for it in the database.

### **Remarks and Recommendations**

The Alves Ranch project site will impact Pliocene nonmarine deposits similar to those in Contra Costa County that have yielded a very rich vertebrate paleofauna. A pre-construction paleontological walkover survey of the site would be unwarranted because its surface is disturbed. However, I recommend paleontological monitoring of all project-related excavations of previously undisturbed deposits because the Pliocene deposits that dominate the site are highly sensitive for significant paleontological resources. Should any vertebrate remains (e.g., bones, teeth) be encountered, all construction-related activities should be diverted from the find until a professional paleontologist has properly recorded and evaluated it, and, if deemed appropriate, salvaged it in a timely manner. Recovered fossils should be deposited in an appropriate repository, such as the UCMP, where they will be properly curated and made available for scientific research and education.

Sincerely,

Ms. Mandy Leung  
William Lyon Homes, Inc.  
4000 Executive Parkway, Suite 250  
San Ramon, CA 94583

Re: Geological and Geotechnical Information for EIR  
Alves Ranch, Pittsburg, California  
*SFB Project No.: 241-25*

Ms. Leung:

In accordance with your request, Stevens, Ferrone & Bailey Engineering Company, Inc. (SFB) is providing the following information that can be used to supplement the EIR for the Alves Ranch project in Pittsburg, California.

## **1.0 Project Description**

Based on the information provided by Mr. Scott Hilk of William Lyon Homes, it is our understanding that the project will consist of developing approximately 26 acres into four residential neighborhoods consisting of duet and single-family structures, a recreation area, and associated infrastructure such as underground utilities, asphalt concrete roadways, parks, and storm water remediation facilities. In addition, a commercial development encompassing approximately 12 acres in area is planned. The site was previously mass graded as a part of the larger Vista Del Mar residential development to the south under the guidance of Berlogar Geotechnical Consultants (BGC); the mass grading occurred between the summer of 2005 and the summer of 2006. Additional grading will be performed, including grading for the proposed commercial area, in order to achieve planned grades.

## **2.0 Surface Description**

The site is bounded by West Leland Road on the south, Highway 4 on the north, a residential development and eastern facing slope on the west, and vacant land including a westerly facing slope on the east. The site has been previously mass graded relatively level except for ascending slopes on the east and west sides of the site, and descending slopes (along with a large detention basin) on the north side of the site. Concrete lined surface water collection ditches are located along the toe

of the slopes as well as on the detention basin slopes. The site is covered with a thick growth of grasses and weeds.

### 3.0 Previous Mass Grading and Subsurface Conditions

According to BGC, mass grading occurred at the site between the summer of 2005 and the summer of 2006 under the continuous guidance of BGC. BGC states that the site was essentially graded flat, with cut and fill slopes located along the northern, western, and eastern sides of the site; unsuitable underlying materials, such as loose native soils and undocumented fills, were removed prior to placing compacted, engineered fill. BGC summarized the results of the mass grading work in their August 14, 2008 report<sup>1</sup>.

BGC describes in their February 2008 report<sup>2</sup> that remedial grading was performed in areas underlain by existing fill and included removal of soft sediments along the centerline of drainage courses, removal of expansive soils along cut/fill transitions, and excavation of keyways for buttress fill slopes for the detention basin. BGC further states that (1) the ground surface below the engineered fill at the site was properly prepared with engineering control including scarification and moisture conditioning, (2) subdrains were installed along the back edge of keyways and excavation backcuts as well as along the centerline of previous drainages, and (3) subdrains were generally stopped at a depth of at least 10 feet below the existing sheet grade.

As a result of the previous mass grading, BGC in their February 2008 provides the following information:

**Engineered Fill:** Engineered fill has been extensively placed at the site. The engineered fill was largely derived from cuts performed in the Tulare bedrock formation and consists of layers of silty to sandy clays with variable amounts of gravel. The fill was placed under the observation of BGC with engineering control and testing. The engineered fill is suitable for proposed construction. Laboratory testing of bulk samples indicate that fill has Plasticity Indices between 18 and 23 and the fill is considered moderately expansive.

**Alluvium:** Alluvium underlies the engineered fill in two locations, a former north trending drainage course in the central portion of the site (underlying the detention basin) and a northeast trending band along the former drainage course. The soft sediments along the centerline of these areas were removed down to competent materials during the remedial grading of the site.

---

<sup>1</sup> BGC, 2008, report titled *Soil Engineering Services During Mass Grading, Vista Del Mar – Subdivision, Pittsburg, California*, dated August 14, 2008.

<sup>2</sup> BGC, 2008, report titled *Preliminary Geotechnical Investigation, Alves Ranch, West Leland Road, Pittsburg, California*, dated February 25, 2008.

**Bedrock:** Bedrock units at the site are composed of non-marine sedimentary deposits of the Pliocene age Tulare formation. The Tulare formation at the site consists of friable to weak beds of sandy to silty claystone, sandy siltstone, sandstone, and conglomerate. After the mass grading was completed, the bedrock is exposed at the surface of the site in a few areas. Bedrock structure at the site was mapped during the previous grading and was found generally dipping between 5 and 25 degrees to the north and northeast (*we noted that on Plate 3 of the February 2008 BGC report in the northeast portion of the site, BGC shows bedrock bedding dipping 9 to 14 degrees south and southwest*). Claystone beds within the Tulare formation are considered highly expansive.

**Groundwater:** Groundwater at the site has been partially controlled by the addition of a subdrain system constructed below the engineered fill. Groundwater was not encountered during the remedial over-excavations performed during the previous mass grading in 2005-2006 with the exception of minor areas of seepage near the existing detention basin; subdrains were installed to intercept the seepage.

**Exploratory Well:** An exploratory well was drilled at the site during the 1960's in the southeast portion of the site. During mass grading, a column of clean grout was encountered in the area of the abandoned well. The abandoned well casing was surveyed in the field during mass grading and was cut down to an elevation of 171.6 feet (about 16-1/2 feet below the sheet grade at that time).

According to BGC and as presented in their August 14, 2008 report, the fill materials placed at the site were compacted to the following specifications.

| Location                                    | Clayey Soils and Tps Bedrock Unit                                                                       | Sandy Soils and Bedrock Units Other Than Tps                                                      |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| Within 15 feet of finished grade            | Between 85 and 90 percent relative compaction at not less than 5 percent above optimum moisture content | At least 90 percent relative compaction at not less than 3 percent above optimum moisture content |
| Between 15 and 30 feet below finished grade | At least 90 percent relative compaction at not less than 5 percent above optimum moisture content       | At least 90 percent relative compaction at not less than 3 percent above optimum moisture content |
| Greater than 30 feet below finished grade   | At least 95 percent relative compaction at not less than 3 percent above optimum moisture content       |                                                                                                   |

BGC also performed geotechnical observations and testing during the construction of the north embankment of the existing detention basin. According to BGC, the areas to be graded were cleared of old fill materials, the subgrade was scarified and re-compacted, and new fill was placed and compacted to an average relative compaction of at least 95 percent with no compaction tests

less than 93 percent. The results of BGC's observation and testing work for the detention basin's north slope are summarized in their 2007 report<sup>3</sup>.

#### **4.0 Geology, Faulting, and Seismicity**

Graymer, et al<sup>4</sup>, has mapped the bedrock underlying the site as being part of the Tulare Formation, poorly consolidated non-marine sedimentary rock of Pliocene age, consisting of gray to maroon siltstone, sandstone, and conglomerate, and contains tuff layers.

The project site is located in the San Francisco Bay Area that is considered one of the most seismically active regions in the United States. Significant earthquakes have occurred in the San Francisco Bay Area and are believed to be associated with crustal movements along a system of sub-parallel fault zones that generally trend in a northwesterly direction. The site is not located within an Alquist-Priolo Earthquake Fault Zone as designated by the State of California<sup>5</sup>.

Earthquake intensities will vary throughout the San Francisco Bay Area, depending upon numerous factors including the magnitude of earthquake, the distance of the site from the causative fault, and the type of materials underlying the site. The U.S. Geological Survey (2016)<sup>6</sup> indicated that there is a 72 percent chance of at least one magnitude 6.7 or greater earthquake striking the San Francisco Bay region between 2014 and 2043. Therefore, the site will probably be subjected to at least one moderate to severe earthquake that will cause strong ground shaking.

According to the U.S. Geological Survey's Unified Hazard Tool and applying the Dynamic: Conterminous U.S. 2008 (v3.3.1) model (accessed 6/1/2018), the resulting deaggregation calculations indicate that the site has a 10% probability of exceeding a peak ground acceleration of about 0.47g in 50 years (design basis ground motion based on very dense soil – soft rock site condition; mean return time of 475 years). The actual ground surface acceleration might vary depending upon the local seismic characteristics of the underlying bedrock and the overlying unconsolidated soils.

#### **5.0 Liquefaction**

Soil liquefaction is a phenomenon primarily associated with saturated, cohesionless, soil layers located close to the ground surface. These soils lose strength during cyclic loading, such as

---

<sup>3</sup> BGC, 2007, report titled *Soils Engineering Services During Construction, North Embankment of Detention Basin, Vista Del Mar, West Leland Road, Pittsburg, California*, dated March 5, 2007.

<sup>4</sup> Graymer, et al, 1994, *Preliminary Geologic Map Emphasizing Bedrock Formations in Contra Costa County, California*, U.S. Geological Survey OFR 94-622.

<sup>5</sup> Hart and Bryant, *Fault-Rupture Hazard Zones in California*, CDMG Special Publication 42, Interim Revision 2007.

<sup>6</sup> Aagaard, Blair, Boatwright, Garcia, Harris, Michael, Schwartz, and DiLeo, *Earthquake Outlook for the San Francisco Bay Region 2014–2043*, USGS Fact Sheet 2016–3020, Revised August 2016 (ver. 1.1).

imposed by earthquakes. During the loss of strength, the soil acquires mobility sufficient to permit both horizontal and vertical movements. Soils that are most susceptible to liquefaction are clean, loose, uniformly graded, saturated, fine-grained sands that lie close to the ground surface. According to ABAG and the U.S. Geological Survey, the site is located in an area that has been characterized as having very low liquefaction susceptibility<sup>7,8</sup>. As of the date of this report, the liquefaction potential of the site has not been evaluated by the State of California<sup>9</sup>.

Based on our review of available literature and the results of exploratory borings at the site, it is our opinion that the potential for ground surface damage caused by liquefaction at the site is low.

## **6.0 Landsliding**

According to U.S. Geological Survey Open-File Report 97-745 (landslide folio of the San Francisco Bay Area), the development site area is not mapped as having previously identified landslides or earthflows nor is it located within an area having debris flow source potential. According to the Association of Bay Area Governments Resilience Program website (accessed 6/1/2018), portions of the site have been mapped as having “few” landslides prior to the mass grading that was performed in 2005-2006.

Since the previous mass grading performed at the site removed weak soils and old fills, and grades were raised to create a relatively level site, it is our opinion that the potential for landslides developing at the site are low.

Sincerely,

## PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Mr. Roylance:

ENGEO is pleased to present our phase I environmental site assessment of the subject property (Property), located in Pittsburg, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings, opinions, and conclusions regarding the Property.

ENGEO has the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Property, and has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 and the American Standard Testing Method (ASTM) Practice E1527-13. We declare that, to the best of our professional knowledge and belief, the responsible charge for this study meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and ASTM E1527-13.

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Sincerely,

ENGEO Incorporated

## EXECUTIVE SUMMARY

ENGEO conducted a phase I environmental site assessment for the property located at Alves Ranch Road and West Leland Road in Pittsburg, California (Property). The Property is approximately 47.42 acres in area and is identified by Assessor's Parcel Number (APN) 097-700-002-5.

The Property is currently a vacant "sheet-graded" pad located south of the California Delta Highway (State Highway 4). Review of historical records indicates that the Property has remained undeveloped land since at least 1937. One aerial photograph showed that a single residential structure was located on the Property from 2006 to no later than 2008. An unpaved road bisecting the Property north to south is visible in aerial photographs dating back to 1937.

The study included a review of local, state and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources; a reconnaissance of the Property to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially hazardous materials; and interview with persons knowledgeable about current and past site use.

The site reconnaissance and records review did not find documentation or physical evidence of soil or groundwater impairments associated with the use of the Property. A review of regulatory databases maintained by county, state, and federal agencies found no documentation of hazardous materials violations or discharge on the Property. A review of regulatory agency records and available databases did not identify contaminated facilities within the appropriate ASTM search distances that would be expected to impact the Property.

Based on the findings of this assessment, no Recognized Environmental Conditions (RECs) and no historical RECs were identified for the Property.

Based on the review of regulatory databases and site reconnaissance, we have identified a controlled REC (CREC):

- Petroleum hydrocarbon impacted soils were removed from an area south of the Property and encapsulated below the road section at the intersection of West Leland Road and Alves Ranch Road. Although encapsulated adjacent to the Property, given the depth of encapsulation (greater than 30 feet below ground surface), the presence of this material is not considered to pose an environmental concern for residential development of the Property.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312). This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the Property.

ENGEO recommends no further environmental studies at this time.

## 1.0 INTRODUCTION

### 1.1 SITE LOCATION AND DESCRIPTION

ENGEO conducted a phase I environmental site assessment for the Property located at Alves Ranch Road in Pittsburg, California (Figure 1). The approximately 47.42-acre Property is identified as APN 097-700-002-5 (Figure 3) and is currently occupied by undeveloped land.

### 1.2 CURRENT USE OF PROPERTY AND ADJOINING PROPERTIES

The Property is currently a vacant “sheet-graded” pad located south of the California Delta Highway (State Highway 4). The Property has a mounded slope extending north to south near the intersection of Woodhill Drive and West Leland Road.

The surrounding sites include mainly residential developments. The Pittsburg/Bay Point BART station is located to the east of the Property.

### 1.3 SITE AND VICINITY CHARACTERISTICS

According to published topographic maps, the Property ranges in elevation from approximately 150 feet above mean sea level (msl) to approximately 223 feet above msl. Review of the Vine Hill & Honker Bay quadrangles Geologic Map found that the Property is underlain by alluvial pebble gravel, sand, and clay of valley areas and pebble conglomerate, sandstone, and claystone (Dibblee et al., 2006).

Geocheck – Physical Setting Source Summary of the Environmental Resources Data report (Appendix A) indicated no Federal United States Geological Survey (USGS) wells located within 1 mile of the Property. Groundwater in the vicinity of Property was historically observed between 27.7 feet and 72.9 feet below the ground surface, however, the topography of the region is highly variable. The Physical Setting Source Summary did not provide hydrogeologic information for use as an indicator of groundwater flow direction in the immediate area. However, information gathered from nearby sites to the north indicates the groundwater flow direction was observed to the northeast to northwest and the depth to groundwater is approximately 4 feet.

We reviewed the Department of Water Resources On-line Water Data Library for depth to water in the vicinity of the Property. The website did not identify any wells within 1 mile of the Property.

We reviewed EnviroStor, a website maintained by the State of California Department of Toxic Substances Control, and GeoTracker, a website maintained by the State of California Water Resources Control Board, for nearby facilities with records that include depth to groundwater measurements. The following information was obtained regarding local groundwater conditions.

**TABLE 1.3-1: Local Groundwater Conditions**

| PROXIMITY TO PROPERTY | REPORTED DEPTH TO GROUNDWATER | REPORTED GROUNDWATER FLOW DIRECTION |
|-----------------------|-------------------------------|-------------------------------------|
| 2,800 ft              | 20.88 (max)                   | E                                   |
| 2,900                 | 73.45 (max)                   | N                                   |
| 4,100                 | 59.14 (max)                   | NW                                  |

The site-specific depth to groundwater and direction of groundwater flow was not determined as part of this assessment. Fluctuations in groundwater levels may occur seasonally and over a period of years due to variations in precipitation, temperature, irrigation and other factors. Resources identified during the investigation showed that the groundwater gradient flows to the north toward Suisun Bay.

We reviewed the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) website and map database to determine if any historic oil and/or gas wells were located within the Property. One well was mapped within the Property. The onsite well (API#01300200) is listed as a dry hole, plugged well (plugged 9/12/1964), previously operated by Trico Industries, Inc. Three other wells were mapped within 1 mile of the Property. Two of them are listed as plugged and the other one is listed as a dry hole, plugged well.

#### **1.4 PURPOSE OF PHASE I ENVIRONMENTAL SITE ASSESSMENT**

This assessment was performed at the request of William Lyon Homes, Inc. for the purpose of environmental due diligence during property acquisition. The objective of this phase I environmental site assessment is to identify Recognized Environmental Conditions (RECs) associated with the Property. As defined in the ASTM Standard Practice E1527-13, an REC is “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

#### **1.5 DETAILED SCOPE OF SERVICES**

The scope of services performed included the following:

- A review of previous environmental reports.
- A review of publicly available and practically reviewable standard local, state, tribal, and federal environmental record sources.
- A review of publicly available and practically reviewable standard historical sources, aerial photographs, fire insurance maps and physical setting sources.
- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production or disposal of hazardous or potentially hazardous materials.
- Interviews with owners/occupants and public sector officials.
- Preparation of this report with our findings, opinions, and conclusions.

#### **1.6 SIGNIFICANT ASSUMPTIONS OR DEVIATIONS FROM ASTM STANDARD PRACTICE**

No significant assumptions or deviations were identified during this assessment.

## **1.7 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT**

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services. The findings of the report are based in part on contracted database research, out-of-house reports and personal communications. The opinions formed by ENGEO are based on the assumed accuracy of the relied upon data in conjunction with our relevant professional experience related to such data interpretation. ENGEO assumes no liability for the validity of the materials relied upon in the preparation of this report.

This document must not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are valid for one year after completion of the report. Updates of portions of the assessment may be necessary after a period of 180 days after completion.

This phase I environmental site assessment is not intended to represent a complete soil or groundwater characterization, nor define the depth or extent of soil or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. A more extensive assessment that would include a subsurface exploration with laboratory testing of soil and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities. ENGEO can also not be held responsible from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

## **1.8 SPECIAL TERMS AND CONDITIONS**

ENGEO has prepared this report for the exclusive use of our client, William Lyon Homes, Inc. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the client.

Laboratory testing of soil or groundwater samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for polychlorinated biphenyls (PCBs), a radon evaluation, or a mold survey.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's assessment. Visual observations referenced in this report are intended only to represent conditions at the time of the reconnaissance. ENGEO would not be aware of site contamination, such as dumping and/or accidental spillage, that occurred subsequent to the reconnaissance conducted by ENGEO personnel.

## 2.0 RECORDS REVIEW

### 2.1 PROPERTY RECORDS

#### 2.1.1 Title Report/Ownership

The Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. Laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources.

A Preliminary Title Report for the Property, prepared by First American Title Company and dated September 28, 2017, was provided for our review. The Property title is vested in ALVES RANCH, LLC, A CALIFORNIA LIMITED LIABILITY COMPANY. No references to environmental liens, deed restrictions or other potential environmental issues were noted. This report is included in Appendix D.

### 2.2 PREVIOUS ENVIRONMENTAL REPORTS

ENGEO, Phase I Environmental Site Assessment, Alves Property, West Leland Road, Pittsburg, California, March 9, 2001. Project #3328.1.051.01

ENGEO completed a Phase I ESA that included a portion of the Property on March 9, 2001. The ESA determined that some hazardous compounds were being stored in containers on portions of the 320-acre site. These chemicals were being stored was located south of the subject Property. Environmental sampling of these areas was recommended.

ENGEO, Phase II Environmental Site Assessment, Alves Ranch, West Leland Road, Pittsburg, California, June 13, 2003. Project #3328.1.056.01

ENGEO completed a phase II ESA in June 2003 for a site south of the Property. This investigation was initiated based off the recommendations from the phase I ESA completed in March 2001. The site was located just south of West Leland Road, with the subject Property being located north. Soils at the site were found to have petroleum contamination, and it was recommended for soil to be excavated and encapsulated in the West Leland Road right-of-way. Lead and asbestos-containing materials were identified as well during a survey.

ENGEO, Environmental Services Associated with Former Underground Storage Tanks, Vista Del Mar, Pittsburg, California, December 27, 2005. Project #3328.1.060.01

ENGEO observed excavation activities in the vicinity of former USTs, previously removed in 1994. Documentation including applications, inspections, and removal permits for the three USTs were received and reviewed by ENGEO personnel (see Section 2.5 of this report). ENGEO also completed confirmation sampling of the excavation area to ensure all impacted materials were removed.

The report states that the approximately 2,800 cubic yards of hydrocarbon-impacted soils were placed in a street section of West Leland Road extension, with approval from the Contra Costa County Department of Environmental Health. The soil cross section shows that the material was

buried at a depth of a least 33 feet below the current grade. Given the depth of encapsulation and based on a review of the June 2003 phase II ESA, soil concentrations within the excavated material would not be expected to pose a risk to human health or environmental health. Therefore, the encapsulated soils do not pose a health risk to the planned development at the subject Property.

ENGEO, Debris-Fill Assessment, Alves Ranch, Pittsburg, California, December 8, 2003. Project #3328.1.058.01

ENGEO completed a debris-fill assessment in December of 2003. The scope of work included the excavation of 18 test pits, soil screening and logging, recovery of soil samples, and laboratory analyses. Approximately 8,600 cubic yards of refuse-laden soil were identified in the center of the Property. An estimated 1,700 cubic yards of refuse were recommended to be excavated and disposed of offsite. Sampling results exhibited concentrations below regulatory threshold values. ENGEO recommended the material be excavated and encapsulated under the West Leland Road section.

ENGEO, Demolition and Excavation Observation Report, Vista Del Mar, Pittsburg, California, January 17, 2006. Project #3328.1.060.01

ENGEO performed observation and sampling services during excavation of debris-filled material at the Property. The material was identified in the Debris-Filled Assessment performed by ENGEO in December 2003 (summarized above). All material larger than 3 inches in diameter were removed from the debris-fill area. Removed fill was encapsulated under street sections at a depth of over 40 feet below ground surface. ENGEO collected samples, which resulted in no detections over environmental screening levels.

## 2.3 HISTORICAL RECORD SOURCES

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding area in order to identify those uses or occupancies that are likely to have led to recognized environmental conditions on the Property.

### 2.3.1 Historical Topographic Maps

Historical USGS topographic maps were reviewed to determine if discernible changes in topography or improvements pertaining to the Property had been recorded. The following maps were provided to us through an EDR Historical Topographic Map Report, presented in Appendix C.

**TABLE 2.3.1-1: Historical Topographic Maps**

| QUAD               | YEAR                               | DESCRIPTION                                                                                                                                                                                                                  |
|--------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Honker Bay/Clayton | 2012                               | <u>Property:</u> No changes were noted from the 1907 map.<br><u>Adjoining:</u> The area north and south of the Property are shown as developed with residential and commercial areas. The harbor has been developed as well. |
| Clayton/Honker Bay | 1994, 1997/<br>1980/ 1973/<br>1968 | <u>Property:</u> No changes were noted from the 1907 maps.<br><u>Adjoining:</u> The area north of the highway continues to show development, with added neighborhoods, harbor areas, and West Pittsburg is shown.            |

| QUAD               | YEAR               | DESCRIPTION                                                                                                                                                                                                                                                                                                                    |
|--------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Clayton/Honker Bay | 1953               | <u>Property:</u> No changes were noted from the 1907 map.<br><u>Adjoining:</u> The surrounding area has shown much development, with the California Delta Highway being built along the northern border of the Property. | Antioch            | 1907               | <u>Property:</u> The Property is undeveloped, except for one road that bisects it north to south.<br><u>Adjoining:</u> The surrounding areas are mostly undeveloped with a few roads and small structures. A railroad line is located north of the Property, along Honker Bay.                                                 |

### 2.3.2 Aerial Photographs

The following aerial photographs, provided by EDR, were reviewed for information regarding past conditions and land use at the Property and in the immediate vicinity. These photographs are presented in Appendix E.

**TABLE 2.3.2-1: Aerial Photographs**

| YEAR                               | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2012/ 2010/<br>2009                | <u>Property:</u> The Property no longer has material storage, and the swale/berm area appears to be completely developed.<br><u>Adjoining:</u> The majority of the areas directly south of the Property have developed, with residential developments.                                                                                                                                                                                     |
| 2006                               | <u>Property:</u> The Property appears to have been graded, and various materials appear to have been stored on the Property. One structure appears to have been built near the center of the southern property boundary.<br><u>Adjoining:</u> The area directly south of the Property has been graded, with some paved roads being built. A large swale/berm appears to be constructed in the northern area at the center of the Property. |
| 2005                               | <u>Property:</u> No changes were noted from the 1937 photograph.<br><u>Adjoining:</u> The areas to the southeast of the Property have developed with residential developments.                                                                                                                                                                                                                                                             |
| 1998/ 1993                         | <u>Property:</u> No changes were noted from the 1937 photograph.<br><u>Adjoining:</u> The areas to the southwest of the Property have developed with residential developments.                                                                                                                                                                                                                                                             |
| 1984/ 1979/<br>1966/ 1963/<br>1958 | <u>Property:</u> No changes were noted from the 1937 photograph.<br><u>Adjoining:</u> The areas north of the Property have been developed with residential neighborhoods. The California Delta Highway was constructed along the northern border of the Property.                                                                                                                                                                          |
| 1939/ 1937                         | <u>Property:</u> The Property is undeveloped, except for one road that bisects it north to south.<br><u>Adjoining:</u> The surrounding areas are mostly undeveloped with a few roads and small structures. There is a sparsely developed residential area north of the Property.                                                                                                                                                           |

### 2.3.3 Fire Insurance Maps

EDR prepared a Sanborn Fire insurance map search for the Property and surrounding properties. EDR reported that no maps were available for the Property and surrounding properties.

### 2.3.4 City Directory

City Directories, published since the 18th century for major towns and cities, lists the name of the resident or business associated with each address. As no physical address was available for the Property, no results can be cross-referenced with the directory. The listings are primarily associated with residential uses, with some various businesses. The directory shows results for Alves Ranch Road and West Leland Road. A city directory search conducted by EDR is located in Appendix F.

## 2.4 ENVIRONMENTAL RECORD SOURCES

EDR performed a search of federal, tribal, state, and local databases regarding the Property and nearby properties. Details regarding the databases searched by EDR are provided in Appendix A. A list of the facilities documented by EDR within the approximate minimum search distance of the Property is provided below.

### 2.4.1 Standard Environmental Records

#### 2.4.1.1 Subject Property

The following database(s) include(s) facilities listed within the appropriate ASTM search distances of the Property on Standard Environmental Records source databases.

**TABLE 2.4.1.1-1**

| FACILITY                         | STREET                            | DATABASE(S) |
|----------------------------------|-----------------------------------|-------------|
| Alves Ranch 11- Acre School Site | West Leland And Alves Ranch Roads | ENVIROSTOR  |

#### 2.4.1.2 Other Properties

The following database(s) include(s) facilities listed within the appropriate ASTM search distances of the Property on Standard Environmental Records sources.

**TABLE 2.4.1.2-1**

| FACILITY                              | STREET                   | DATABASE(S)                                                              |
|---------------------------------------|--------------------------|--------------------------------------------------------------------------|

Based on the distances to the identified database sites, regional topographic gradient, and the EDR findings, it is unlikely that the above-stated database sites pose an environmental risk to the Property. The majority of the properties that are on the “Orphan Summary” list appear to be located beyond the ASTM recommended radius search criteria. Orphan Summary sites were reviewed and determined to likely pose no environmental risk to the Property.

## 2.5 REGULATORY AGENCY FILES AND RECORDS

The following agencies were contacted pertaining to possible past development and/or activity at the Property.

**TABLE 2.5-1: Regulatory Agency Records**

| NAME OF AGENCY                                                                        | RECORDS REVIEWED                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| City of Pittsburg Code Enforcement                                                    | The City of Pittsburg Code Enforcement Department did not identify records for the Property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| City of Pittsburg Fire District                                                       | The City of Pittsburg Fire District referred us to the Contra Costa County Fire Department.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| City of Pittsburg Engineering                                                         | The City of Pittsburg Engineering Department did not have internal records but did refer us to the DTSC online resources.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Contra Costa County Department of Conservation & Development                          | The Contra Costa County Department of Conservation & Development did not identify records for the Property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Contra Costa County Health Services Department                                        | ENGEO reviewed two permit applications for well destruction of a well at a site near the subject Property. No files were available for the Property.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Contra Costa County Health Services – Hazardous Materials Program (Env. Health Dept.) | The Department of Environmental Health forwarded our records request to the Hazardous Materials Program. They provided applications, inspections, and removal permits for the three former USTs that were removed in 1994. The tank volumes were 2,000 (regular), 3,000 (unleaded), and 10,000 (diesel) gallons, respectively. Unauthorized release reports and tank closure reports were also received and reviewed. A site closure letter was also received for the Property, dated July 21, 1997. It stated that the CCCHSD will not require any additional work at the site. |
| Contra Costa County Fire Protection District                                          | We did not receive a response form the Contra Costa County Fire Protection District by the time of the completion of this report.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Contra Costa County Assessor's Office                                                 | The Contra Costa County Assessor's Office website was accessed and the APN (097-700-002-5) was confirmed for the Property.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| California State Water Resources Control Board                                        | GeoTracker, the State Water Resources Control Board website, was accessed and files related to environmental histories were reviewed. All of the cases reviewed within one mile of the Property were determined to likely not pose an environmental risk to the planned development.                                                                                                                                                                                                                                                                                             |
| Department of Toxic Substances Control                                                | EnviroStor, the DTSC website, was accessed and files related to environmental histories were reviewed. All of the cases reviewed within one mile of the Property were determined to likely not pose an environmental risk to the planned development.                                                                                                                                                                                                                                                                                                                            |

## 3.0 SITE RECONNAISSANCE

### 3.1 METHODOLOGY

ENGEO conducted a reconnaissance of the Property on November 20, 2017. The reconnaissance was performed by Stephen Fallon, a Project Engineer of ENGEO. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential sources of soil or groundwater contamination. The Property was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks. Photographs taken during the site reconnaissance are presented in Figures 4A through 4C.

### 3.2 GENERAL SITE SETTING

The Property is an undeveloped lot with a large drainage swale area near the northern central portion of the Property. We observed fences and drainage canals along the Property boundary. One paved asphalt area was observed near the main entrance gate.

### 3.3 EXTERIOR OBSERVATIONS

The following table summarizes our observations during the reconnaissance:

**TABLE 3.3-1: Exterior Site Observations**

| FEATURE TYPE                                           | OBSERVATIONS                                                                                                                     |
|--------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Structures                                             | We did not observe structures at the time of our reconnaissance.                                                                 |
| Hazardous Substances and Petroleum Products/Containers | No hazardous substances were identified during our reconnaissance.                                                               |
| Storage Tanks (underground and above-ground)           | No USTs or ASTs were identified during our reconnaissance.                                                                       |
| Odors                                                  | No odors were identified during our reconnaissance.                                                                              |
| Pools of Potentially Hazardous Liquid                  | No pools of any liquid were identified during our reconnaissance.                                                                |
| Drums                                                  | No drums were identified during our reconnaissance.                                                                              |
| Polychlorinated Biphenyls (PCBs)                       | No PCB containing appurtenances, such as transformers, were identified during our reconnaissance.                                |
| Pits, Ponds, and Lagoons                               | A large drainage swale exists to the north of the Property, which is fed stormwater via drainage canals.                         |
| Stained Soil/Pavement                                  | No staining was identified during our reconnaissance.                                                                            |
| Stressed Vegetation                                    | No stressed vegetation was identified during our reconnaissance.                                                                 |
| Solid Waste/Debris                                     | Various inert trash was observed, but no large-scale debris was observed during our reconnaissance.                              |
| Stockpiles/Fill Material                               | No stockpiles or fill material were identified during our reconnaissance.                                                        |
| Wastewater                                             | Other than the drainage swales described above, no wastewater conveyance systems were identified during our site reconnaissance. |
| Wells                                                  | No evidence of wells was identified during our reconnaissance.                                                                   |
| Septic Systems                                         | No evidence of septic systems was identified during our reconnaissance.                                                          |

### 3.4 ASBESTOS-CONTAINING MATERIALS AND LEAD-BASED PAINT

An asbestos and lead-based paint survey was not conducted as part of this assessment. No structures are currently located on the Property.

### 3.5 INDOOR AIR QUALITY

An evaluation of indoor air quality, mold, or radon was not included as part of the contracted scope of services. The California Department of Health Services has conducted studies of radon risks throughout the state, sorted by zip code. Results of the studies indicate that 34 tests were conducted within the Property zip code, with 2 tests exceeding the current EPA action level of 4 picocuries per liter {pCi/L}<sup>1</sup>).

In accordance with ASTM E2600-10 (Tier 1) (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*); There are no potential petroleum hydrocarbon sources for vapor intrusion within 1/10 mile of the Property or volatile organic compound (VOCs) sources within 1/3 mile of the Property.

As mentioned in Section 2.2, soil impacted with petroleum hydrocarbons was encapsulated under the road at the intersection of West Leland Road and Alves Ranch Road. The material was buried at an approximate depth of greater than 30 feet below the road with approval of Contra Costa Department of Environmental Health. Given the reported petroleum hydrocarbon concentrations and the vertical/lateral distance from the encapsulation area to the study area, this is not considered to pose an environmental concern or a vapor intrusion concern.

### 4.0 INTERVIEWS

Completed Key Site Manager and client environmental site assessment questionnaires pertaining to applicable past and present uses and physical characteristics of the Property and surrounding properties were not received at the time of the completion of this report.

### 5.0 EVALUATION

#### 5.1 OPINIONS AND DATA GAPS

The following data gaps were identified during the environmental investigation:

- ENGEO did not receive the Key Site Manager or client ESA questionnaire at the time of the completion of this report.
- The Contra Costa County Fire Protection District did not respond as of the completion of this report.

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional

1

California Department of Public Health – Radon Program  
(<https://www.cdph.ca.gov/Programs/CEH/DRSEM/CDPH%20Document%20Library/EMB/Radon/Radon%20Test%20Results.pdf>).

appropriate investigation is required to identify the presence or likely presence of a REC. The data gaps identified during this process do not affect the conclusions as to the presence or lack of presence of RECs at the Property.

## 5.2 FINDINGS AND CONCLUSIONS

The study included a review of local, state and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources; a reconnaissance of the Property to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially hazardous materials; and interview with persons knowledgeable about current and past site use.

The site reconnaissance and records review did not find documentation or physical evidence of soil or groundwater impairments associated with the use of the Property. A review of regulatory databases maintained by county, state, and federal agencies found no documentation of hazardous materials violations or discharge on the Property. A review of regulatory agency records and available databases did not identify contaminated facilities within the appropriate ASTM search distances that would be expected to impact the Property.

Based on the findings of this assessment, no Recognized Environmental Conditions (RECs) and no historical RECs were identified for the Property.

Based on the review of regulatory databases and site reconnaissance, we have identified a controlled REC (CREC):

- Petroleum hydrocarbon impacted soils were removed from an area south of the Property and encapsulated below the road section at the intersection of West Leland Road and Alves Ranch Road. Although encapsulated adjacent to the Property, given the depth of encapsulation (greater than 30 feet below ground surface), the presence of this material is not considered to pose an environmental concern for residential development of the Property.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312). This assessment has revealed no evidence of RECs in connection with the Property.

ENGEO recommends no further environmental studies at this time.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **STANDARD ENVIRONMENTAL RECORDS**

#### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

#### ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/31/2017 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

### State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 5 LUST sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the SLIC list, as provided by EDR, has revealed that there is 1 SLIC site within approximately 0.5 miles of the target property.

Site History: The 28-acre site was originally part of a larger 85-acre industrial facility that was owned and operated by Shell Chemical Company. From 1930 to 1967, the 85-acre facility was a commercial ammonia fertilizer manufacturing plant, and since 1945, it has manufactured metal catalysts. Several manufacturing and storage facilities have existed on this site, such as aboveground storage tanks, a benzol plant and a compressor plant. In 1988, Limited Partners Catalyst Holding Company (LPCH) assumed ownership of the catalyst manufacturing facility; the facility continues to manufacture several types of catalysts. Currently, administration buildings, a laboratory, catalyst manufacturing, storage and shipping facilities, a PG&E substation as well as a change room and training center are located on the 28-acre site.

**Biennial Reports:**

Last Biennial Reporting Year: 2017

**Annual Waste Handled:**

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Comments: This report was uploaded in May of 2015. In 1998, soil samples were taken from sediments at the inlet and outlet of the pipeline and from the surface soil down stream of SW-1 (Figure 1). Lead concentrations were 960 mg/kg at the inlet, 3,300 mg/kg at the outlet and 3,900 mg/kg in surface soil down stream of SW-1. Additional samples were collected in the discharge path from SW-1 with highest lead concentration of 4,300 mg/kg. Other selected areas suspected to have elevated concentrations of lead. The highest lead concentrations were within 0 -3 from the surface. The highest lead concentration was 3,800 mg/kg. The CCCHD Inspection Report of 2/8/2000 reported an ongoing remedial activity associated with past lead pot and exhaust stack having been removed September 1998. No remediation report was found in county records.

**FINDS:**

Registry ID: 110000483389

**Environmental Interest/Information System**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

**HAZARDOUS AIR POLLUTANT MAJOR**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

##### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

##### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

|                                         |                                        |

##### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

|                                         |                                        |

### ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

|                                         |                                         |

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

|                                         |                                        |

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

|                                         |                                        |

|                                         | Data Release Frequency: Quarterly      |

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

|                                         |                                         |

### ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

|                                         |                                         |

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

|                                         |                                         |
|-----------------------------------------|-----------------------------------------|
| Date of Government Version: 09/13/2017  | Source: Environmental Protection Agency |
| Date Data Arrived at EDR: 09/26/2017    | Telephone: (415) 495-8895               |

|                                         | Data Release Frequency: Quarterly       |

### RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

|                                         |                                         |

|                                         | Data Release Frequency: Varies          |

#### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/18/2017

Date Data Arrived at EDR: 09/21/2017

Date Made Active in Reports: 10/13/2017

Number of Days to Update: 22

Source: National Response Center, United States Coast Guard

Telephone: 202-267-2180

Last EDR Contact: 09/21/2017

Next Scheduled EDR Contact: 01/08/2018

Data Release Frequency: Quarterly

## ***State- and tribal - equivalent NPL***

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity.

These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 07/31/2017

Date Data Arrived at EDR: 08/01/2017

Date Made Active in Reports: 08/15/2017

Number of Days to Update: 14

Source: Department of Toxic Substances Control

Telephone: 916-323-3400

Last EDR Contact: 10/31/2017

Next Scheduled EDR Contact: 02/12/2018

Data Release Frequency: Quarterly

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 07/31/2017

Date Data Arrived at EDR: 08/01/2017

Date Made Active in Reports: 08/15/2017

Number of Days to Update: 14

Source: Department of Toxic Substances Control

Telephone: 916-323-3400

Last EDR Contact: 10/31/2017

Next Scheduled EDR Contact: 02/12/2018

Data Release Frequency: Quarterly

## ***State and tribal landfill and/or solid waste disposal site lists***

SWF/LF (SWIS): Solid Waste Information System

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 08/14/2017

Date Data Arrived at EDR: 08/17/2017

Date Made Active in Reports: 09/21/2017

Number of Days to Update: 35

Source: Department of Resources Recycling and Recovery

Telephone: 916-341-6320

### SLIC: Statewide SLIC Cases (GEOTRACKER)

Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Next Scheduled EDR Contact: 01/08/2018  
Data Release Frequency: Varies

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/19/2017

Next Scheduled EDR Contact: 02/12/2018  
Data Release Frequency: Varies

### **Local Lists of Hazardous waste / Contaminated Sites**

#### US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 07/13/2017  
Date Data Arrived at EDR: 09/06/2017  
Date Made Active in Reports: 10/06/2017  
Number of Days to Update: 30

Source: Drug Enforcement Administration  
Telephone: 202-307-1000  
Last EDR Contact: 08/30/2017  
Next Scheduled EDR Contact: 12/11/2017  
Data Release Frequency: No Update Planned

#### HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 08/08/2005  
Date Data Arrived at EDR: 08/03/2006

Data Release Frequency: No Update Planned

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/13/2017  
Date Data Arrived at EDR: 09/06/2017  
Date Made Active in Reports: 10/06/2017

Data Release Frequency: No Update Planned

### Local Land Records

#### LIENS: Environmental Liens Listing

A listing of property locations with environmental liens for California where DTSC is a lien holder.

Date of Government Version: 06/02/2017  
Date Data Arrived at EDR: 06/06/2017  
Date Made Active in Reports: 08/22/2017  
Number of Days to Update: 77

Source: Department of Toxic Substances Control  
Telephone: 916-323-3400  
Last EDR Contact: 08/31/2017  
Next Scheduled EDR Contact: 12/18/2017  
Data Release Frequency: Varies

#### LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 07/11/2017  
Date Data Arrived at EDR: 07/26/2017

Data Release Frequency: Semi-Annually

#### DEED: Deed Restriction Listing

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

### Other Ascertainable Records

#### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 09/13/2017

Data Release Frequency: Quarterly

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

Data Release Frequency: Quarterly

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995  
Date Data Arrived at EDR: 07/03/1995  
Date Made Active in Reports: 08/07/1995

|                                         | Data Release Frequency: Quarterly       |

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

|                                         |                                           |

Last EDR Contact: 11/02/2017  
Next Scheduled EDR Contact: 02/19/2018  
Data Release Frequency: Varies

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Data Release Frequency: No Update Planned

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 10/12/2016

### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Date of Government Version: 09/25/2017

Next Scheduled EDR Contact: 12/25/2017  
Data Release Frequency: Quarterly

### FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/23/2017  
Date Data Arrived at EDR: 09/06/2017

|                                         | Data Release Frequency: Varies                       |

### HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

|                                         |                                                    |

Data Release Frequency: Varies

### WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

Date of Government Version: 04/15/2015  
Date Data Arrived at EDR: 04/17/2015

Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: N/A

#### EDR Hist Cleaner: EDR Exclusive Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

#### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### FEMA FLOOD ZONE

| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
|---------------------------------------------|-------------------------|
| 06013C0114G                                 | FEMA FIRM Flood data    |

| 06013C0113G                                 | FEMA FIRM Flood data    |

### NATIONAL WETLAND INVENTORY

| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u>            |
|------------------------------------|------------------------------------------------|
| HONKER BAY                         | YES - refer to the Overview Map and Detail Map |

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

#### ***Site-Specific Hydrogeological Data\*:***

|                |            |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status:        | Not found  |

### AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|-------------------------------------------|
| Not Reported  |                         |                                           |

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

|         |                                            |
|---------|--------------------------------------------|
| Era:    | Cenozoic                                   |
| System: | Tertiary                                   |
| Series: | Miocene                                    |
| Code:   | Tm (decoded above as Era, System & Series) |

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: DIABLO

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information |           |           |                    |                                                                        |                                                                             |                                              |                      |
|------------------------|-----------|-----------|--------------------|------------------------------------------------------------------------|-----------------------------------------------------------------------------|----------------------------------------------|----------------------|
| Layer                  | Boundary  |           | Soil Texture Class | Classification                                                         |                                                                             | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH)   |

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### RADON

#### State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Engeo Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

### **PRELIMINARY REPORT**

In response to the above referenced application for a policy of title insurance, this company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Exhibit A attached. *The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties.* Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Exhibit A. Copies of the policy forms should be read. They are available from the office which issued this report.

**Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.**

**It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.**

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of September 28, 2017 at 7:30 A.M.

The form of Policy of title insurance contemplated by this report is:

ALTA Extended Loan Policy - 2006

ALTA Extended Owner Policy - 2006

A specific request should be made if another form or additional coverage is desired.

Title to said estate or interest at the date hereof is vested in:

ALVES RANCH, LLC, A CALIFORNIA LIMITED LIABILITY COMPANY

The estate or interest in the land hereinafter described or referred to covered by this Report is:

A fee.

The Land referred to herein is described as follows:

(See attached Legal Description)

At the date hereof exceptions to coverage in addition to the printed Exceptions and Exclusions in said policy form would be as follows:

1. General and special taxes and assessments for the fiscal year 2017-2018, a lien not yet due or payable.
2. Assessment liens, if applicable, collected with the general and special taxes, including but not limited to those disclosed by the reflection of the following on the tax roll:

Community Facilities District Mt Diablo Mello Roos.

3. The land lies within the boundaries of assessment/community facilities District 1999-01, as disclosed by a map filed OCTOBER 5, 1999 in BOOK 65, PAGE 39 of maps of assessment and community facilities districts.
4. The land lies within the boundaries of assessment/community facilities District 2000-1, as disclosed by a map filed JUNE 8, 2000 in BOOK 66, PAGE 27 of maps of assessment and community facilities districts.
5. The land lies within the boundaries of Southwest Pittsburg Geologic Hazard Abatement District II, as disclosed by an assessment map in Book 81, Page 33 recorded MARCH 22, 2007 as INSTRUMENT NO. 2007-0084381 of Official Records.

6. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.

7. An easement for RIGHT OF WAY FOR ELECTRIC TRANSMISSION LINES and incidental purposes, recorded DECEMBER 7, 1937 as BOOK 449, PAGE 307 of Official Records.

In Favor of: PACIFIC GAS AND ELECTRIC COMPANY

Affects: A PORTION OF THE LAND

8. An easement for ELECTRICAL, POWER TRANSMISSION and incidental purposes, recorded DECEMBER 1, 1992 as INSTRUMENT NO. 1992-318205 IN BOOK 18077, PAGE 700 of Official Records.

In Favor of: CONTRA COSTA COUNTY

Affects: A PORTION OF THE LAND

AND RECORDED MARCH 17, 1993 AS INSTRUMENT NO. 1993-66554 IN BOOK 18355, PAGE 639 OF OFFICIAL RECORDS.

9. Abutter's rights of ingress and egress to or from STATE FREEWAY have been relinquished in the document recorded DECEMBER 1, 1992 as BOOK 18077, PAGE 700 of Official Records.

AND RECORDED MARCH 17, 1993 AS INSTRUMENT NO. 1993-66554 IN BOOK 18355, PAGE 639 OF OFFICIAL RECORDS.

10. Abutter's rights of ingress and egress to or from STATE FREEWAY have been relinquished in the document recorded AUGUST 12, 1993 as INSTRUMENT NO. 1993-215279 IN BOOK 18836, PAGE 602 of Official Records.

11. A waiver of any claims for damages by reason of the location, construction, landscaping or maintenance of a contiguous freeway, highway, roadway or transit facility as contained in the document recorded AUGUST 12, 1993 as INSTRUMENT NO. 1993-215279 IN BOOK 18836, PAGE 602 of Official Records.

12. Any facts, rights, interests or claims that may exist or arise by reason of matters, if any, disclosed by that certain Record of Survey filed AUGUST 29, 2001 in Book121, Page 32 .

13. The terms and provisions contained in the document entitled DEVELOPMENT AGREEMENT BETWEEN THE CITY OF PITTSBURG, CALIFORNIA AND ALVES RANCH, LLC AND WILLIAM LYON HOMES, INC. recorded FEBRUARY 25, 2005 as INSTRUMENT NO. 2005-065303 of Official Records.

Document(s) declaring modifications thereof recorded JUNE 14, 2005 as INSTRUMENT NO. 2005-0213402 of Official Records.

Document(s) declaring modifications thereof recorded AUGUST 10, 2006 as INSTRUMENT NO. 2006-0253453 of Official Records.

Document(s) declaring modifications thereof recorded SEPTEMBER 21, 2010 as INSTRUMENT NO. 2010-0199994 of Official Records.

Document(s) declaring modifications thereof recorded OCTOBER 8, 2010 as INSTRUMENT NO. 2010-0218997 of Official Records.

14. AN UNRECORDED REAL ESTATE PURCHASE AGREEMENT AND JOINT ESCROW INSTRUCTIONS DATED AUGUST 5, 2003 BY AND BETWEEN ALVES RANCH, LLC, A CALIFORNIA LIMITED LIABILITY COMPANY ("SELLER"), AND LYON VISTA DEL MAR 533, LLC, A DELAWARE LIMITED LIABILITY COMPANY ("BUYER"), AS DISCLOSED IN A TEMPORARY CONSTRUCTION EASEMENT RECORDED JUNE 29, 2005, DOCUMENT NO. 2005-0237442, CONTRA COSTA COUNTY RECORDS.

The location of the easement cannot be determined from record information.

15. An easement shown or dedicated on the Map as referred to in the legal description  
For: Private access, public utility and incidental purposes.
16. An easement for TEMPORARY CONSTRUCTION and incidental purposes, recorded JUNE 29, 2005 as INSTRUMENT NO. 2005-0237442 of Official Records.  
In Favor of: LYON VISTA DEL MAR 533, LLC, A DELAWARE LIMITED LIABILITY COMPANY  
Affects: A PORTION OF THE LAND

The location of the easement cannot be determined from record information.

17. The terms and provisions contained in the document entitled AFFORDABLE HOUSING AGREEMENT recorded SEPTEMBER 5, 2006 as INSTRUMENT NO. 2006-0281807 of Official Records.
18. The fact that the land lies within the boundaries of the Los Medanos Community Redevelopment Project Area, as disclosed by various documents of record.
19. Water rights, claims or title to water, whether or not shown by the public records.
20. Rights of parties in possession.
21. Any facts, rights, interests or claims which would be disclosed by a correct ALTA/NSPS survey.

**Prior to the issuance of any policy of title insurance, the Company will require:**

22. With respect to Alves Ranch, LLC, a California limited liability company:
- a. A copy of its operating agreement and any amendments thereto;
  - b. If it is a California limited liability company, that a certified copy of its articles of organization (LLC-1) and any certificate of correction (LLC-11), certificate of amendment (LLC-2), or restatement of articles of organization (LLC-10) be recorded in the public records;
  - c. If it is a foreign limited liability company, that a certified copy of its application for registration (LLC-5) be recorded in the public records;
  - d. With respect to any deed, deed of trust, lease, subordination agreement or other document or instrument executed by such limited liability company and presented for recordation by the Company or upon which the Company is asked to rely, that such document or instrument be executed in accordance with one of the following, as appropriate:
    - (i) If the limited liability company properly operates through officers appointed or elected pursuant to the terms of a written operating agreement, such document must be executed by at least two duly elected or appointed officers, as follows: the chairman of the board, the president or any vice president, and any secretary, assistant secretary, the chief financial officer or any assistant treasurer;
    - (ii) If the limited liability company properly operates through a manager or managers identified in the articles of organization and/or duly elected pursuant to the terms of a written operating agreement, such document must be executed by at least two such managers or by one manager if the limited liability company properly operates with the existence of only one manager.

- e. Other requirements which the Company may impose following its review of the material required herein and other information which the Company may require.
23. An ALTA/NSPS survey of recent date which complies with the current minimum standard detail requirements for ALTA/NSPS land title surveys.

|                            |
|----------------------------|
| <b>INFORMATIONAL NOTES</b> |
|----------------------------|

Note: The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than the certain dollar amount set forth in any applicable arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. If you desire to review the terms of the policy, including any arbitration clause that may be included, contact the office that issued this Commitment or Report to obtain a sample of the policy jacket for the policy that is to be issued in connection with your transaction.

1. General and special taxes and assessments for the fiscal year 2016-2017.

***NOTICE***

Section 12413.1 of the California Insurance Code, effective January 1, 1990, requires that any title insurance company, underwritten title company, or controlled escrow company handling funds in an escrow or sub-escrow capacity, wait a specified number of days after depositing funds, before recording any documents in connection with the transaction or disbursing funds. This statute allows for funds deposited by wire transfer to be disbursed the same day as deposit. In the case of cashier's checks or certified checks, funds may be disbursed the next day after deposit. In order to avoid unnecessary delays of three to seven days, or more, please use wire transfer, cashier's checks, or certified checks whenever possible.

**EXHIBIT A**  
**LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (BY POLICY TYPE)**

**CLTA STANDARD COVERAGE POLICY – 1990**  
**EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.  
(b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
  - (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
  - (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
  - (c) resulting in no loss or damage to the insured claimant;
  - (d) attaching or created subsequent to Date of Policy; or
  - (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

**EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I**

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.  
Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

**CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)**  
**EXCLUSIONS**

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
  - a. building;
  - b. zoning;
  - c. land use;

- d. improvements on the Land;
  - e. land division; and
  - f. environmental protection.
- This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
- 2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
  - 3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
  - 4. Risks:
    - a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
    - b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
    - c. that result in no loss to You; or
    - d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
  - 5. Failure to pay value for Your Title.
  - 6. Lack of a right:
    - a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
    - b. in streets, alleys, or waterways that touch the Land.

This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
  - 7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
  - 8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
  - 9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

#### **LIMITATIONS ON COVERED RISKS**

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:  
For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.  
The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

|                  | <u>Your Deductible Amount</u>                                             | <u>Our Maximum Dollar Limit of Liability</u> |
|------------------|---------------------------------------------------------------------------|----------------------------------------------|
| Covered Risk 16: | 1% of Policy Amount Shown in Schedule A or \$2,500<br>(whichever is less) | \$10,000                                     |
| Covered Risk 18: | 1% of Policy Amount Shown in Schedule A or \$5,000<br>(whichever is less) | \$25,000                                     |
| Covered Risk 19: | 1% of Policy Amount Shown in Schedule A or \$5,000<br>(whichever is less) | \$25,000                                     |

#### **2006 ALTA LOAN POLICY (06-17-06)**

##### **EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

- 1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
  - (i) the occupancy, use, or enjoyment of the Land;
  - (ii) the character, dimensions, or location of any improvement erected on the Land;
  - (iii) the subdivision of land; or
  - (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
- 2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
- 3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

- (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
  5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
  6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
    - (a) a fraudulent conveyance or fraudulent transfer, or
    - (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
  7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

#### EXCEPTIONS FROM COVERAGE

[Except as provided in Schedule B - Part II, [t[or T]his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

##### [PART I

[The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

##### PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:]

#### 2006 ALTA OWNER'S POLICY (06-17-06)

##### EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
  - (i) the occupancy, use, or enjoyment of the Land;
  - (ii) the character, dimensions, or location of any improvement erected on the Land;
  - (iii) the subdivision of land; or
  - (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

- (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 or 10); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
    - (a) a fraudulent conveyance or fraudulent transfer, or
    - (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
  5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

#### EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of: [The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.
7. [Variable exceptions such as taxes, easements, CC&R's, etc. shown here.]

#### ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (07-26-10)

#### EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
  - (i) the occupancy, use, or enjoyment of the Land;
  - (ii) the character, dimensions, or location of any improvement erected on the Land;
  - (iii) the subdivision of land; or
  - (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.

(b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
  - (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the

Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.

7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
  - (a) a fraudulent conveyance or fraudulent transfer, or
  - (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

*First American Title*

#### **Privacy Information**

#### **We Are Committed to Safeguarding Customer Information**

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information - particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our subsidiaries we have adopted this Privacy Policy to govern the use and handling of your personal information.

#### **Applicability**

This Privacy Policy governs our use of the information that you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its Fair Information Values.

#### **Types of Information**

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

#### **Use of Information**

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

#### **Former Customers**

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

#### **Confidentiality and Security**

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's Fair Information Values. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

#### **Information Obtained Through Our Web Site**

First American Financial Corporation is sensitive to privacy issues on the Internet. We believe it is important you know how we treat the information about you we receive on the Internet. In general, you can visit First American or its affiliates' Web sites on the World Wide Web without telling us who you are or revealing any information about yourself. Our Web servers collect the domain names, not the e-mail addresses, of visitors. This information is aggregated to measure the number of visits, average time spent on the site, pages viewed and similar information. First American uses this information to measure the use of our site and to develop ideas to improve the content of our site. There are times, however, when we may need information from you, such as your name and email address. When information is needed, we will use our best efforts to let you know at the time of collection how we will use the personal information. Usually, the personal information we collect is used only by us to respond to your inquiry, process an order or allow you to access specific account/profile information. If you choose to share any personal information with us, we will only use it in accordance with the policies outlined above.

#### **Business Relationships**

First American Financial Corporation's site and its affiliates' sites may contain links to other Web sites. While we try to link only to sites that share our high standards and respect for privacy, we are not responsible for the content or the privacy practices employed by other sites.

#### **Cookies**

Some of First American's Web sites may make use of "cookie" technology to measure site activity and to customize information to your personal tastes. A cookie is an element of data that a Web site can send to your browser, which may then store the cookie on your hard drive. [FirstAm.com](http://FirstAm.com) uses stored cookies. The goal of this technology is to better serve you when visiting our site, save you time when you are here and to provide you with a more meaningful and productive Web site experience.

#### **Fair Information Values**

**Fairness** We consider consumer expectations about their privacy in all our businesses. We only offer products and services that assure a favorable balance between consumer benefits and consumer privacy.

**Public Record** We believe that an open public record creates significant value for society, enhances consumer choice and creates consumer opportunity. We actively support an open public record and emphasize its importance and contribution to our economy.

**Use** We believe we should behave responsibly when we use information about a consumer in our business. We will obey the laws governing the collection, use and dissemination of data.

**Accuracy** We will take reasonable steps to help assure the accuracy of the data we collect, use and disseminate. Where possible, we will take reasonable steps to correct inaccurate information. When, as with the public record, we cannot correct inaccurate information, we will take all reasonable steps to assist consumers in identifying the source of the erroneous data so that the consumer can secure the required corrections.

**Education** We endeavor to educate the users of our products and services, our employees and others in our industry about the importance of consumer privacy. We will instruct our employees on our fair information values and on the responsible collection and use of data. We will encourage others in our industry to collect and use information in a responsible manner.

**Security** We will maintain appropriate facilities and systems to protect against unauthorized access to and corruption of the data we maintain.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

## **APPENDIX G**

### **QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL**

**JEFFREY ADAMS, PHD, PE**  
**Principal Engineer**

**EDUCATION**

BS, Civil Engineering, University of Illinois at Chicago, 1994

MS, Civil Engineering, University of Illinois at Chicago, 1996

PhD, Civil Engineering, University of Illinois at Chicago, 1999

MBA, Concentration in Real Estate and Finance, University of Washington, 2004

**EXPERIENCE**

Years with ENGEO: 17

**REGISTRATIONS & CERTIFICATIONS**

Professional Engineer, CA, 69633  
Environmental Manager, NV, 2150  
40 Hour HAZWOPER Training, CA, 12100257636

**SPECIALIZATIONS**

- Environmental & Stormwater Permitting
- Environmental Assessments and Remediation
- Environmental Restoration
- Geologic Hazard Abatement Districts (GHADs)
- Groundwater Modeling
- MS Project

Jeff joined ENGEO in 1999 and is a Principal Engineer directing environmental assessment, characterization, and remediation projects, geotechnical field reconnaissance and explorations, and engineering design and analyses. Jeff has provided financial analyses on real estate development projects as well as project cost-benefit analyses. He also is heavily involved in our Entitlement and Permitting Support services as well as our programs for Geologic Hazard Abatement Districts.

Jeff has performed numerous Phase I and II Environmental Site Assessments and site characterizations, as well as a number of analyses and studies utilizing federal, state, and local directives. He specializes in Brownfield redevelopment projects requiring integrated solutions for the mitigation of geotechnical and environmental hazards. Jeff is experienced in developing financial models, cash flow projections and budgets for a variety of projects requiring innovative financial solutions.

**Select Project Experience**

**Foster City Civic Center—Foster City, CA**

*Group Leader, Assistant Project Manager.* Jeff provided technical oversight for phase one environmental site assessment for the Foster City Civic Center site and environmental characterization operations for the site, which was suspected of having been affected by unauthorized petroleum hydrocarbon releases within the subsurface. Following the completion of a soil gas survey, Jeff and team demonstrated that vapor intrusion mitigation systems were not necessary for proposed development, providing a significant cost savings to the project. The project consists of a multi-use urban infill development.

**Alameda Landing—Alameda, CA**

*Group Leader, Project Manager.* Jeff managed the completion of a phase one environmental site assessment for the Alameda Landing site. He also directed recent environmental characterization operations for the site, which was suspected of having been affected by naturally-occurring methane deposits within the subsurface. Working closely with innovative protocols, Jeff was able to demonstrate to regulatory oversight officials that expensive vapor intrusion mitigation systems were not necessary for proposed residential structures, potentially saving millions of dollars to the site developer. The project consists of a multi-phased single-family and multi-family residential housing development.

**1000 Howe Road—Martinez, CA**

*Project Engineer.* Jeff provided a phase-one environmental site assessment for the project. In addition, he provided a preliminary geotechnical report for this property that has been used as a trucking company's storage yard. The project is a residential development that consists of single- and multiple-story detached residential units.

**Jefferson Street Development—Oakland, CA**

*Project Manager.* Jeff served as Project Manager. He provided comprehensive environmental and geotechnical consultation services for a Brownfields redevelopment project in downtown Oakland. The project included several challenges, including limited site access due to onsite business activities, environmental impact related to previous site use, and the presence of several adjacent mid-rise structures. Jeff developed cost effective remedial value engineering solutions to mitigate the presence of geotechnically and environmentally-constraining subsurface solutions. Jeff worked with the design team to establish cost-effective retaining wall and foundation systems, designed and observed a subsurface environmental mitigation program, and assisted in the design of a structure wide vapor barrier. The project, serving as a cornerstone of the revitalization of downtown Oakland, is an excellent example of Jeff's proficiency in delivering cost effective solutions to facilitate Brownfields redevelopment. The project consists of a multi-story residential condominium structure.

**San Ramon Village Plaza—Dublin, CA**

*Project Manager.* Jeff served as Project Engineer. He contributed to an environmental peer review of previous land uses, which included a former dry cleaner. Further investigation identified impact due to former site operations. Jeff assisted in a remediation program, closely collaborating with other consultants representing differed parties of the property transaction. The site was efficiently remediated, allowing for redevelopment. The project consists of a high-density residential development within the 4.68-acre mixed-use San Ramon Village Plaza site. The project consists of a high-density residential development within the 4.68-acre mixed-use San Ramon Village Plaza site.

**Los Banos Airport—Los Banos, CA**

*Project Engineer.* Jeff provided a Phase I Environmental Site Assessment and a Conceptual Soil Remediation Work Plan as part of a multi-phase development. In addition to the Phase I Environmental Site Assessment he provided a soil and groundwater characterization program. The Los Banos Airport project measures approximately 112 acres in area.

**Questa @ Neighborhood H - Mountain House—Mountain House, CA**

*Project Manager.* Jeff served as project manager. He assisted in the preparation a phase one environmental site assessment in fall 2010. Under Jeff's leadership, the project team was able to effectively navigate through the complex historic records and ownership legacy associated with the property. The report that satisfied the demands and deadline of both the ownership entity and the financial institutions associated with the property. ENGEO performed a phase I environmental site assessment on the finished lots within Questa @ Neighborhood H of the Mountain House project.

**Lockheed Martin Storm Water Pond No 4—Sunnyvale, CA**

*Project Manager.* Jeff provided permitting consultation services, including the federal and state permitting required for the maintenance of a stormwater detention system. Jeff has also provided geotechnical and environmental support to evaluate the geotechnical conditions of the site. He also determined the absence of environmentally impacted materials within the site area. The site consists of a stormwater detention basin measuring approximately 4.5 acres in area and located adjacent to sensitive habitat.

## **E.1 - Alves Ranch Detention Basin Analysis**

THIS PAGE INTENTIONALLY LEFT BLANK

TO: Joseph Azar DATE: June 5, 2018

FROM: Sarah Rahimi, P.E. JOB#: RJAA.51.18

SUBJECT: Alves Ranch Detention Basin Analysis

This memorandum summarizes the analysis Schaaf & Wheeler completed on the Vista Del Mar Project existing Detention Basin located on the Alves Ranch property north of West Leland Road in Pittsburg, CA (see Fig. 1). The Basin currently has a water quality storage volume capacity of 5 acre-feet. The water quality storage volume was sized to treat the post development runoff from the Vista Del Mar project.

The Vista Del Mar detention basin was designed to mitigate the post development 10 year peak flow from The Vista Del Mar, San Marco and Alves Ranch developments within the drainage areas of Line B-1 and Line B. The Line B-1 drainage area drains a portion of the San Marcos project to an existing 30" RCP that runs under Highway 4. Line B drainage area drains the Vista Del Mar project and the Alves Ranch property to an existing 42" RCP that runs under Highway 4. The Detention Basin detains flow from approximately 0.4 square miles directly south (entering the basin from the "Line B" storm drain pipe) in addition to detaining high flows from a diversion structure on the "Line B-1" storm drain pipe to the west, which drains approximately 0.1 square miles.

**Figure 1: Schematic and Aerial Map of Basin, Storm Drain Lines, and Flow Directions.**

The basin has four primary means of evacuating stored water:

1. The primary, **low flow outlet** for the basin is a 2.6' x 1' rectangular opening controlling flow into the outlet structure and 42-inch diameter outlet pipe. This outlet currently has its center at approximately elevation 126 feet NGVD (6.0 feet above the basin invert).
2. A **dewatering outlet** structure lies near the basin invert (120 feet NGVD). This consists of a sealed riser pipe with eight 1-1/2" diameter holes controlling outflow. This structure allows the basin to dewater while meeting water quality requirements for the storage volume between the invert and the primary outlet.
3. A **60-inch diameter overflow outlet** connects to the same outflow structure and 42-inch pipe as the primary low flow outlet. This horizontal pipe opening allows water to enter the outlet structure as weir flow over the perimeter of the pipe, starting at elevation 142 feet NGVD.
4. Finally, the dam has a concrete-lined **emergency spillway** structure at its northeast corner that allows uncontrolled spill above 143.2 feet NGVD onto Highway 4 (for extreme inflow events).

The basin was previously designed using Contra Costa County methodology. In its current configuration, the basin detains 5 AF of water quality storage ("dead storage"). The basin's outlet structures were also designed to meet specific post-development peak storm discharge requirements, based on a 10-year design standard on 12-hr duration. Peak storm discharge limits to Highway 4 set by the June 2004 EIR for the Vista Del Mar development area were 50 cfs for Line B and 67 cfs for Line B-1.

Because of the height of the embankment at Highway 4, the Basin is considered by the State to be a reservoir, impounded by an earthen dam. Based on a letter from DSOD dated May 30, 2012, the State has accepted the Dam as constructed.

## Analysis

With the proposed Alves Ranch development in the drainage area, the required water quality storage will increase to a total of 6.2 acre-feet. The analysis in HEC-HMS (Figure 2) focused on the modification of the primary outlet to provide additional water quality storage.

**Figure 2. HEC-HMS Model Schematic of Study Area**

## Hydrologic Model

Input parameters for Watershed "B" and "B-1" were previously estimated based on full build-out of the Vista Del Mar, San Marco and Alves Ranch developments as originally planned based on the approved 2008 Detention Basin Design Study.

While the original model was created using Contra Costa County HYDRO 6 hydrographs and HEC-1 detention basin routing, hydrology standards in the County have since changed. Currently, Contra Costa County supplies a HEC-HMS template that has been utilized in this analysis for both the development of the hydrographs based on County rainfall patterns and for routing flow through the detention basin. HEC-HMS was used to model the project area and the detention basin.

## Basin Infiltration Properties

The constant loss rates based on land use type have been provided by RJA, which were based on the approved Vista Del Mar Detention Basin Design Study (2008). These values are summarized in Table 1 and Table 2 and are considered typical impervious cover for each land use type.

**Table 1: Updated Calculation of Constant Loss for Watershed "B"**

| Land Use                                         | Area | Constant Loss<br>(in/hr) | Product |
|--------------------------------------------------|------|--------------------------|---------|
| Courtyard Homes                                  | 11.0 | 0.05                     | 0.55    |

**Total: 68.35 3.822**

**Average 0.056**

**Basin Lag Time**

Original lag times of 0.13 hours for both basins were used per the approved 2008 Vista Del Mar Detention Basin Design Study.

**Basin and Outlets**

The detention basin was modeled in HEC-HMS with an elevation-storage curve along with the two outlets (low flow and dewatering) and two spillways (60 in overflow and emergency spillway). The HEC-HMS

model is capable of calculating the hydraulic rating curve for defined outlet openings, but it is also capable of utilizing user-defined rating curve for more complicated outlet structures. Outlets are input into the model as shown in Table 3. Because the 60-inch overflow first acts as a circular weir, then becomes pressurized with increasing water surface elevations, it is defined as a "Spillway" in the model with a user-defined rating curve reflecting this behavior.

**Table 3: Detention Basin Model Element**

| Outlet                    | Model ID   | Method                                                 | Modification                                               |

## Model Design Storm Configuration

The HEC-HMS was calibrated to match the hydrographs produced from the HYDRO 6 model.

### *Previous Analysis Basin Parameters*

The model was run with the existing basin configuration to ensure the results are similar to the original analysis. This provides a means of ensuring the HEC-HMS results have not diverged significantly from the previously used HYDRO6 results. The 10-year and 100-year, 3-hour and 12-hour runoff hydrographs are shown in Figure 4 – Figure 6 and match very well with the results produced by the County HYDRO model of these basins. The 10-year and 100-year, 24-hour HEC-HMS and HYDRO6 hydrographs do not match that well, as shown in Figure 7 and Figure 8. To calibrate the model to better match the HYDRO hydrographs, NOAA statistics were used, which results in a better match.

## Model Results

### Dewatering Structure and Low Flow Outlet

To meet the required water quality storage, the low flow structure was modified so that the height of low flow outlet is at 128.0 NGVD. This configuration retains the required 6.2 ac-ft required for the water quality volume. The area of the dewatering structure was increased to 0.18 sq ft to allow the additional water to drain. The water quality volume drains in approximately 46.1 hours. This will require one (1) additional 1.5 inch diameter hole located at elevation 120 ft.

### Basin Performance for Design Storms

The 12-hr 10-yr maximum discharge limits to Highway 4 set by the June 2004 Vista Del Mar EIR development area were 50 cfs for Line B. Table 4 summarizes the peak flow for Line B.

**Table 4. Basin Performance for Design Storms**

| Location                      | 10-yr (cfs)                 |                                     | 100-yr (cfs)                |                                     |
|-------------------------------|-----------------------------|-------------------------------------|-----------------------------|-------------------------------------|
|                               | Developed without Detention | Developed with Detention/ Diversion | Developed without Detention | Developed with Detention/ Diversion |
| <b>Line B @ Freeway 3-hr</b>  | 287.2                       | 34.4                                | 428.6                       | 47.1                                |
| <b>Line B @ Freeway 12-hr</b> | 279.5                       | 36.9                                | 422.9                       | 51.9                                |
| <b>Line B @ Freeway 24-hr</b> | 304.5                       | 38.8                                | 417.5                       | 57.5                                |

A summary of the peak water surface elevation for the 100-yr storm in the detention basin is summarized below.

**Table 5. Detention Basin Peak Water Surface Elevations**

| Duration     | 10-yr                              |                                             | 100-yr                             |                                             |
|--------------|------------------------------------|---------------------------------------------|------------------------------------|---------------------------------------------|
|              | Water Surface Elevation (ft, NGVD) | Freeboard from Concrete Spillway (143.2 ft) | Water Surface Elevation (ft, NGVD) | Freeboard from Concrete Spillway (143.2 ft) |
| <b>3-hr</b>  | 133.8                              | 9.4                                         | 139.2                              | 4.0                                         |
| <b>12-hr</b> | 134.7                              | 8.5                                         | 141.7                              | 1.5                                         |
| <b>24-hr</b> | 135.5                              | 7.7                                         | 142.2                              | 1.0                                         |

### Diversion of Line B-1 Drainage System

The maximum allowable 12-hour 10-year design flow to Line B-1 at Highway is 67 cfs per the June 2004 Vista Del Mar EIR. Table 6 summarizes the peak flows at the diversion structure and at Highway 4.

**Table 6. Diversion Structure Performance for Design Storms**

| Duration     | 10-yr Peak Flow (cfs)             |                                    |                                       | 100-yr                            |                                    |                                       |
|--------------|-----------------------------------|------------------------------------|---------------------------------------|-----------------------------------|------------------------------------|---------------------------------------|
|              | Line B-1 Peak Flow into Structure | Peak Discharge to HWY 4 (Line B-1) | Peak Flow to Basin from B-1 Diversion | Line B-1 Peak Flow into Structure | Peak Discharge to HWY 4 (Line B-1) | Peak Flow to Basin from B-1 Diversion |
| <b>3-hr</b>  | 79.6                              | <b>60.6</b>                        | 18.9                                  | 117.5                             | 68.9                               | 48.7                                  |
| <b>12-hr</b> | 77.5                              | <b>60.1</b>                        | 17.4                                  | 116.0                             | 68.6                               | 47.4                                  |
| <b>24-hr</b> | 85.6                              | <b>62.1</b>                        | 23.5                                  | 114.8                             | 68.4                               | 46.5                                  |

## Conclusion

The HEC-HMS model was calibrated to the HYDRO6/HEC-1 modeling from the previous analysis. With the proposed Alves Ranch development plans as a basis for modification, the HMS model indicates that the low level outlet may be raised by 2.0 ft and still meets previously approved criteria per 2008 Vista Del Mar Detention Basin Design Study.

The 12-hr, 10-year storm peak discharge to Line B will be 36.9 cfs (50 cfs maximum allowable at HWY 4 per EIR). The 12-hr, 10-year storm peak discharge to Line B-1 will be 60.1 cfs (67 cfs maximum allowable at HWY 4 per EIR). The maximum 12-hr, 10-year storm peak discharge from Line B-1 to the basin is 17.4 cfs. And the 12-hr, 100-yr WSEL is contained within the basin.

  5. Ruggeri-Jensen-Azar Inc: Hydrologic Calculations, Alves Ranch and Vista Del Mar Project, Pittsburg, California, June 2018.

Mr. Roylance:

At your request, we have updated calculations performed in References 1 through 4 regarding the Alves Ranch/Vista Del Mar project located in Pittsburg, California. The purpose of the calculations is to demonstrate that the originally planned water quality basin at the outfall of the project is still adequate in size to treat stormwater runoff from the project, given changes in the land plans to both the Alves Ranch and Vista Del Mar projects since 2008.

## **METHODOLOGY**

As per the original methodology approved for the project in 2008, basin sizing follows methods developed by the Contra Costa County Clean Water program based on unit capture of rainfall runoff in relationship to percentage of Directly Connected Impervious Area (DCIA) of tributary watersheds. In order to recalculate the water quality volume required, we compared tributary areas and DCIAs for both projects based on our 2008 calculations in Reference 4 and information furnished to us by Ruggeri-Jensen-Azar Inc. in Reference 5. Using the same procedures discussed in References 1 through 4, we estimate the water quality pond for the project to have a required volume of 6.17 acre-ft.

Our calculations are attached to this report.

We understand that the land plan for the Alves Ranch project north of Leland Road is still in the preliminary phase. We therefore recommend that these calculations and the water quality basin design be verified after the final land planning on the project has been completed. However, the preliminary calculations performed in this analysis indicate that the required volume in the water quality basin is slightly less than as originally calculated in 2008.

## CLOSURE

This review presents our opinions specific to the stormwater management aspects for the proposed development. If changes occur in the nature or design of the project, we should be allowed to review such changes and provide additional comments as appropriate. Our services were limited to the review of the stormwater components of the project only. We strived to perform our review services in accordance with generally accepted engineering principles and practices currently employed in the area; no warranty is expressed or implied.

If you have any questions or comments regarding this letter, please call and we would be glad to discuss them with you.

Sincerely,

ENGEO Incorporated

Ingrid Verastegui

Subject: **Alves Ranch – Pittsburg, CA**  
**Revised Noise Contour Analysis**  
Salter Project: 18-0340

Dear Mandy:

In 2008, we prepared noise contours for the subject project per the request of the City of Pittsburg. The site plan has been updated, and you requested that we revise our analysis. This letter contains a summary of our noise contour analysis, and figures indicating the future cumulative plus project noise environment and mitigation to allow the project to meet the City's exterior noise standards. In summary, noise barriers can reduce future exterior noise levels to meet the project's exterior noise standards.

#### **ACOUSTICAL CRITERIA**

As stated in our previous studies<sup>1</sup>, the draft environmental impact report contains the following mitigation requirements for the project:

Mitigation 14-1 (b) Design common outdoor use areas in the residential portions of the project to maintain exterior noise levels to "normally acceptable" levels. These areas shall be situated away from predominant noise sources or should be shielded by natural or created topographical features, barrier, or the buildings themselves.

Mitigation 14-1 (c) Construct a noise barrier for residences proposed adjacent to West Leland Road. The noise barrier should extend approximately five to ten feet above the pad elevations to reduce traffic-generated noise levels to 60 dBA Ldn. The barrier shall take the form of a wall, berm, and/or structures that shield the outdoor use areas of the first row of residences north and south of West Leland Road.

The City interprets "Normally Acceptable" as a limit of 60 dB L<sub>dn</sub> and 65 dB L<sub>dn</sub> for single-family and multi-family residential developments, respectively.

## ANALYSIS

To quantify future cumulative plus project noise levels, we used topographical and site plan<sup>2</sup> information provided to us to prepare computer generated noise contours for the site (Figure 1). Data obtained from our on-site noise measurements were used to calibrate noise levels generated by vehicular traffic along Highway 4. To account for potential increases in traffic noise levels since our previous study, we added 1 dB to the previous levels. This is based on a report dated November 2007, by the Metropolitan Transportation Commission estimating that vehicle trips in the San Francisco Bay Area will increase by approximately 1 percent per year through the year 2035<sup>3</sup>. Over a ten-year period, this corresponds with a 1-decibel increase in average noise levels.

Noise barriers were added to our analysis where needed to meet the project noise criteria. The lot locations where these are needed are depicted on the enclosed Figure 2 along with the necessary barrier heights. The precise location and configuration will need to be determined for each barrier based on the final site layout. Noise levels shown in Figure 1 include the anticipated effect of the noise barriers. The contours are for a typical receiver height of 5-foot above grade. All noise barriers should be constructed with a surface weight not less than four pounds per square foot and be free of gaps, cracks, or openings, including along the base and at building intersections.

If the multi-family/duet units will have private balconies, many would be exposed to noise levels up to approximately 75 dB  $L_{dn}$ , which exceeds of the City's 65 dB  $L_{dn}$  exterior noise goal. Therefore, any balconies located in areas indicated on Figure 3 would require additional mitigation. This could include partial height or full "greenhouse-type" noise barriers. The specific treatments shall be determined on a unit-by-unit basis. Results of the unit-by-unit analysis, including the description of the necessary noise control treatments, shall be submitted to the City with the building plans and approved prior to issuance of a building permit.

## DRAFT MEMORANDUM

Date: June 13, 2018  
To: Mary Bean, First Carbon Solutions  
From: Kathrin Tellez and Mark Howard  
**Subject: Alves Ranch – Trip Generation Assessment**

*WC18-3500.02*

---

Fehr & Peers prepared a trip generation assessment for the Alves Ranch project on West Leland Road at Alves Ranch Road in Pittsburg. The site was originally entitled to develop 560 multi-family dwelling units and 257,000 square-feet of business commercial uses, and is currently proposed to be developed with up to 346 single-family dwelling units and up to approximately 140,000 square-feet of general retail uses, including up to a 40,000 square-foot grocery store. The purpose of this assessment is to determine if the currently proposed project would generate vehicle traffic at levels similar to or less than levels generated by the original entitlements.

Results of the comparison indicate that the current proposal would generate similar levels of vehicle traffic as compared to the project evaluated in the 2004 Environmental Impact Report (2004 EIR) that served as the basis for the initial project approvals and entitlements. Although the currently proposed project is expected to generate the same overall levels of vehicle traffic, some site access and circulation parameters have changed and additional assessment of site access and circulation may be necessary to ensure that intersections that serve the site are adequate to accommodate the expected travel flows.

The following presents our project understanding, trip generation comparison, and conclusions.

### PROJECT BACKGROUND AND UNDERSTANDING

The project site is located on West Leland Road at Alves Ranch Road in Pittsburg, as shown on **Figure 1**. The site is bound by State Route 4 to the north, a residential development to the west, West Leland Road to the south, and an undeveloped parcel to the east. Surrounding land uses are

primarily residential, with the Pittsburg/Bay Point BART station in close proximity to the site (approximately 1,500 feet). A shopping center is located at the corner of West Leland Road at Bailey Road, less than one-mile from the site.

A certified Environment Impact Report was prepared in 2004 (2004 EIR), which documented the transportation impacts of the then proposed project, which included 563 apartment units, 206,000 up which included a mixture of housing types with up to 170 single-family homes, 308 apartment units, 170,000 square feet of office, and 51,500 square feet of retail uses; a trip generation assessment prepared for the 2008 project concluded that the trip generation was lower than the entitled project and that the severity of the transportation impacts identified as part of the 2004 EIR would not change.

As currently contemplated, the approximately 38-acre site is proposed to be developed with up to 346 dwelling units, including 136-attached single-family homes and 210 detached single-family homes on 26 acres. The remaining 12-acres would be developed with general retail uses, with a maximum development size of approximately 140,000 square feet, including up to a 40,000 square foot grocery store.

Access to the site is proposed from two locations on West Leland Road. As part of the project, Alves Ranch Road would be extended north into the site and form the fourth leg of an existing signalized intersection with West Leland Road. A full access unsignalized intersection is also proposed on West Leland Road, west of Alves Ranch Road, off-set with Tomales Bay Drive on the south side of West Leland Road, which would remain a right-in/right-out side-street stop controlled intersection. An emergency vehicle access location would be provided on the eastern portion of the site, approximately 750 feet east of Alves Ranch Road.

As part of the project, a 10-foot wide trail would be constructed on the north side of West Leland Road along the project frontage, connecting to an existing sidewalk in the west. Subsequent to the completion of the project, there would be a sidewalk gap of approximately 1,100 feet on the north side of West Leland Avenue between Woodhill Drive and the BART access roadway. Class II bicycle facilities are provided on West Leland Road, which would not be altered as a result of the project.

## TRIP GENERATION

Trip generation is the process of estimating the total amount of trips generated by a site, as well as the expected travel mode. For this project, trip generation rates presented in the Institute of

Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition) were used. For the 2004 and 2008 analyses, the 7th Edition of the Trip Generation publication was used. Since the time those analyses were prepared, ITE released several updates to the *Trip Generation Manual* and the most current manual is the most appropriate source to estimate potential project trips. The 2004 and 2008 trip generation estimates considered a 6 percent transit reduction for the projects residential uses to account for the close proximity to the BART station, and a 20 percent internalization factor between the retail and residential portions of the site, reflecting that many future retail patrons would already be within the general project vicinity and would not need to travel on the local or regional roadway system to access the site.

At retail establishments, such as the one that could be developed as part of the commercial parcel, driveway traffic comprises: (1) new traffic generated by the project, (2) traffic that would otherwise already be on the adjacent roadways but the driver decides to stop at the site (e.g., to purchase an item on their way home from work), and (3) traffic on other nearby roadways, but the driver decides to take a short detour to stop at the site. The trips in Item 2 are referred to as “pass-by” trips and the trips in Item 3 are referred to as “diverted-link” trips.

Information contained in the ITE *Trip Generation Handbook* and surveys of similar uses was used to estimate pass-by and diverted-link trips. For grocery stores, the average pass-by rate is 36 percent, and the average diverted linked trip rate is 32 percent during PM peak hour (limited data is available for the AM peak hour). In other words, at a grocery store, approximately, 68 percent of the traffic entering and exiting the site is already on the surrounding roadway system – not a new vehicle trip to the area. For shopping centers, the average pass-by rate is 32 percent and the average diverted linked trip rate is 16 percent, or approximately 50 percent of the vehicle traffic is already on the roadway system.

For this assessment, a pass-by/diverted trip reduction was applied to the grocery store component of the project only as this is a specific proposed use and the trip making characteristics are well documented. For the proposed general retail, no pass-by or diverted trip reduction was taken, similar to the 2004 EIR and 2008 Addendum as there is no information about the those proposed uses. As the project components are better defined, the application of appropriate pass-by rates is recommended.

The proposed project trip generation estimates are presented in **Table 1**, which shows that the current project proposal is expected to generate approximately 7,810 weekday daily trips, including 436 morning peak hour and 774 evening peak hour trips when considering the same transit and

internal trip reductions as the 2004 EIR and 2008 Addendum analysis, as well as application of a pass-by/diverted-trip reduction for the grocery store component.

PM Peak Hour: T = 3.81 (X); Enter = 48%; Exit = 52%
  - Reflects a 40 percent pass-by/diverted trip reduction for grocery store only trips.
  - Reflects a 20 percent reduction of retail trips to account for internal interactions between the grocery store, retail and residential portions of the project.
- Source: *Trip Generation Manual* (10<sup>th</sup> Edition), ITE, 2017; Fehr & Peers, 2018.

The resulting trip generation estimates from Table 1 were then compared to the trip generation estimates for the project evaluated in the 2004 EIR and the 2008 Addendum, as presented in **Table 2**. This comparison shows that compared to the 2004 EIR project, the current proposal would generate slightly more daily vehicle trips, approximately 30 percent fewer morning peak hour trips, and slightly fewer evening peak hour trips. As compared to the 2008 Addendum project, the current proposal would generate slightly more daily vehicle trips, almost one-third fewer morning peak hour trips, and slightly more evening peak hour trips.

Source: Addendum to the 2004 Environmental Impact Report for the Vista Del Mar Project, August 2008 and Fehr & Peers, 2018.

During the PM peak hour, the directionality of some vehicle trips could change with the proposed project as compared to the 2004 EIR project, with more inbound trips (approximately 60 more trips) and fewer outbound trips (approximately 75 fewer trips). This is due to the increased level of retail proposed for the site, as compared to business commercial uses. It should be noted that the proposed grocery store and supporting retail are intended to be locally serving, meaning that the vast majority of patrons come from within a 2 to 3 mile radius, with most patrons from within a 1-mile radius. As such, the vehicle trips lengths tend to be shorter than for other types of commercial uses, such as an office, and tend not to use the regional transportation system, such as State Route 4, unless they are part of an already planned trip, such as a stop at the grocery store on the

way home from work. Additionally, the addition of retail to the area is expected to replace some retail trips that are already be occurring in the area by providing additional retail options closer to existing and planned residential neighborhoods where local retail is not present.

As future commercial development plans are future defined, use of the general shopping center rate, as presented in this assessment, may be appropriate if the proposed restaurant square-footage does not exceed 20 percent of the non-grocery store square-footage and other uses are not yet well defined. However, it is recommended that a detailed trip generation assessment be prepared once a development plan has been proposed, and the appropriate trip generation rate, internal trip reduction factors, and pass-by/diverted trip factors applied.

## CONCLUSION

Results of the comparison indicate that the current proposal would generate slightly less vehicle traffic than the project evaluated in the 2004 Environmental Impact Report (2004 EIR) that served as the basis for the initial project approvals and entitlements. Although the currently proposed project is expected to generate less overall vehicle traffic, some site access and circulation parameters have changed and additional assessment of site access and circulation may be necessary to ensure that intersections that serve the site are adequate to accommodate the expected travel flows.

This completes our trip generation assessment for Alves Ranch. Please contact Kathrin or Mark at (925) 930-7100 if you have questions.

## **H.1 - Base Wastewater Flow Memorandum**

THIS PAGE INTENTIONALLY LEFT BLANK

## MEMORANDUM

To: Mandy Leung, William Lyon Homes  
From: Joseph Azar  
Date: June 5, 2018  
Subject: Alves Ranch Development – Base Wastewater Flow

RJA Job No. 171084

The 2003 final report for the City of Pittsburg Wastewater Collection System Master Plan allocated a future Base Wastewater Flow (BWF) from 669 Single Family Homes, 513 Multi-Family Homes and 21 acres of Commercial for sub-basin 105 or the Alves Ranch property which included Vista Del Mar and Alves Ranch Developments.

Since the Vista Del Mar Development has only 518 Single Family Homes, this resulted in an allocated wastewater flow from 151 Single Family Homes, 513 Multi-Family Homes and 21 acres of Commercial for the Alves Ranch Development.

In August 2011, the City issued Amendment #3 to the 2003 final report. Amendment #3 revised the ultimate land use for sub-basin 105 or the Alves Ranch property to the following: 704 Single Family Homes, 300 Multi-Family Homes, 93 Apartments and 14 acres of Commercial. This resulted in a wastewater flow allocation from 186 Single Family Homes, 300 Multi-Family Homes, 93 Apartments and 14 acres of Commercial for the Alves Ranch Development.

The 2018 proposed Master Site Plan for the Alves Ranch Development has 346 Single Family Homes and 12 acres of Commercial.

The following Table A shows the Base Wastewater Flow (BWF) generation from the 2003 final report, August 2011 Amendment #3, and the 2018 proposed Master Site Plan for the Alves Ranch Development:

**Table A**  
**Base Wastewater Flow (BWF)**

| <b>Alves Ranch Development</b> | <b>Single Family</b> | <b>Multi-Family</b> | <b>Apartments</b> | <b>Commercial</b> | <b>BWF*<br/>(mgd)</b> |
|--------------------------------|----------------------|---------------------|-------------------|-------------------|-----------------------|
| 2003 Final Report              | 151                  | 513                 | 0                 | 21                | 0.14                  |
| August 2001 Amend. #3          | 186                  | 300                 | 93                | 14                | 0.12                  |
| 2018 proposed Master Site Plan | 346                  | 0                   | 0                 | 12                | 0.09                  |

\* using 220 gpd/unit for Single Family  
170 gpd/unit for Multi-Family  
150 gpd/unit for Apartments  
1000 gpd/unit for Commercial

Based on Table A above, the BWF generation from the proposed 2018 Master Site Plan for the Alves Ranch Development will be decreased by approximately 36% and 25% respectively from the previously approved allocated BWF shown in the 2003 final report and the August 2001 Amendment #3.

## **H.2 - Future Water Demand Memorandum**

THIS PAGE INTENTIONALLY LEFT BLANK

## MEMORANDUM

To: Mandy Leung, William Lyon Homes  
 From: Joseph Azar  
 Date: June 4, 2018  
 Subject: Alves Ranch Development Future Water Demand

RJA Job No. 171084

Table A below shows the Alves Ranch Development Future Water Demand as shown in the City of Pittsburg Water System Master Plan, dated December 2015:

**Table A**

| Development Name | Residential Dwelling Units |              | Commercial | Residential, Commercial, and Industrial Demands |       |       |       |       |       |
|------------------|----------------------------|--------------|------------|-------------------------------------------------|-------|-------|-------|-------|-------|
|                  | Single Family              | Multi-Family |            | ADD                                             |       | MDD   |       | PHD   |       |
|                  | (DU)                       | (DU)         |            | (gpm)                                           | (MGD) | (gpm) | (MGD) | (gpm) | (MGD) |
| Alves Ranch      | 167                        | 393          | 5.1        | 119.1                                           | 0.17  | 214.5 | 0.31  | 333.6 | 0.48  |

ADD (Average Day Demand) = using 340 gpd/du for Residential Single Family, 270 gpd/du for Residential/Multi-Family and 1,700 for Commercial

MDD (Maximum Day Demand) = 1.8 x ADD

PHD (Peak Hour Demand) = 2.8 x ADD

Table B below shows the Alves Ranch Water Demand based on the proposed New Master Site Plan:

**Table B**

| Development Name | Residential Dwelling Units |              | Commercial | Residential, Commercial, and Industrial Demands |       |        |       |        |       |
|------------------|----------------------------|--------------|------------|-------------------------------------------------|-------|--------|-------|--------|-------|
|                  | Single Family              | Multi-Family |            | ADD                                             |       | MDD    |       | PHD    |       |
|                  | (DU)                       | (DU)         |            | (gpm)                                           | (MGD) | (gpm)  | (MGD) | (gpm)  | (MGD) |
| Alves Ranch      | 346                        | 0            | 12         | 95.83                                           | 0.138 | 172.21 | 0.248 | 268.04 | 0.386 |

Based on Table A above, the water demand from the proposed new Alves Ranch Development will be decreased by approximately 19% from the allocated water demand for the Alves Ranch Development as shown in the approved City of Pittsburg Water System Master Plan, dated December 2015.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                |                                              |                              | Date                       | Initial |
| Visual Factors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                |                                              |                              |                            |         |
| <p><b>Mitigation 5-1.</b> To minimize the degree of project-specific adverse impact on the visual character and quality of the project site, the project shall include an overall layout and grading plan, and associated set of design standards and controls for grading, creekway and landform protection, individual site and architectural design (including individual custom lot architectural design), common and private landscaping, public and private roadways, and light and glare (including outdoor lighting), which to the satisfaction of the Pittsburgh Planning Commission, as determined through the City's design review process, will sufficiently minimize the degree of adverse impact on the general visual character of the project site. Based upon related land use and urban design goals and policies set forth in the City of Pittsburgh General Plan and General Plan EIR, these project design refinements should include some combination of the following:</p> <ul style="list-style-type: none"><li>• <b>Incorporate natural creeks and open space amenities into the design of project residential neighborhoods (in keeping with GP goals and policies 2-P-26, 2-P-89, 4-G-4, 4-P-9).</b></li><li>• Maintain the general character of onsite hill forms (in keeping with GP goals 2-G-31 and 2-P-89).</li><li>• <b>Plant trees and other vegetation along West Leland Road and other project collector and arterial roadways in order to maintain the sense of “rural” open space at the City’s southern boundary (in keeping with GP policy 4-P-6).</b></li><li>• <b>Consider use of single-loaded peripheral residential streets at the southern and western edges of the project residential areas south of West Leland Road in order to encourage residential development at these outer edges to face outwards toward the rural landscape and prevent a solid wall of residential backyard fences (in keeping with GP policy 4-P-7).</b></li></ul> | Review of project plans                        | Prior to issuance of grading/building permit | City planning staff          |                            |         |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Review of project plans and field verification | Prior to resident occupancy                  | City planning staff          |                            |         |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Review of project plans                        | Prior to issuance of grading                 | City planning staff          |                            |         |

**Table 1 (cont.): Alves Ranch 3rd Addendum to the 2004 Vista Del Mar EIR Project Mitigation Monitoring and Reporting Program**

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion |         |

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Method of Verification | Timing of Verification               | Responsible for Verification | Verification of Completion |         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|--------------------------------------|------------------------------|----------------------------|---------|
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                        |                                      |                              | Date                       | Initial |
| Implementation of these improvements would involve changing the lane configuration at the intersection. Additional right-of-way acquisition would not be required. These improvements are not included in the current list of improvements to be funded by the existing City or East County traffic mitigation fee programs. The City/applicant development agreement proposed as part of this project shall include a combination of City (Traffic Mitigation Fee Program) and developer commitments that ensure that this improvement will be fully funded prior to issuance of any certificate of occupancy for any residential or commercial office space within the project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                        |                                      |                              |                            |         |
| Mitigation 7-5: The project applicants shall contribute their fair share to needed improvements at the Willow Pass Road/Avila Road intersection, as shown in Figure 7.9, that include configuring the intersection with two left-turn lanes and a right-turn lane on the westbound Avila Road approach, two left-turn lanes and a through lane on the southbound Willow Pass Road approach, and one right-turn lane and one through lane on the northbound Willow Pass Road approach. The City shall work with other affected jurisdictions to develop an interjurisdictional funding mechanism for these improvements. These improvements are not included in the current list of improvements to be funded by existing City or East County traffic impact fee programs. The City/applicant development agreement proposed as part of this project shall include a combination of City (Traffic Mitigation Fee Program), interjurisdictional (East County Subregional Impact Fee), and developer commitments that ensure that this improvement will be fully funded prior to issuance of any certificate of occupancy for any residential or commercial office space within the project. | Receipt of payment     | Prior to issuance of building permit | City planning staff          |                            |         |

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Method of Verification           | Timing of Verification               | Responsible for Verification | Verification of Completion |         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|--------------------------------------|------------------------------|----------------------------|---------|
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                  |                                      |                              | Date                       | Initial |
| <b>Mitigation 7-6:</b> The project applicants shall pay a traffic mitigation fee equal to their fair share of the improvements needed to adequately serve projected cumulative morning (AM) and evening (PM) peak hour traffic volumes at the Bailey Road/Myrtle Drive intersection in Contra Costa County and the City of Concord. These improvements include: <ul style="list-style-type: none"> <li>• installation of a traffic signal;</li> <li>• provision of a left-turn lane on the southbound Bailey Road approach; and</li> <li>• widening of the westbound Myrtle Drive approach to provide an exclusive left-turn lane.</li> </ul> | Receipt of payment               | Prior to issuance of building permit | City planning staff          |                            |         |
| <b>Mitigation 7-7:</b> As described above, the project applicants shall contribute their fair share to all applicable development impact fee programs, including the East County Regional Impact Fee, which is designed to fund improvements to regional facilities including Highway 4. However, the segment of Highway 4 between Willow Pass Road (Pittsburg) and Willow Pass Road (Concord) was improved several years ago, and no further improvements are included in the <i>Strategic Plan</i> of the East Contra Costa Regional Fee and Finance Authority.                                                                             | Receipt of payment               | Prior to issuance of building permit | City planning staff          |                            |         |
| <b>Mitigation 7-8:</b> The project shall construct bus turnouts and related transit amenities along the project frontage on West Leland Road and on internal roadways as needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Receipt of payment               | Prior to issuance of building permit | City planning staff          |                            |         |
| <b>Infrastructure and Public Services</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                  |                                      |                              |                            |         |
| <b>Mitigation 8-1.</b> As required by State SB 221, prior to City approval of a final map for the proposed project, the City of Pittsburg Community Development Department shall undertake a <i>subsequent water supply analysis</i> , which shall describe the citywide water supply situation at that future                                                                                                                                                                                                                                                                                                                                | Receipt of water supply analysis | Prior to issuance of building permit | City planning staff          |                            |         |

| <b>Mitigation 8-5. Implement mitigation measures identified in chapter 7, Traffic and Circulation, of this EIR to reduce the impacts on project-related traffic on West Leland Road and other local roads. In addition, require Police Department review and approval of project-proposed emergency access provisions prior to Tentative Subdivision Map approval.</b>                                                                                                                                                                                                                                                                                                                   | Confirmation of receipt of all fair share fees.                                                                                                 | Prior to issuance of building permit | City planning staff                             |                            |         |
| <b>Mitigation 8-8. To the satisfaction of the City, require the project applicant to comply with the park dedication requirements of chapter 17.32 of the City's Municipal Code.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Confirmation of receipt of all applicable park in-lieu fees.                                                                                    | Prior to issuance of building permit | City planning staff                             |                            |         |
| <b>Drainage and Water Quality</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                 |                                      |                                                 |                            |         |
| <b>Mitigation 9-1. Provide an onsite storm water detention facility and maintenance program sufficient to permanently reduce peak rates of runoff into the east highway culvert, in accordance with adopted design and maintenance criteria (see details below), and subject to the approval of Caltrans, the CCCFCWCD, and the City Engineer. The project east highway culvert detention basin and all discharge structures shall be dedicated to a maintenance assessment district, in which future project property owners would be responsible for the facility's long-term maintenance.</b>                                                                                         | Field verification of the improvements per the hydrology study.                                                                                 | Prior to GHAD acceptance             | City Planning Staff and Public Works Department |                            |         |
| <b>Mitigation 9-2.</b> The existing rate and volume of storm water discharges from the project site shall not be increased until the proposed downstream drainage improvements on Lines B and B-1 have been completed and it has been confirmed that project-related discharges would not worsen either the extent or duration of downstream flooding. The applicant shall prepare a hydrology study that (a) confirms that the proposed new culverts to be installed downstream of Highway 4 would have sufficient capacity to accommodate post-development flows from the project site in addition to existing and future flows from the surrounding neighborhoods, and (b) identifies | Verification of payment of all applicable fees, and field verification that all required improvements have been constructed and are operational | Prior to resident occupancy          | City Planning Staff and Public Works Department |                            |         |

**Table 1 (cont.): Alves Ranch 3rd Addendum to the 2004 Vista Del Mar EIR Project Mitigation Monitoring and Reporting Program**

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Method of Verification       | Timing of Verification              | Responsible for Verification         | Verification of Completion |         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                       |                                     |                                      | Date                       | Initial |
| <b>Mitigation 9-4.</b> To help reduce the long-term accumulation of non-point source pollutants from the project within downstream surface waters, incorporate long-term source control and pre-discharge treatment measures into the <i>Storm Water Pollution Prevention Plan (SWPPP)</i> described in <i>Mitigation 9-3</i> above, in accordance with Municipal Regional Stormwater Permit Order No. R2-2015-0049 NPDES No. CAS612008, subject to the approval by the City Engineering Division.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Review and approval of SWPPP                                          | Prior to issuance of grading permit | City planning and public works staff |                            |         |
| <b>Soils and Geology</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                       |                                     |                                      |                            |         |
| <b>Mitigation 10-1.</b> The project geotechnical engineer shall prepare a <i>subsequent final, design-level project geotechnical study</i> subject to review and approval by an independent engineering geologist retained by the City at applicant expense. The subsequent study shall evaluate if the design-level study and all of its conclusions are consistent with generally accepted geotechnical engineering practice and in agreement with the approved site development plan. The review shall include adequate consideration of project geotechnical implications for adjacent properties, including the Oak Hills, San Marco, and San Marco Meadows subdivisions. Relevant provisions of the subsequent geotechnical study shall be incorporated into project grading and site preparation plans. All earthwork and site preparation shall be performed under the direct supervision of a State-certified geotechnical engineer or engineering geologist. | Review and approval of design-level geotechnical study                | Prior to issuance of grading permit | City engineering staff               |                            |         |
| <b>Mitigation 10-4.</b> The City and its independent engineering geologist shall closely evaluate all project proposals for the construction of slopes, in particular cut slopes steeper than three-to-one, to prevent future slope failures that could damage existing homes/project improvements or require                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Review and approval of grading plans and field verification as needed | Prior to issuance of grading permit | City Engineer                        |                            |         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                       |                                                                                                         |                              | Date                       | Initial |
| slope repairs at the expense of the West Pittsburgh GHAD. If the stability of these proposed slopes can be independently confirmed, implement the construction measures recommended in the project geotechnical study. If the slopes= stability cannot be confirmed, redesign the slopes to achieve a flatter, more sustainable gradient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                       |                                                                                                         |                              |                            |         |
| <b>Mitigation 10-6.</b> Specifications for site development shall include mandatory phasing for the construction of site improvements, as recommended by the project geotechnical engineer, if settlement monitoring indicates that long-term settlement within individual fill areas could eventually exceed allowable amounts and damage or otherwise limit the usefulness of buildings or other improvements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Review and approval of grading plans and field verification as needed | Prior to issuance of grading permit                                                                     | City Engineer                |                            |         |
| <b>Mitigation 10-7.</b> In addition to the observation of all cut and fill slope construction, the project geotechnical engineer shall inspect and certify that any expansive soils underlying individual building pads and all roadway subgrades have been either removed or amended in accordance with City-approved construction specifications. If expansive soils are not fully remediated on each lot and in the area of all public and private improvements at the time of site development, the project geotechnical engineer shall make site-specific recommendations for grading, drainage installation, foundation design, the addition of soil amendments, and/or the use of imported, non-expansive fill materials, as may be required to fully mitigate the effects of weak or expansive soils and prevent future damage to project improvements. Following review and approval by the City-retained independent engineering geologist and City Engineer (see <i>Mitigation 10-1</i> ), these recommendations shall be incorporated into a report to be included with each building | field verification                                                    | During construction and prior to issuance of grading permit<br><br>Prior to issuance of building permit | City Engineer                |                            |         |

| <b>all risks and liabilities associated with the ownership of project land in the vicinity of potentially unstable slopes shall be fully explained to potential buyers at the time of purchase.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                          |                                     |                              |                            |         |
| <b>Biological Resources</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                          |                                     |                              |                            |         |
| <p><b>Mitigation 11-1.</b> The ultimate determination whether the proposed project, after implementation of the mitigations identified in this EIR, is or is not inconsistent with one or more General Plan goals or policies, would be the responsibility of City officials assigned such authority. In particular, interpretation of project consistency with City of Pittsburg General Plan policy is the ultimate responsibility of the City of Pittsburg Planning Commission and City Council. In order to comply with City of Pittsburg General Plan policies 9-P-1 and 9-P-8, the project shall incorporate the following changes and mitigations into the project:</p> <p>(1) Implement Mitigations 11-3 through 11-12 which are discussed on the following pages (see Policy 9-P-1); and</p> <p>(2) <b>Reseed cut-and-fill slopes or other graded/disturbed areas on the project site with a native herbaceous seed mix. No non-native or invasive species shall be included in the mix (see Policy 9-P-8).</b></p> <p>(3) The current preliminary version of the applicant's Mitigation and Monitoring Plan formulated for review by the resources agencies proposes preservation of approximately 3,300 linear feet of onsite drainages and onsite enhancement of approximately 1,000 linear feet of drainages.</p> <p>The City of Pittsburg shall make the above items conditions of project approval and shall not approve grading plans until the above mitigations have been incorporated into the project to City satisfaction.</p> | Verification that project plans incorporate all measures | Prior to issuance of grading permit |                              |                            |         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                       |                                     |                              | Date                       | Initial |
| During the local development review process, the City shall determine whether the applicant-proposed onsite drainage preservation program achieves project consistency with General Plan goals and policies related to creeks, or whether additional design measures are warranted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                       |                                     |                              |                            |         |
| <b>Mitigation 11-3. The City of Pittsburg shall not issue a grading permit for the project until adequate demonstration to the City that California red-legged frog issues have been resolved to the satisfaction of the USFWS. To satisfy the USFWS, the applicant will need to: (1) instruct the U.S. Army Corps of Engineers (Corps) to initiate formal consultation, pursuant to section 7 of the Federal Endangered Species Act, with the USFWS regarding the California red-legged frog; and (2) implement mitigation as necessary (see details below). A copy of a “non-jeopardy” Biological Opinion issued by the USFWS shall be submitted to the City prior to issuance of a grading permit.</b>                                                                 | Submittal of documentation demonstrating satisfaction of USFWS requirements           | Prior to issuance of grading permit | City planning staff          |                            |         |
| <b>Mitigation 11-4. The City of Pittsburg shall not issue a grading permit for the project until adequate demonstration to the City that mitigation for impacts to California tiger salamander habitat will be implemented to the satisfaction of the CDFG (and the USFWS since the species has recently been federally listed). To satisfy the CDFG and USFWS, the applicant will need to: (1) consult with the CDFG and the USFWS; and (2) redesign the project as much as possible to avoid aestivation and potential breeding habitat; or (3) where avoidance is not feasible, replace affected habitat in accordance with CDFG and USFWS requirements, and in accordance with specifications discussed in Mitigation 11-1; and (4) salvage adults and/or larvae.</b> | Submittal of documentation demonstrating satisfaction of CDFG (now CFWS) requirements | Prior to issuance of grading permit | City planning staff          |                            |         |

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Method of Verification                | Timing of Verification              | Responsible for Verification | Verification of Completion |         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|-------------------------------------|------------------------------|----------------------------|---------|
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                       |                                     |                              | Date                       | Initial |
| <b>Mitigation 11-6.</b> The applicant shall coordinate with the USFWS regarding any additional review of potential San Joaquin kit fox impacts resulting from the proposed project. Additionally, within 30 days prior to any earth-moving disturbance, a qualified kit fox biologist(s) [i.e., the biologist(s) must meet the qualifications stated in USFWS survey protocol (USFWS 1997b)] shall conduct preconstruction den surveys on the project site. These surveys shall follow the methodology outlined in Appendix 1, section 2, of USFWS 1997 survey protocol. Any potential dens identified during the preconstruction surveys shall be monitored with cameras for a minimum of three nights in accordance with the survey protocol. If kit fox or kit fox sign is identified at any time during these surveys, all work shall cease and USFWS and CDFG personnel shall be contacted immediately. | Field survey by a qualified biologist | Prior to issuance of grading permit | City planning staff          |                            |         |
| <b>Mitigation 11-7.</b> Completion of CDFG-protocol surveys for burrowing owl shall be a condition of project approval. The applicant shall retain a qualified biologist to conduct CDFG-protocol surveys for burrowing owl the year grading is proposed. If burrowing owls are found on the project site, the applicant shall be required to prepare a <i>Habitat Mitigation Plan</i> and a <i>Mitigation Agreement</i> for any burrowing owls identified. The City shall receive copies of the approved <i>Mitigation Plan</i> and <i>Mitigation Agreement</i> between the applicant and the CDFG prior to issuing a grading permit for the proposed project. All surveys and mitigation shall be coordinated by the applicant with CDFG. If such surveys demonstrate that burrowing owls do not occur on the project site, no further requirements for burrowing owls shall be required by the City.      | Field survey by a qualified biologist | Prior to issuance of grading permit | City planning staff          |                            |         |

**Table 1 (cont.): Alves Ranch 3rd Addendum to the 2004 Vista Del Mar EIR Project Mitigation Monitoring and Reporting Program**

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Method of Verification                | Timing of Verification              | Responsible for Verification | Verification of Completion |         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                        |                        |                              | Date                       | Initial |
| <p>value of the discovery and warranted mitigation measures. Such preliminary field inspection may demonstrate the need for some form of additional subsurface testing (e.g., excavation by auger, shovel, or backhoe unit). The discovery or disturbance of any significant cultural resources should be reported to the California Historical Resources Information System (CHRIS). The discovery of any Native American cultural resources shall also be reported to the Native American Heritage Commission. If a significant archaeological resource is identified through this field inspection process, the City and project proponent shall seek to avoid damaging effects to the resource. Preservation is the preferred manner of mitigating impacts to an archaeological site. When in-place mitigation is determined by the City to be infeasible, a mitigation program, including measures set forth in sections 15064.4 and 15126.4 of the CEQA Guidelines, shall be implemented. Specifically, a <i>data recovery plan</i>, which makes provisions for adequate recovery of the scientifically consequential information about the site, shall be prepared prior to any additional excavation being undertaken. The plan shall be submitted to the California Historical Resources Regional Information Center (i.e., the NWIC at Sonoma State University). If Native American artifacts are indicated, the plan shall also be submitted to the Native American Heritage Commission (NHAC). Identified cultural resources should be recorded on State Department of Parks and Recreation form DPR 422 (archaeological sites). The data recovery plan should be finalized as necessary to incorporate any mitigation additions or revisions recommended by these two groups and/or required by the City. If human remains are found, special rules set forth in State Health and Safety Code section 7050.5 and <i>CEQA Guidelines</i> section 15126.4(b) shall apply.</p> |                        |                        |                              |                            |         |

**Table 1 (cont.): Alves Ranch 3rd Addendum to the 2004 Vista Del Mar EIR Project Mitigation Monitoring and Reporting Program**

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion |         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                        |                        |                              | Date                       | Initial |
| <p>The identified mitigations shall be undertaken to City satisfaction, if necessary, prior to resumption of grading activities.</p> <p>A <i>data recovery plan</i> and data recovery shall not be required if the City determines that testing or studies already completed have adequately recovered the necessary data, provided that the data are available for review at the California Historical Resource Regional Information Center [CEQA Guidelines section 15126.4(b)].</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                        |                        |                              |                            |         |
| <p><b>Mitigation 12-2.</b> The Applicant shall hire a qualified archaeologist or architectural historian to conduct a historical resources survey HRS for all on site ranch structures which appear to be over 45 years old, meeting the requirements of section 50241(g) of the State Public Resources Code. Further mitigation shall not be required if the City accepts an HRS finding that none of the existing on-site ranch structures is a significant historic resource as defined in CEQA Guidelines section 15064.5(a). For any project action that may cause a substantial adverse change in one or more HRS-identified potentially significant historic resources the applicant shall incorporate measures that would seek to improve the affected historic resource in accordance with either of the following publications:</p> <ul style="list-style-type: none"> <li>• Secretary of Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving Rehabilitating Restoring and Reconstructing Historic Buildings, or</li> <li>• Secretary of Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings.</li> </ul> |                        |                        |                              |                            |         |

Table 1 (cont.): Alves Ranch 3rd Addendum to the 2004 Vista Del Mar EIR Project Mitigation Monitoring and Reporting Program

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Method of Verification                                                                                     | Timing of Verification               | Responsible for Verification         | Verification of Completion |         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|--------------------------------------|--------------------------------------|----------------------------|---------|
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                            |                                      |                                      | Date                       | Initial |
| Noise                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                            |                                      |                                      |                            |         |
| Mitigation 14-1. Implement the following:<br><b>(a) Acoustical Study.</b> Conduct an <i>acoustical study</i> in accordance with state Title 24 requirements that identifies to City satisfaction the noise insulation and other features to be included in the design of the project residential structures in the vicinity of Highway 4 and along West Leland Road sufficient to maintain interior noise levels at or below City and State standards (45 L <sub>dn</sub> ). | Submittal of acoustical study and verification that required measures are incorporated into project plans. | Prior to issuance of building permit | City planning staff                  |                            |         |
| <b>(b) Site Design Measures.</b> Design common outdoor use areas in the residential portions of the project to maintain exterior noise levels to “normally acceptable” levels. These areas shall be situated away from predominant noise sources or should be shielded by natural or created topographical features, barriers, or the buildings themselves.                                                                                                                  | Field verification to confirm construction of required measures                                            | Prior to resident occupancy          | City building inspector              |                            |         |
| <b>(c) Noise Barrier.</b> Construct a noise barrier for residences proposed adjacent to West Leland Road. The noise barrier should extend approximately five to ten feet above the pad elevations to reduce traffic-generated noise levels to 60 dBA L <sub>dn</sub> . The barrier shall take the form of a wall, berm, and/or structures that shield the outdoor use areas of the first row of residences north and south of West Leland Road.                              |                                                                                                            |                                      |                                      |                            |         |
| Mitigation 14-3. Reduce project construction period noise impacts on nearby residences by incorporating conditions in project construction agreements that, <u>in addition to the applicable construction schedule requirements of the City of Pittsburgh General Plan</u> (limit noise-generating construction activities adjacent to existing developments to normal                                                                                                       | Field verification to ensure that measures are being implemented                                           | During construction                  | City Grading and Building Inspectors |                            |         |

Table 1 (cont.): Alves Ranch 3rd Addendum to the 2004 Vista Del Mar EIR Project Mitigation Monitoring and Reporting Program

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Method of Verification | Timing of Verification | Responsible for Verification | Verification of Completion |         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                        |                        |                              | Date                       | Initial |
| <p>business hours between 8:00 AM and 5:00 PM), and the City's Standard Conditions of Approval regarding construction logistics, stipulate the following conventional construction period noise abatement measures:</p> <ul style="list-style-type: none"> <li>• <b>Construction Equipment Mufflers and Maintenance.</b> Properly muffle and maintain all construction equipment powered by internal combustion engines.</li> <li>• <b>Idling Prohibitions.</b> Prohibit unnecessary idling of internal combustion engines.</li> <li>• <b>Equipment Location and Shielding.</b> Locate all stationary noise-generating construction equipment such as air compressors as far as practical from the existing nearby school and residences.</li> <li>• <b>Quiet Equipment Selection.</b> Select quiet construction equipment, particularly air compressors, whenever possible. (Fit motorized equipment with proper mufflers in good working order.)</li> <li>• <b>Noise Disturbance Coordinator.</b> Designate a "noise disturbance coordinator" (e.g., a City staff member) who would be responsible for responding to any local complaints about construction noise. The disturbance coordinator would determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and institute reasonable measures warranted to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site.</li> <li>• <b>Truck Routes.</b> Route all construction traffic to and from the project site via designated truck routes where practical. Prohibit construction-related heavy truck traffic in residential areas where feasible.</li> </ul> |                        |                        |                              |                            |         |

**Table 1 (cont.): Alves Ranch 3rd Addendum to the 2004 Vista Del Mar EIR Project Mitigation Monitoring and Reporting Program**

| Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Method of Verification                                           | Timing of Verification | Responsible for Verification        | Verification of Completion |         |

**Exhibit B of Resolution No. 10102  
Planned Development (PD) Plan**

---

**Land Use Regulations**

- A. The land uses allowed within Lots 1-346 as shown on Vesting Tentative Map (VTM) 9235 shall be the same as those allowed in the RS-4 (Single-Family Residential) District (Pittsburg Municipal Code [PMC] Chapter 18.50).
- B. The land uses allowed on Lots A-Q (with the exception of 'Lot H' and 'Lot M') as shown on VTM 9235 shall be limited to those uses identified on VTM 9235 and the approved project plans. All parcels identified as either 'Streets' or 'Alleys' on VTM 9235 shall be limited to use as a public or private street, alley, or driveway, as defined within the PMC.
- C. The land uses allowed within the area identified as 'Lot H' and 'Lot M' on VTM 9235 shall be as follows:

P = Permitted  
U = Use Permit, Planning Commission  
T = Temporary Activity Permit  
L = Limited (See Additional Use Regulations)  
Z = Use Permit, Zoning Administrator  
– = Not Permitted

| Residential                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Exhibit B of Resolution No. 10102  
Planned Development (PD) Plan**

---

**Development Regulations.**

- A. Except as indicated below or expressly indicated within the approved development plan, all development regulations of the residential portions of the PD District shall be the same as those of the RM (Medium Density Residential) District. Use and development of the property shall also comply with Article 3 (Performance Standards) and Article 5 (Home Occupations) of PMC Chapter 18.50, and with the off-street parking requirements of PMC Chapter 18.78. The development regulations below shall not apply to non-residential parcels.

| <b>Residential Neighborhood A-1 and A-2 (Duets)</b>     |                               |
|---------------------------------------------------------|-------------------------------|
| Minimum Lot Area                                        | 1,600 square feet             |
| Minimum Lot Width                                       | 27 feet                       |
| Minimum Front Yard Setback (fronting private "street")* | 10 feet                       |
| Minimum Front Yard Porch Setback*                       | 6 feet                        |
| Minimum Front Building-to-Building Separation (Paseo)   | 15 feet                       |
| Minimum Side Yard Setback (unattached side)             | 5 feet                        |
| Minimum Corner Side Yard Setback                        | 8 feet                        |
| Minimum Rear Yard Setback (at garage elevation)         | 4 feet                        |
| Maximum Lot Coverage                                    | Per approved development plan |
| Maximum Building Height                                 | 30 feet                       |
| Minimum Private Storage Area                            | --                            |
| Minimum Private Open Space                              | ----                          |

\* Front yard setbacks shall be measured from the lot line directly adjacent to the main entry of the primary dwelling unit. Permitted building projections into yards pursuant to PMC section 18.80.010.

| <b>Residential Neighborhood C (Single Family)</b>       |                               |
|---------------------------------------------------------|-------------------------------|
| Minimum Lot Area                                        | 2,000 square feet             |
| Minimum Lot Width                                       | 30 feet                       |
| Minimum Front Yard Setback (fronting private "street")* | 10 feet                       |
| Minimum Front Yard Porch Setback*                       | 6 feet                        |
| Minimum Front Building-to-Building Separation (Paseo)   | 20 feet                       |
| Minimum Side Yard Setback                               | 4 feet                        |
| Minimum Corner Side Yard Setback                        | 8 feet                        |
| Minimum Corner Street Return Setback                    | 4 feet                        |
| Minimum Rear Yard Setback (at garage elevation)         | 4 feet                        |
| Maximum Lot Coverage                                    | Per approved development plan |
| Maximum Building Height                                 | 30 feet                       |

\* Front yard setbacks shall be measured from the lot line directly adjacent to the main entry of the primary dwelling unit. Permitted building projections into yards pursuant to PMC section 18.80.010.

|                                     |                               |
|-------------------------------------|-------------------------------|
| Minimum Lot Area                    | 2,000 square feet             |
| Minimum Lot Width                   | 30 feet                       |
| Minimum Front Yard Setback*         | 5 feet                        |
| Minimum Front Yard Porch Setback*   | 4 feet                        |
| Minimum Side Yard Setback           | 4 feet                        |
| Minimum Corner Side Yard Setback    | 5 feet                        |
| Minimum Rear Yard Setback           | 5 feet                        |
| Minimum Setback at Garage Elevation | 5 feet                        |
| Maximum Lot Coverage                | Per approved development plan |
| Maximum Building Height             | 30 feet                       |

\* Front yard setbacks shall be measured from the lot line directly adjacent to the main entry of the primary dwelling unit. Permitted building projections into yards pursuant to PMC section 18.80.010.

- B. The development regulations for the area identified as 'Lot H' and 'Lot M' as shown on VTM 9235, shall be as shown in the table below. All standards not noted below shall revert to the standards applicable to the CO (Office Commercial) District, as specified within the PMC.

|                                      |       |
|--------------------------------------|-------|
|                                      |       |
| Minimum lot area (sq. ft.)           | 5,000 |
| Minimum lot width (ft.)              | 50    |
| Minimum yards (ft.)                  |       |
| Front*                               | 20    |
| Side                                 | 5     |
| Side (adjacent to residential use)   | 10    |
| Corner Side                          | 15    |
| Rear                                 | 10    |
| Rear (adjacent to residential use)   | 10    |
| Maximum height of structure(s) (ft.) | 35    |
| Maximum lot coverage                 | 50%   |
| Maximum floor-area-ratio (FAR)       | 0.5   |
| Minimum site landscaping             | 10%   |

\* For purposes of calculating setbacks, the front lot line of "Lot H" shall be measured from the property line adjacent to West Leland Road.

BEFORE THE CITY COUNCIL OF THE CITY OF PITTSBURG

The Pittsburg City Council DOES RESOLVE as follows:

WHEREAS, on June 18, 2018, Mandy Leung of William Lyon Homes, Inc., filed Planning Application No. AP-18-1348, requesting approval of: 1) a zoning map amendment rezoning the site from a combination of RH-P (High Density Residential with a Master Plan Overlay) and CO-P (Office Commercial with a Master Plan Overlay) Districts to PD (Planned Development) District; 2) a vesting tentative map subdividing the 57.81-acre site to allow for the construction of a 346-unit, single family development as well as a 12-acre commercial site; and 3) design review of architectural and landscape plans. The project site is located along the north side of West Leland Road, south of State Route 4. Assessor's Parcel Nos. 097-700-001; 097-700-002; and 097-700-005; and

WHEREAS, the proposed project is governed by the applicable goals and policies of the Pittsburg General Plan, the Pittsburg Municipal Code (PMC), and the City's adopted Design Review and Development Guidelines (DRDGs; Planning Commission Resolution No. 9864); and

WHEREAS, on January 20, 2009, the City Council adopted Ordinance No. 08-1312, approving the Alves Ranch Master Plan and an EIR addendum. The previously approved master plan contemplated up to 560 residential units, as well as up to 14 acres of office commercial space; and

WHEREAS, since adoption of the Alves Ranch Master Plan, the project proposal for the site has been further refined based on current market conditions, as well as the desire of residents for additional retail commercial opportunities within the area of the City west of Bailey Road; and

WHEREAS, on November 7, 2017, the proposed project was discussed by the Land Use Subcommittee. The Subcommittee was generally supportive of the modifications and amendment to the previous affordable housing requirement specified within the Development Agreement in exchange for reduced density, a parcel sized and zoned to provide for a successful commercial development that would provide retail opportunities for the surrounding neighborhoods, and prioritization of development of the commercial portion of the project; and

WHEREAS, pursuant to PMC section 17.16.100, an applicant may request that two or more applications for separate discretionary approvals, requested or required in conjunction with a project be consolidated; and

WHEREAS, pursuant to PMC section 17.20.060(c), the City Council, upon recommendation of the Planning Commission, may approve a tentative map if it finds that: a) the proposed map is consistent with the general plan and any applicable specific plan, or other applicable provision of the PMC; b) the site is physically suitable for the type of development; c) the site is physically suitable for the proposed density of development; d) the design of the subdivision or the proposed improvements will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat; e) the design of the subdivision or the proposed improvements will not cause serious health problems; and f) the design of the subdivision or the type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed subdivision; and

WHEREAS, pursuant to PMC section 18.36.230, the City Council, upon recommendation of the Planning Commission, may grant design review approval if it finds that: a) the structure conforms with good taste, good design and in general contributes to the character and image of the City as a place of beauty, spaciousness, balance, taste, fitness, broad vistas, and high quality; b) the structure will be protected against exterior and interior noise, vibrations and other factors that may tend to make the environment less desirable; c) the exterior design and appearance of the structure is not of inferior quality as to cause the nature of the neighborhood to materially depreciate in appearance and value; d) the structure is in harmony with proposed developments on land in the general area; and e) the application conforms with the criteria set forth in any applicable City adopted design guidelines; and

WHEREAS, an Environmental Impact Report (EIR) was previously prepared for the Vista Del Mar project, which included a programmatic plan for the Alves Ranch site. On October 18, 2004, the City Council adopted Resolution No. 04-10168 certifying that the Final Environmental Impact Report (FEIR) for the Vista Del Mar project (SCH # 2004012097) was prepared in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines. On November 29, 2004, after having reviewed and considered the environmental documentation prepared for the Vista Del Mar project, the Council adopted Resolution No. 04-10191 approving CEQA findings, adopting a Statement of Overriding Considerations, and a Mitigation and Monitoring and Reporting Program (MMRP) for the Vista Del Mar project; and

WHEREAS, section 15162(a) of the CEQA Guidelines states that when an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines that, either: 1) the project proposes substantial changes which would present a new significant impact; 2) there are substantial changes with respect to the circumstances under which the project is undertaken that would present a new significant impact; or 3) there is new information available that was not previously available relating to new or previously identified

significant impacts; and

WHEREAS, since the project proposal for the Alves Ranch site has been further refined from what was originally reviewed in the 2004 EIR (as described above), and since no new significant impacts were found, preparation of an Addendum to the 2004 EIR pursuant to CEQA Guidelines section 15164 (Addendum to an EIR or Negative Declaration) is the appropriate method for achieving CEQA compliance for the current project; and

WHEREAS, on August 21, 2018, after conducting a duly noticed public hearing, the Planning Commission adopted Resolution No. 10102, recommending approval the requested zoning map amendment; and

WHEREAS, on or prior to August 25, 2018, in accordance with Government Code sections 65090 and 65091, and PMC section 18.14.020.B and D, a "Notice of Public Hearing," for the September 4, 2018, public hearing on this item was published in the East County Times; was posted at City Hall; was delivered for posting at the Pittsburg Library; and was mailed via first class or electronic mail to the applicant, to the property owner, to owners of property located within 300 feet of the proposed project site, to local service agencies whose services might be affected by this project, and to individuals who had previously filed written request for such notice; and

WHEREAS, on September 4, 2018, the City Council held a duly-noticed public hearing to: 1) introduce and waive further reading of this ordinance approving the proposed zoning map amendment and Environmental Impact Report Addendum; and 2) adopt resolution approving the proposed vesting tentative map and design review, at which time oral and/or written testimony was considered.

#### Section 1. Authority

- A. Article XI, Section 7 of the California Constitution confers on cities the authority to regulate land use within their jurisdictions under the police power and to make and enforce ordinances to protect the public health, safety and welfare. Aesthetic reasons alone justify exercise of the police power (*Metromedia, Inc. vs. City of San Diego* [1980] 264 C3d 848, 164 CR 510).
- B. The general plan is the single most important planning document and represents the most comprehensive statement of the city's interests and welfare (Government Code section 65300; *Citizens of Goleta Valley vs. Board of Supervisors* [1990] 52 CA3d 553, 276 CR 410). In general, all land use decisions must be consistent with the general plan. Consistency exists between a city's land use action and the general plan when a city has officially adopted such a plan, and the various land uses approved are compatible with the objectives, policies, general land uses and programs specified in the plan (*Leshar Communications, Inc. vs. City of Walnut Creek* [1990] 52 C3d 531, 277 CR1).

- C. The Subdivision Map Act (Government Code section 66410, et seq.) vests in cities the power to regulate and control the design and improvement of subdivisions within their boundaries (Government Code section 66411). "Improvement" is broadly defined to include any specific improvement or type of improvement, the installation of which is necessary to ensure consistency with the general plan (Government Code section 66419[b]).
- D. A city may not approve a tentative map unless it finds that the proposed subdivision, together with the provisions of its design and improvement, is consistent with the general plan (Government Code section 66473.5). The approximate western half of the site is designated 'Business Commercial', while the approximate eastern half is designated 'High Density Residential.' The 'Business Commercial' designation is intended to provide sites for administrative, financial, business, professional, medical, research and development, and public offices, as well as custom manufacturing, limited assembly, light manufacturing, warehousing and distribution, and support commercial uses. It also allows mixed-use development with a maximum floor-to-area-ratio (FAR) of 1.0. While the General Plan states limits on retail activities will be specified in the Zoning Ordinance, no limitations or complementary zoning districts are specified. The 'High Density Residential' designation is intended to provide sites for residential development with a density of 14 to 25 units per acre. A wide range of housing types, from single-family attached units to multi-family complexes are permitted
- E. Pittsburg's General Plan includes, among its objectives: maintaining a compact urban form (Goal 2-G-1); promoting a diversity of housing types, including opportunities for smaller lot, infill, and high-density housing (Goal 2-G-5, 3-G-10 and 13-G-1); flexibility and diversity in land use arrangements (Goal 2-G-7); managing the City's growth to balance development of housing options and job opportunities (Goal 3-G-1); providing a range of development intensities, with the highest intensities in areas approximate to transit and services (Goal 3-G-3); provision of new and improved pedestrian, bicycle and transit facilities to serve all users of new development projects (Goal 3-G-9); establishing the City's BART Stations as regional focal points, surrounded by a mix of urban activities and services (Goal 4-G-16); and economic development priorities and targeted investments to facilitate expansion, retention and attraction of businesses that meet the City's economic development objectives (Goal 6-G-2). To ensure that these goals are met, the General Plan supports:
1. Development of innovatively-designed, small-lot housing on infill sites in the City (General Plan policies 2-P-16, 5-P-21, and 13-P-1.1.E). The proposed project would foster development of 346 single-family residences within one-half mile radius of the 'Pittsburg/Bay Point' BART station, helping the City increase potential ridership. Further, the project is an innovative, small-lot housing project that will provide safer, quieter and more pedestrian friendly alternatives to traditional cul-de-sac neighborhoods.

2. Planned developments that incorporate high-quality designs and community amenities, such as recreational facilities and streetscaping (General Plan policies 2-P-5 and 2-P-6). For consistency with these policies, the applicant has designed the subdivision to include a recreation area complete with bocce and basketball courts, as well as a dog park, Class I pathways, and other various open spaces.
3. Development of small lot single-family infill developments suitable for moderate-income households (Housing Element policy 13-P-1.3 and program 13-P-2.4). The proposed subdivision will allow a small-lot single-family development of 346 detached units, including single-family attached units, rear-loaded garage units, and traditional detached units, and will, by design, be suitable for moderate-income households.
4. Provision of affordable housing. This project will be subject to a development agreement that will obligate the developer to construct ten (10) accessory dwelling units which may be made available for rent to low-income households (Housing Element policy 13-P-1.5). In addition to providing affordable housing and helping the City to meet its fair share regional affordable housing needs (Housing Element policy 13-P-1.6), the proposed development will implement Housing Element program 13-P-1.1.E, which lends support of the use of Planned Development zoning for projects when utilized to accommodate innovative site plans aimed at preserving open space, new recreational opportunities, and/or the supply of affordable housing.
5. Construction of new parks, dedication of land for new parks, or payment of fees to help the City meet its park and recreation facility standards (General Plan policies 8-P-1, 8-P-2, 8-P-11). For consistency with these policies, the applicant has designed the subdivision to include a recreation area for residents complete with a bocce and basketball court. Additionally, the applicant will be required to pay Parkland Dedication In-lieu Fees.

## Section 2. Findings

- A. Based on the City Council staff report entitled, "Introduction and Waive First Reading of an Ordinance and Consideration of a Resolution Approving the Alves Ranch Project, AP-18-1348 (RZ, SUBD, DR)," dated September 4, 2018, and based on all the information contained in the Planning Division files on the project, incorporated herein by reference and available for review in the Planning Division located at 65 Civic Avenue in Pittsburg, and based on all written and oral testimony presented at the public hearing, the City Council finds that:
  1. All recitals above are true and correct and are incorporated herein by reference.

2. Since the project proposal for the Alves Ranch site has been further refined from what was originally reviewed in the 2004 EIR (as described above), preparation of an Addendum to the 2004 EIR pursuant to CEQA Guidelines section 15164 (“Addendum to an EIR or Negative Declaration”) is the appropriate method for achieving CEQA compliance for the current project.

Vesting Tentative Map:

3. The proposed vesting tentative subdivision map is consistent with the proposed General Plan, in that:
  - a. The project will be developed on an infill site, thereby helping the City maintain a compact urban (Goal 2-G-1).
  - b. The project will provide higher-density single-family residential and commercial opportunities in an area accessible to transit and services (Goal 2-G-4 and 3-G-3). The project site is within a half-mile distance of the Pittsburg/Bay Point BART Station and adjacent to a bus stop located along the southern property boundary.
  - c. The project will expand Pittsburg’s housing diversity by providing higher-density single-family development on smaller lots ranging from approximately 1,600 to over 4,000 square feet (Goal 2-G-5 and Housing Goal G-1).
  - d. The project will utilize a Planned Development (PD) zoning, in part, to achieve a high-quality design outcome (Policy 2-P-5).
  - e. The project will provide a recreation area complete with bocce and basketball courts, as well as a dog park, as community amenities within the planned development (Policy 2-P-6).
  - f. The project will pay its share of the costs for the construction of facilities needed to serve the development (Policy 3-P-1, 3-P-13, and 7-P-2). It will comply with conditions of approval requiring payment of the Facilities Reserve Charge, Local Traffic Mitigation Fee (LTMF), and Regional Transportation Development Impact Mitigation Fee (RT-DIM) in accordance with the Pittsburg Municipal Code, as well as a “fair share” of fees for roadway improvements as identified in the 2004 Vista Del Mar EIR.
  - g. The project will be built in an area where public facilities and infrastructure are already available (Policy 3-P-1).

- h. The existing transportation system has adequate capacity to accommodate the proposed development (Policy 3-P-2). Residents of the proposed development will have multiple transportation options available to them as the site is located near BART, Tri-Delta Transit, and bicycle lanes.
- i. The project will provide safe and contiguous routes for pedestrians and bicyclists (Policy 3-P-17, 7-P-34, and 7-P-40). There is an existing Class II bicycle lane along West Leland Road, and the project will include Class I bicycle and pedestrian facilities to encourage walking, bicycling, and transit use.
- j. The project will encourage walking as a regular means of transportation due to the site's proximity to various amenities (Goal 7-G-15). The project site is within a half-mile distance of Ray Giacomelli Park, a future Mt. Diablo Unified school site, the Pittsburg/Bay Point BART Station, and potential future commercial development.
- k. The project will provide bicycle racks in each garage for secure bicycle parking (Policy 7-P-45).
- l. The project will be required to pay an In-Lieu Parkland Dedication Fee in accordance with PMC section 17.32.020.D.2 (Policy 8-P-1, 8-P-5, and 8-P-16).
- m. The project will provide a recreation area that is centrally located and within reasonable walking distance of all homes in the subdivision (Policy 8-P-2).
- n. The project will equitably share the costs associated with providing water and wastewater services to the subdivision through payment of the Pittsburg Facilities Reserve Charge (Policy 11-P-7 and 11-P-18).
- o. The project will provide sound walls along the entire site perimeter and will also comply with mitigation measures intended to ensure interior noise levels do not exceed 45 dB CNEL (Policy 12-P-6).
- p. The project site being rezoned is vacant, underutilized, and deemed appropriate for higher-density residential use given its proximity to schools, parks, and transit, as well as proposed commercial opportunities (Housing Element Policy P-1.1 B).
- q. The project will provide market-rate housing and increase demand for economic activity in nearby shopping centers (Housing Policy P-

1.2).

- r. Pursuant to the development agreement, the project will provide at least ten single-family homes with accessory dwelling units that would allow extended families to live near each other, increase the affordable and rental housing stock, and provide income assistance to homeowners (Housing Policy P-1.5).
  - s. The project will help attain the City's Regional Housing Needs Allocation for moderate and above-moderate income households (Policy P-1.6).
  - t. The project will comply with conditions of approval requiring construction of quality home designs to ensure future residents will enjoy an attractive living environment (Housing Goal G-5 and Policy P-5.1).
- 4. The project site is physically suitable for the type of development proposed in that the site is relatively flat, vacant, and surrounded by existing infrastructure, minimizing the amount of work and investment needed to extend utilities and services to the site.
  - 5. The project site is physically suitable for the proposed density of development, in that the site is flat, vacant, and surrounded by existing, established development. Further, the site is located within one-half mile of the Pittsburg/Bay Point BART Station and adjacent to two existing bus routes, making it an appropriate location for a high-density residential development, as defined by the City's General Plan.
  - 6. The design of the proposed subdivision and accompanying improvements will not cause substantial environmental damage or substantially and unavoidably injure fish or wildlife or their habitat, in that the project will comply with the applicable mitigation measures identified in the 2004 Vista Del Mar EIR (SCH # 2004012097).
  - 7. The design of the subdivision and type of improvements proposed will not cause serious public health problems. Site improvements have been, or shall be required to be, designed to meet City standards, as detailed in the conditions of approval. The residential project does not involve heavy manufacturing or other industrial uses that might generate high levels of pollution emissions and the site is not located in close proximity to any stationary source polluters.
  - 8. The design of the subdivision and type of improvements will not conflict with easements, acquired by the public at large, for access through or use of the property within the proposed subdivision, in that there are no

existing public access easements on the site. The proposed map does include a new public street that will connect the development to existing public roadways, and the new street will be of sufficient width to accommodate automobile and emergency vehicle access into and around the site.

Design Review:

9. The proposed project conforms with good taste, good design and in general contributes to the character and image of the City as a place of beauty, spaciousness, balance, taste, fitness, broad vistas, and high quality, in that the proposed house models feature an attractive architectural design characterized by a mixture of hipped and gable-end roofs with high-quality, composite shingle roofing material; stucco siding with horizontal trim, corbels, and simulated stone veneer; and articulated front porch entryways. The proposed project will also provide an attractive outdoor environment for residents. The developer will install a variety of colorful, drought-tolerant landscaping within common areas and outside of homes, and a condition of approval will require a decorative, masonry sound wall with wall caps designed to mimic the existing sound wall along the south side of West Leland Road, adjacent to the Vista Del Mar project. Residential front yards will feature drought-tolerant plants and blooming street trees that will provide seasonal color throughout the subdivision.
10. The proposed project will be protected against exterior and interior noise, vibrations and other factors which may tend to make the environment less desirable, in that the project will be built to standard building codes that dictate maximum noise levels for the interiors of residential units. The developer will also be required to install a sound wall along the northern or southern property lines of residential lots nearest West Leland Road or State Route 4, as applicable.
11. The exterior design of the proposed project is not of inferior quality as to cause the nature of the neighborhood to materially depreciate in appearance and value. Rather, the proposed project will enhance the neighborhood's appearance and value, in that it will result in a highly attractive environment utilizing a variety of compatible house and front yard landscape designs. The Alves Ranch Project will add value to the community by attracting additional residential and commercial investment in the area.
12. The proposed project is in harmony with proposed developments on land in the general area, in that the home designs are intended to complement the existing Vista Del Mar project to the south.
13. The proposed project will substantially conform to the applicable

Development Review Design Guidelines (DRDG, Planning Commission Resolution No. 9864) for single-family development if conditions are added requiring the developer to: a) provide split face block walls with pilasters at intervals of 25 feet or less along West Leland Road; b) provide screening for utility boxes, transformers, backflow preventers, meters, and junction boxes; c) provide, as part of the options package for homebuyers, solar panels or an option offering pre-wiring for solar panels; d) proposed landscaping be required to meet the standards set forth in PMC Section 18.84.310; and e) provide cool roofs for reduction of heat island effect or installation of solar panels, consistent with DRDG sections 1.c, 2.b through 2.d, 2h, and 6.A.1 through 6.A.2, 6.A.4, and 6.A.6.

- B. The City Council Staff Report entitled, "Introduction and Waive First Reading of an Ordinance and Consideration of a Resolution Approving the Alves Ranch Project, AP-18-1348 (RZ, SUBD, DR)," dated September 4, 2018, is referenced hereto as additional support for findings.

### Section 3. Decision

Based on the findings and the authority set forth above, the City Council hereby approves Vesting Tentative Map 9235 and design review for plans construct 346 single-family detached homes and ancillary features, subject to the conditions as presented in Exhibit A of this resolution.

### Section 4. The Conditions Imposed Substantially Advance a Legitimate Governmental Interest and are Roughly Proportional to the Burdens Created by the Subdivision.

- A. In the case of *Dolan vs. City of Tigard* (1994) 114 S.Ct. 2309, the United States Supreme Court expanded on the findings a local agency must make when it imposes a condition on development which constitutes a taking of a possessory interest in real property. To withstand constitutional challenge, Dolan requires the agency show that the condition substantially advances a legitimate governmental interest and does not deny an owner economically viable use of his property. Additionally, the agency must demonstrate that the benefits from the condition are roughly proportional to the burdens created by the project.
- B. The City has a legitimate governmental interest in ensuring that the City, school districts including the Mt. Diablo Unified School District (MDUSD), utility districts including Delta Diablo Sanitation District (DDSD) and Contra Costa Water District (CCWD), and emergency services providers including the Contra Costa County Fire Protection District (CCCFPD) receive adequate funding to ensure that their facilities and services may be expanded, improved or upgraded in accordance with demands created by new development. General Plan policies have been designed to require developers to pay their fair share costs to fund the increase in demand for services or facilities that their projects create, in order to ensure that development "pays its own way," and do not divert, to a specific project-

related improvement, general revenue funds that will otherwise benefit residents citywide.

Section 5. The Improvements are Reasonably Necessary to Meet the Needs of the Public Arising as a Result of the Subdivision

An improvement imposed as a condition of approval of a tentative map is valid to the extent that it is not excessive. An improvement is not considered excessive if it is reasonably necessary to meet public needs arising as a result of the subdivision. (Government Code section 66465.4 (a), (b).) As an additional finding, the City Council hereby finds that the improvements and requirements described in section 3, above, are reasonably necessary to meet the needs of the public arising as a result of the Alves Ranch Development, as further described in sections 2, 3, and 4 of this resolution.

Section 6. Effective Date

This resolution shall take effect immediately upon the effective date of City Council Ordinance No.18-\_\_\_\_, approving the zoning map amendment and Environmental Impact Report Addendum for the site.

Section 7. Adoption

PASSED AND ADOPTED by the City Council of the City of Pittsburg at a regular meeting on the 4<sup>th</sup> day of September 2018, by the following vote:

AYES:

NOES:

ABSTAINED:

ABSENT:

ATTEST:

---

**Exhibit C of Resolution No. 10102**  
**Conditions of Approval**

---

General Conditions:

1. The project shall be constructed in substantial conformity with the Vesting Tentative Map and Master Plan, date stamped July 23, 2018, except as hereinafter may be modified. Any major changes to the project plans shall be subject to review and approval by the Planning Commission at the City Planner's discretion. Minor Deviations from the approved Vesting Tentative Map and Master Plan may be approved by the City Planner. In the event there is found to be a conflict between the Vesting Tentative Map and Master Plan, final design shall be subject to review and approval by the City Planner.
2. Final plot plans shall be in substantial conformity with the approved Master Plan. Minor plot plan rearrangements may be made subject to review and approval by the Planning Division. Final plot plans shall not result in two side by side lots having the same plan, elevations, and color adjacent to each other. Developer plans reflect that there are:
  1. Three plan types, three elevation styles for each plan and 12 color schemes for Neighborhood C;
  2. Three plan types, three elevation styles for each plan and 12 color schemes for Neighborhood D1 & D2; and
  3. Two plan types, three elevation styles for each plan and 12 color schemes for Neighborhood A1 & A2.
3. The developer shall comply with all applicable requirements of Title 18, "Zoning," of the Pittsburgh Municipal Code (PMC) as applicable to the project, unless otherwise specified within the City Council Ordinance rezoning the property.
4. Prior to issuance of a building permit, the developer shall record the 2018 Amendment to the Development Agreement, which has been placed in an escrow account.
5. To the extent that the terms of any development agreement approved by the City Council are in conflict with the conditions of this Vesting Tentative Map approval, the provisions of the Development Agreement shall prevail.

Mitigation Measures:

6. The developer shall comply with all applicable Mitigation Measures (MM) identified within the Environmental Impact Report (EIR) certified by the City Council on October 18, 2004, and the Third Addendum to the EIR, adopted by the City Council on September 17, 2018, including but not limited to the following:
  - A. In accordance with MM 5-1, in order to minimize the degree of project-specific adverse impact on the visual character and quality of the project

site, the developer shall use irregular planting on graded slopes to achieve a natural appearance.

- B. In accordance with MM 5-2, in order to minimize the degree of project-specific adverse impact on the visual character and quality of the project site, the developer shall ensure that adequate landscaping is placed along the outer edge (northern side) of the SR 4 sound wall.
- C. In accordance with MM 7-1, the developer shall contribute their fair share to the needed improvements at the Willow Pass Road/San Marco Boulevard/State Route 4 Eastbound ramps intersection, which include the following:
  - (1) Re-striping of the southbound approach to reduce the lane configuration to one through lane, which creates an opportunity for a free right-turn at the eastbound off-ramp; and
  - (2) Creation of a free right-turn lane on the eastbound off-ramp, in addition to two dedicated left-turn lanes for a total of three approach left-turn lanes on the off-ramp.
- D. In accordance with MM 7-2, the project applicant shall pay their fair share contribution towards any of these improvements deemed feasible by the City:
  - (1) Create a westbound shared through/right-turn lane on West Leland Road;
  - (2) Create a second eastbound Left-turn lane on West Leland Road;
  - (3) Create a second eastbound through lane on West Leland Road; and
  - (4) Create an exclusive eastbound right-turn lane on West Leland Road.
- E. In accordance with MM 7-3, the developer shall pay a traffic mitigation fee equal to their fair share of the improvements needed to adequately serve projected cumulative morning (AM) and evening (PM) peak hour traffic volumes at the Bailey Road/Concord Boulevard intersection in the City of Concord. These improvements include:
  - (1) Construction of exclusive right-turn and left-turn lanes and a second through lane on the northbound approach;
  - (2) Construction of two exclusive left-turn lanes on the southbound approach; and
  - (3) Construction of a third through lane on both the eastbound and westbound approaches.

This fee shall be paid prior to recordation of a project final map, in an amount determined by the City Council in cooperation with the affected jurisdiction.

- F. In accordance with MM 7-4, The project applicants shall contribute their fair share to the following needed improvements at the San Marco Boulevard/West Leland Road intersection:
  - (1) Convert the northbound shared through/right turn lane to an exclusive right turn lane; and
  - (2) Convert one of the northbound left-turn lanes to a northbound through lane.
- G. In accordance with MM 7-5, the developer shall contribute their fair-share to needed improvements at the Willow Pass Road/Avila Road intersection with two left-turn lanes and a right-turn lane on the westbound Avila Road approach, two left-turn lanes and a through lane on the southbound Willow Pass Road approach, and one right-turn lanes and one through lane on the northbound Willow Pass Road approach.
- H. In accordance with MM 7-6, the developer shall pay a traffic mitigation fee equal to their fair share of the improvements needed to adequately serve projected cumulative morning (AM) and evening (PM) peak hour traffic volumes at the Bailey Road/Myrtle Drive intersection in Contra Costa County and the City of Concord. These improvements include:
  - (1) Installation of a traffic signal;
  - (2) Provision of a left-turn lane on the southbound Bailey Road approach; and
  - (3) Widening of the westbound Myrtle Drive approach to provide an exclusive left-turn lane.
- I. In accordance with MM 7-7, the project developers shall contribute their fair share to all applicable development impact fee programs including the East County Regional Impact Fee, which is designed to fund improvements to regional facilities including SR 4.
- J. In accordance with MM 8-3, the developer shall: (1) comply with applicable per-unit conveyance system fees levied by DDSD and (2) demonstrate to the satisfaction of the DDSD and the City Engineer that DDSD sewage treatment capacity will be adequate to serve the development. This requirement shall be met through preparation of a sewage treatment adequacy evaluation in coordination with and to the satisfaction of the City Engineer. No project development requiring sewage treatment service beyond the 1218-ERU total anticipated by the DDSD shall be allowed until adequate sewage treatment capacity is demonstrated as required by this mitigation measure.

- K. In accordance with MM 8-8, the developer shall comply with the park dedication requirements of chapter 17.32 of the City's Municipal Code, or pay the requisite In Lieu Parkland dedication fee, as specified within Condition No. 46.
- L. In accordance with MM 9-2, the developer shall be responsible for design and construction of all improvements within the appropriate sections of Drainage Area 48B, Lines B and B-1 (as well as for any modifications required to also increase the volume of onsite detention storage), as may be identified by CCCFCWCD, based on their review of the hydrology report. The developer shall also pay all applicable drainage fees as determined by the CCCFCWCD. The project's Area 48B drainage fees would be used to fund construction of the proposed downstream drainage improvements. If the fees are not sufficient to cover the cost of these improvements, all additional costs would be paid by the developer, since there no alternative funding sources at this time. CCCFCWCD would repay these extra costs at such time as fees are collected on future development projects, under the terms of the Flood Control District's reimbursement policy.
- M. In accordance with MM 9-3 and National Pollution Discharge Elimination System (NPDES) regulations, the developer shall prepare a Stormwater Pollution Prevention Plan (SWPPP) consistent with State and RWQCB design standards, for implementation throughout project construction to control erosion on the project site, subject to the approval of the City Engineer.
- N. In accordance with MM 9-4 and to help reduce long-term accumulation of non-point source pollutants from the project within downstream surface water, the developer shall incorporate long-term source control and pre-discharge treatment measures into the Storm Water Pollution Prevention Plan (SWPPP) described in MM 9-3, in accordance with Municipal Regional Stormwater Permit Order No. R2-2015-0049 NPDES No. CAS612008, subject to the approval by the City Engineering Division.
- O. In accordance with MM 10-1, the project geotechnical engineer shall prepare a final design-level project geotechnical study subject to review and approval by an independent engineering geologist retained by the City at applicant expense. The review shall evaluate if the study and all of its conclusions are consistent with generally accepted geotechnical engineering practice and in agreement with the approved site development plan. Relevant provisions of the geotechnical study shall be incorporated into project grading and site preparation plans. All earthwork and site preparation shall be performed under the direct supervision of a

State-certified geotechnical engineer or to the satisfaction of the independent engineering geologist and the City Engineer.

- P. In accordance with MM 10-4, the City and/or its independent engineering geologist shall closely evaluate all project proposals for the construction of slopes, in particular cut slopes steeper than three-to-one, to prevent future slope failures that could damage existing homes/project improvements or require slope repairs at the expense of the West Pittsburg GHAD. If the stability of these proposed slopes can be independently confirmed, the developer shall implement the construction measures recommended in the project geotechnical study. If the slopes stability cannot be confirmed, the developer shall redesign the slopes to achieve a flatter more sustainable gradient.
- Q. In accordance with MM 10-6, specification for site development shall include mandatory phasing for construction of site improvements as recommended by the project geotechnical engineer if settlement monitoring indicates that long-term settlement within individual fill areas could eventually exceed allowable amounts and damage or otherwise limit the usefulness of buildings or other improvements.
- R. In accordance with MM 10-7, in addition to the observation of all cut and fill slope construction, the project geotechnical engineer shall inspect and certify that any expansive soils underlying individual building pads and all roadway subgrades have been either removed or amended in accordance with City-approved construction specifications. If expansive soils are not fully remediated on each lot and in the area of all public and private improvements at the time of site development the project geotechnical engineer shall make site-specific recommendations for grading, drainage, installation of foundation design, the addition of soil amendments and or the use of imported non-expansive fill materials as may be required to fully mitigate the effects of weak or expansive soils and prevent future damage to project improvements. Following review and approval by the City-retained independent engineering geologist and City Engineer (see Mitigation 10-1) these recommendations shall be incorporated into a report to be included with each building permit application and with the plans for all public and common-area improvements.
- S. In accordance with MM 10-8, development shall include a protocol for verifying that adequate protection has been provided for all foundations and underground utilities that could be damaged by corrosive soils. The project civil engineer shall be responsible for implementation of this protocol with final approval by the City Engineer.
- T. In accordance with MM 10-9, the developer shall prepare an erosion control plan subject to City approval and implement the plan during

construction. The plan shall provide for long-term stabilization of all exposed soils upon the completion of project development.

- U. In accordance with MM 10-10, the developer shall provide educational materials that discourage overwatering in landscaped areas shall be furnished to all future lot owners at the time of purchase and periodically thereafter, as part of an effort to control groundwater seepage.
- V. In accordance with MM 10-12, the developer shall request the project be annexed into the West Pittsburg Geologic Hazard Abatement District (GHAD) in order to adequately address the special circumstances and long-term geotechnical maintenance needs associated with development in areas of potential geologic instability. The existence of and the responsibilities attached to project inclusion in the GHAD shall be clearly disclosed to all purchasers of property within the project site. In addition, all risks and liabilities associated with the ownership of project land in the vicinity of potentially unstable slopes shall be fully explained to potential buyers at the time of purchase.
- W. In accordance with MM 11-1, the developer shall reseed cut and fill slopes or other graded/disturbed areas on the project site with a native herbaceous seed mix. No nonnative or invasive species shall be included in the mix.
- X. In accordance with MM 11-3, the City of Pittsburg shall not issue a grading permit for the project until adequate demonstration to the City that California red-legged frog issues have been resolved to the satisfaction of the U.S. Fish and Wildlife Service (USFWS). To satisfy the USFWS, the applicant will need to: (1) instruct the U.S. Army Corps of Engineers (Corps) to initiate formal consultation, pursuant to section 7 of the Federal Endangered Species Act, with the USFWS regarding the California red-legged frog; and (2) implement mitigation as necessary (see details below). A copy of a "non-jeopardy" Biological Opinion issued by the USFWS shall be submitted to the City prior to issuance of a grading permit.
- Y. In accordance with MM 11-4, the City of Pittsburg shall not issue a grading permit for the project until adequate demonstration to the City that mitigation for impacts to California tiger salamander habitat will be implemented to the satisfaction of the California Department of Fish and Wildlife (CDFW; and the USFWS since the species has recently been federally listed). To satisfy the CDFW and USFWS, the applicant will need to: (1) consult with the CDFG and the USFWS; and (2) redesign the project as much as possible to avoid aestivation and potential breeding habitat; or (3) where avoidance is not feasible, replace affected habitat in accordance with CDFW and USFWS requirements, and in accordance

with specifications discussed in Mitigation 11-1; and (4) salvage adults and/or larvae.

- Z. In accordance with MM 11-6, the applicant shall coordinate with the USFWS regarding any additional review of potential San Joaquin kit fox impacts resulting from the proposed project. Additionally, within 30 days prior to any earth-moving disturbance, a qualified kit fox biologist(s) [i.e., the biologist(s) must meet the qualifications stated in USFWS' survey protocol (USFWS 1997b)] shall conduct preconstruction den surveys on the project site. These surveys shall follow the methodology outlined in Appendix 1, Section 2, of USFWS' 1997 survey protocol. Any potential dens identified during the preconstruction surveys shall be monitored with cameras for a minimum of three nights in accordance with the survey protocol. If kit fox or kit fox sign is identified at any time during these surveys, all work shall cease and USFWS and CDFW personnel shall be contacted immediately.
- AA. In accordance with MM 11-7, the applicant shall retain a qualified biologist to conduct CDFW-protocol surveys for burrowing owl the year grading is proposed. If burrowing owls are found on the project site, the applicant shall be required to prepare a Habitat Mitigation Plan and a Mitigation Agreement for any burrowing owls identified. The City shall receive copies of the approved Mitigation Plan and Mitigation Agreement between the applicant and the CDFW prior to issuing a grading permit for the proposed project. All surveys and mitigation shall be coordinate by the applicant with CDFW. If such surveys demonstrate that burrowing owls do not occur on the project site, no further requirement for burrowing owls shall be required by the City.
- BB. In accordance with MM 11-8, the applicant shall retain a qualified raptor biologist to conduct spring nesting surveys the year grading is proposed. If nest(s) are found, the CDFG can be expected to require the following or similar protection measures:
- (1) Establishment of a fenced buffer of 1,000 feet around any survey-identified active raptor nest, or as otherwise determined by a qualified, CDFG-approved raptor biologist (see text below).
  - (2) Having a biological monitor present during all grading activity near the buffer zone; and
  - (3) Avoiding grading within the buffer zone until the raptor biologist states that the young have fledged and are flying well enough to avoid being impacted by project construction.

If such surveys demonstrate that raptor nests do not occur on the project site, no further requirements for these raptors shall be required by the City.

CC. In accordance with MM 11-9, the applicant shall retain a qualified biologist to conduct spring nesting surveys for loggerhead shrike, coordinated with the CDFG, the year grading is proposed. If nest(s) are found, the applicant shall complete the following measures:

- (1) Establish a 250-foot fenced buffer zone around each active nest location; and
- (2) Have a biological monitor present during all grading activity near the buffer zone.

If appropriately timed nesting surveys demonstrate that loggerhead shrikes do not nest on the project site, no further requirements for the bird shall be required by the City.

DD. In accordance with MM 11-10, the applicant shall retain a qualified biologist to conduct spring nesting surveys for California horned lark, coordinated with the CDFG, the year grading is proposed. If nest(s) are found, the CDFG can be expected to require the applicant to complete the following or similar measures:

- (1) Establish a 250-foot-wide fenced buffer zone around each survey-identified active nest location; and
- (2) Have a biological monitor present during all grading activity near the buffer zone.

If such surveys demonstrate that California horned larks do not nest on the project site, no further requirements for this bird shall be required by the City.

EE. In accordance with MM 12-1, a qualified archaeologist shall be retained at applicant's expense to monitor project-related on-site excavation. In the event that subsurface cultural resources are uncovered during approved ground-disturbing activities, work in the immediate vicinity shall be halted immediately and the retained archaeologist shall evaluate the finds and make a determination in regard to the cultural value of the discovery and warranted mitigation measures. Such preliminary field inspection may demonstrate the need for some form of additional subsurface testing; e.g. excavation by auger shovel or backhoe unit. The discovery or disturbance of any significant cultural resources should be reported to the California Historical Resources Information System (CHRIS). The discovery of any Native American cultural resources shall also be reported to the Native American Heritage Commission. If a significant archaeological resource is identified through this field inspection process the City and project proponent shall seek to avoid damaging effects to the resource. Preservation is the preferred manner of mitigating impacts to an

archaeological site. When in-place mitigation is determined by the City to be infeasible, a mitigation program, including measures set forth in sections 15064.4 and 15126.4 of the CEQA Guidelines shall be implemented. Specifically, a data recovery plan which makes provisions for adequate recovery of the scientifically consequential information about the site shall be prepared prior to any additional excavation being undertaken. The plan shall be submitted to the California Historical Resources Regional Information Center (i.e. the NWIC at Sonoma State University). If Native American artifacts are indicated the plan shall also be submitted to the Native American Heritage Commission (NAHC). Identified cultural resources should be recorded on State Department of Parks and Recreation form DPR 422 archaeological sites. The data recovery plan should be finalized as necessary to incorporate any mitigation additions or revisions recommended by these two groups and or required by the City. If human remains are found special rules set forth in State Health and Safety Code section 70505 and CEQA Guidelines section 15126.4(b) shall apply. The identified mitigations shall be undertaken to City satisfaction if necessary prior to resumption of grading activities. A data recovery plan and data recovery shall not be required if the City determines that testing or studies already completed have adequately recovered the necessary data provided that the data are available for review at the California Historical Resource Regional Information Center CEQA Guidelines section 15126.4(b).

FF. In accordance with MM 14-1, the developer shall:

- (a) Conduct an acoustical study in accordance with state Title 24 requirement that identified to City satisfaction the noise insulation and other features to be included in the design of the project residential structures in the vicinity of SR 4 and along West Leland Road sufficient to maintain interior noise levels at or below City and State standards (45  $L_{dn}$ );
- (b) Design common outdoor use areas in the residential portions of the project to maintain exterior noise levels to “normally acceptable” levels. These areas shall be situated away from predominant noise sources or should be shielded by natural or created topographical features, barriers or the buildings themselves; and
- (c) Construct a noise barrier for residences proposed adjacent to West Leland Road. The noise barrier should extend approximately five to ten feet above the pad elevations to reduce traffic-generated noise levels to 60 dBA  $L_{dn}$ . The barrier shall take the form of a wall, berm, and/or structures that shield the outdoor use areas of the first row of residences north and south of West Leland Road.

GG. In accordance with EIR Mitigation Measure (MM) 14-3, the following conventional noise abatement measures shall be followed during all grading and construction phases:

1. *Construction Equipment Mufflers and Maintenance.* Properly muffle and maintain all construction equipment powered by internal combustion engines.
2. *Idling Prohibitions.* Prohibit unnecessary idling of internal combustion engines.
3. *Equipment Location and Shielding.* Locate all stationary noise-generating construction equipment such as air compressors as far as practical from any nearby school and residences.
4. *Quiet Equipment Selection.* Select quiet construction equipment, particularly air compressors, whenever possible. (Fit motorized equipment with proper mufflers in good working order.)
5. *Noise Disturbance Coordinator.* Designate a "noise disturbance coordinator" (e.g., a City staff member or site manager) who would be responsible for responding to any local complaints about construction noise. The disturbance coordinator would determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and institute reasonable measures warranted to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site.
6. *Truck Routes.* Route all construction traffic to and from the project site via designated truck routes where practical. Prohibit construction-related heavy truck traffic in residential areas where feasible.

HH. In accordance with MM 15-1, the developer shall implement the following dust control measures during project construction activities:

- (a) Water all active construction areas at least twice daily and more often during windy periods Active areas adjacent to existing land uses must be kept damp at all times or must be treated with non-toxic stabilizers or dust palliatives;
- (b) Cover all trucks hauling soil sand and other loose materials or require all trucks to maintain at least two feet of freeboard;
- (c) Pave or apply water three times daily or apply non-toxic soil stabilizers on all unpaved access roads parking areas and staging areas at construction sites;
- (d) Sweep daily (preferably with water sweepers) all paved access roads, parking areas and staging areas at construction sites;
- (e) Sweep streets daily (preferably with water sweepers) if visible soil material is carried onto adjacent public streets;
- (f) Hydroseed or apply non-toxic soil stabilizers to inactive construction areas;

- (g) Enclose, cover or water twice daily or apply non-toxic soil binders to exposed stockpiles (dirt, sand, etc.);
  - (h) Limit traffic speeds on unpaved roads to 15 miles per hour;
  - (i) Install sandbags or other erosion control measures to prevent silt runoff from grading onto adjacent roadways paths and other paved areas and in particular into nearby drainage channels;
  - (j) Replant vegetation in disturbed areas as quickly as possible;
  - (k) Install windbreaks or plant trees as vegetative wind breaks at windward side(s) of construction areas;
  - (l) Limit excavation and grading activity when winds' instantaneous gusts result in unmanageable dust; and
  - (m) Limit the area subject to excavation grading and other construction activity at any one time.
- II. In accordance with MM 15-2, the developer shall provide for strategies identified in the 2004 FEIR to reduce air emissions and encourage telecommuting, including but not limited to the following measures:
- (a) Homes shall be designed to provide facilities to allow the use of emerging electronic communication technologies;
  - (b) Use natural gas only fireplaces where fireplaces are included in the homes;
  - (c) Install outdoor electrical outlets or outlets within the garage to promote the use of electric lawn and landscaping maintenance equipment;
  - (d) Include restrictions in the CC&Rs to allow only natural gas or propane barbeques; and
  - (e) As feasible, require use of electrical or alternatively fueled equipment for maintenance.

#### Site Access and Circulation Assessment Recommendations:

7. In accordance with Recommendation 3, prior to approval of the final map, the developer shall submit a final refuse pickup plan to be reviewed by the City and refuse collection company, which shall include, at a minimum:
- 1. A map showing the general location where all trash bins shall be placed on pickup days, in substantial conformance with the draft refuse plan maps dated June 1, 2018;
  - 2. a copy of a disclosure to all residents detailing the trash pickup plan and homeowner responsibilities;
  - 3. a copy of language to be recorded within the Conditions, Covenants and Restrictions (CCRs) detailing the refuse plan requirements and homeowner responsibilities;

4. a striping plan identifying how curbs will be marked to identify trash receptacle placement areas; and
  5. any other materials deemed necessary by the City Engineer.
8. In accordance with Recommendation 4, the developer shall install signage and barricades prohibiting pedestrian crossing movements of West Leland Road at the intersection of the new project roadway and Tomales Bay Drive on both the east and west legs of the intersection. The final design and location of the signage and barricades shall be subject to review and approval by the City Engineer.
9. In accordance with Recommendation 6, the developer shall provide information on public transit opportunities to prospective and new residents to encourage transit use to and from the site.
10. In accordance with Recommendation 7, the developer shall include within the CC&Rs language requiring garages be reserved for vehicle storage.

Design Review:

11. The proposed dog park on Lot K shall be modified to allow for a 12-foot wide Class I trail starting from the eastern terminus of Street B to the eastern edge of the project area. The easement shall be improved to provide a 12-foot wide Class I trail.
12. The proposed Class I trail on either side of Lot H shall be continued across Lot H with a temporary 8-foot wide asphalt concrete pedestrian path to allow for a connection between Neighborhoods “C” and “D.” A permanent trail connection may be conditioned upon the future commercial development.
13. Decorative crosswalks shall be installed at the following locations:
  1. Across Street A, immediately north of West Leland Road;
  2. Across Street A, immediately south of Street B
  3. Across Street B, to the west and east of Street A; and
  4. Across Street E, immediately north of West Leland Road.

Crosswalks described above shall be maintained by the City. Final design and locations of the decorative sidewalk shall be subject to approval by the City Planner and City Engineer.

14. Developer shall provide a “cool roof” on each residential building for reduction of heat island effect or installation of solar photovoltaic panels in conjunction with other Title 24 energy components to meet current code.

15. Developer shall install prewiring for electric vehicle (EV) charging within each residential unit's garage.
16. If solar photovoltaic panels are not installed on a house, the developer shall install pre-wiring for photovoltaic (solar) panels within the residential unit. The construction drawings for each plan shall include appropriate electrical and roof framing details as necessary to reflect the option for pre-wiring the houses for roof-mounted photovoltaic panels. The developer shall maintain and make available to all potential buyers, in each sales office, a brochure or list of vendors and installers of solar panels for residential use. A copy of the vendor list/brochure shall be provided to the Planning Division, prior to issuance of the first building permit for construction of a single-family residence.
17. The developer shall provide estimated water use calculations with the Final Landscape Plans to show compliance with the City's water efficient landscape ordinance.
18. Prior to occupancy of the residential units by residents, the developer shall complete installation of landscaping and automatic irrigation systems in street landscape areas and all front, side and rear yards that are to be maintained by the project Home Owners Association (HOA), in accordance with Article VII (Landscaping, Irrigation and Hydroseeding) of PMC Chapter 18.84, or other applicable water efficient landscape ordinance, subject to approval by the Community Development Department. The developer shall provide the irrigation system controller map, programming table, and annual maintenance schedules to the HOA. If required landscaping is not completed prior to final inspection and occupancy, the developer shall post a bond to assure that the work is completed and turned over to the HOA to the satisfaction of the City.
19. The developer shall include in the project Conditions, Covenants, and Restrictions (CC&Rs) and homebuyer disclosures information about integrated pest management and the principles of water-efficient landscapes, including but not limited to those principles that are described in PMC chapter 18.84, article VII.
20. Prior to issuance of a building permit, the developer shall provide a photometric plan to identify the appropriate street light spacing. In general, the lighting requirements used shall be as described in the Illuminating Engineering Society of North America (IESNA) standards. With the exception of Streets "A" and "B," the developer may opt to utilize lighting mounted to exterior house walls to provide street/alley and pathway lighting upon approval by the City Engineer. All light fixtures intended to provide lighting for streets/alleys and pathways shall be placed on a timer and shall automatically turn on at dusk and stay on until sunrise. The final design and location of the lighting fixtures shall be subject to approval by the Planning and Engineering Divisions.

21. The developer shall enter into an affordable housing agreement, subject to City Council approval, prior to the approval of a final map. The agreement shall comply with all applicable sections of the Vista Del Mar Development Agreement, previously adopted by the City Council through Ordinance No. 04-1231 and/or as amended in subsequent Development Agreements.
22. The developer shall provide a seating area between the basketball and bocce courts. The seating area shall include a charcoal bbq and shall be covered by a pergola or other cover. The developer shall also install a water fountain and trash and recycling bins. The final design and locations are subject to review and approval by the Planning Division prior to installation.
23. The mid-block bulb-out projecting into Street A shall be removed.
24. The developer shall install a landscape visual barrier to the future commercial development along the east side of Lot C. Landscape material shall include plants with a mature height of a minimum of six feet. The final design and location of the landscaping shall be subject to approval by the Planning Division.
25. Lot C shall reserve for a future walkway connection to the commercial site, to be determined with the commercial site development application, to provide for a pedestrian connection between Neighborhood D1 & D2 and the commercial site.
26. All side yard fencing along property lines adjacent to Streets E, F, G, and H within Neighborhood D shall not extend beyond 5 feet from the side of the building.
27. Roof vents shall be painted the same color as roofing material to which they are adjacent. Downspouts, side vents, attached utility boxes, and hose bibs shall be painted the same color or colors as the surface or surfaces to which they are adjacent.
28. All garage doors within residential neighborhoods shall be equipped with automatic openers.
29. For residential units exposed to exterior decibel levels of 60 dB or higher, as shown on the noise contour map in Appendix F of the EIR Addendum, all exposed windows shall be acoustically strengthened to reduce interior noise levels to a maximum of 45 decibels.
30. In addition to the areas shown on the proposed vesting tentative map and master plan, and as required in accordance with MM 14-1, the developer shall install a masonry wall or wood fencing in the following locations:
  1. Six-foot high wood fencing along the eastern boundary of Lots 66, 68, 70, 72, 74, and 76;

2. Minimum six-foot high masonry wall along the eastern boundary of Lots 325, 330, 335, 340, and 346; and
  3. Minimum 4-foot-high protective fencing, where there is no other fencing or wall, along the top of the slope of the stormwater basin on Parcel J and Parcel L.
31. The final design and colors of all masonry sound walls fronting West Leland Road shall be a Proto II or equal, split face block wall system in a tan color with a decorative wall cap and pilasters placed a maximum interval of 25 feet, similar to the existing wall design and color on the south side of the street. All masonry walls constructed as a part of this development shall be maintained by the applicable Homeowners' Association. The final design of the all masonry sounds walls shall be reviewed and approved by the Planning Division prior to issuance of a building permit.
32. Signage for the commercial site is not approved at this time. No signs shall be installed on-site until plans have been reviewed and approved by the City under a separate sign permit application.
33. The applicant shall install minimum four-inch-high, die cut, block style numbers on all residential units for address identification. The numbers shall be in a color that is contrasting to the background surface to which they are attached. Units in Neighborhoods A-1, A-2, and C shall be installed within 10 feet of each unit's main entry door and may also be installed on facades with garage doors, if different. Units in Neighborhood D shall be installed within 10 feet of each unit's entry door.
34. All air conditioning units, transformer boxes, and utility meters placed above-ground shall be substantially screened from public view by way of unit location, permanent wood screening fences, or landscape planting.
35. The developer shall install two wall-mounted bicycle racks within each garage.
36. All garages shall provide for a minimum of two 10-foot by 20-foot parking spaces. Garages for units within neighborhoods A-1 and A-2 shall provide eight (8) square feet for trash bin storage.
37. In order to ensure the perpetual maintenance of landscape improvements along West Leland Road, landscape, trail and perimeter wall maintenance within parcels D, E, F, G and lot P shall be performed by the Homeowner's Association. In addition, the developer shall enter into an Operations and Maintenance Agreement with the City for the landscaping and irrigation improvements. This agreement shall run with the land and allow the City to access and maintain these areas if the City deems the landscaping and /or irrigation improvements are not maintained appropriately. The agreement shall specify that the cost of any required maintenance performed by the City shall be solely borne by the

Homeowners' Association and shall be executed prior to issuance of a building permit.

Engineering Fees and Deposits:

38. Major Subdivision Map Processing Fee. The developer shall pay the fee according to the following amounts as applicable to the project:

| <u>1<sup>st</sup> - 3<sup>rd</sup> Final Map Check</u> |         | <u>4<sup>th</sup> Final Map Check</u>      |
|--------------------------------------------------------|---------|--------------------------------------------|
| 5-50 lots                                              | \$2,300 | \$2,300 + \$800/ea. additional map check   |
| 51-150 lots                                            | \$3,000 | \$3,000 + \$1,500/ea. additional map check |
| 151 or more                                            | \$3,365 | \$3,365 + \$1,330/ea. additional map check |

This fee shall be paid in full to the Engineering Division prior to the City Council's approval of the Final Map.

39. Improvement Plan Review Fee. The Plan Review Fee is based on the engineer's estimate, which shall be included with the first set of plans submitted for review. The current Improvement Plan Review Fee is 3.5% of the engineer's cost estimate for improvements.
40. Improvement Plan Review Deposit. The developer shall provide a deposit of 50% of the total Improvement Plan Review Fee with the initial submittal of improvement plans. This initial deposit will also be applied towards the total fees due for the project. The remaining balance of Improvement Plan Review fees shall be due payable prior to the issuance of an Engineering Site Development Permit.
41. Improvement Inspection Fee. The developer shall pay an Improvement Inspection Fee according to the following rates as applicable to the project:

| <u>Percent of engineer's estimate</u> | <u>Total estimated costs</u> |
|---------------------------------------|------------------------------|
| 6.5%                                  | ≥ \$500,000                  |
| 4%                                    | \$500,001 - \$5 million      |
| 3.6%                                  | < \$5 million                |

The improvement Inspection fee shall be due payable prior to the issuance of an Engineering Site Development Permit.

42. Grading Plan Review Fee. The Grading Plan Review Fee is based on the engineer's estimate for the cost of grading, or if cubic yard quantities are available, per the Grading Fee Table approved by City Council. The current Grading Plan Review Fee is 2.5% of the engineer's estimate for the cost of grading.

43. Grading Plan Review Deposit. The developer shall provide a deposit of 50% of the total Grading Plan Review Fee with the initial submittal of grading plans. This initial deposit will also be applied towards the total fees due for the project. The remaining balance of Grading Plan Review Fees are due payable prior to the issuance of the Grading Permit.
44. Grading Inspection Fee. The Grading Inspection Fee is based on the engineer's estimate for the cost of grading, or if cubic yard quantities are available, per the Grading Fee Table approved by City Council. The current Grading Inspection Fee is 3% of the engineer's estimate for the cost of grading. The fee shall be due payable prior to the issuance of a Grading Permit.
45. In Lieu Parkland Dedication Fee. The developer shall pay an In-Lieu Parkland Dedication Fee equivalent to providing 5 acres of park area per one thousand persons residing within the new development and shall be based on the fair market value of developed parkland, or as established with separate agreement as approved by the City Engineer.
46. Facility Reserve Charge. The applicant shall pay the City of Pittsburgh Facilities Reserve Charge (PMC Chapters 13.08, 13.12 and 13.24) (the "FRC") to the Engineering Department, for water and sewer service in the amounts in effect when the applicant obtains a Building Permit. The applicant understands that the current FRC on file effective August 20, 2005, shall be paid in accordance with the fee schedule approved by Resolution No. 05-10290, and amended by Resolution No. 12-11778 on February 21, 2012, a copy of which is available at the City.
47. Local Traffic Mitigation Fee. The developer shall pay the Local Traffic Mitigation Fee in accordance with PMC Chapter 15.90 to the Engineering Department prior to issuance of a building permit. The developer understands that the LTMF is reviewed and adjusted annually to the current Construction Cost Index (CCI) and may be increased at the City Council's discretion based on revised cost estimates for roadway and transit facilities and other factors that demonstrate an increase is needed to offset traffic impacts caused by new development.
48. Regional Transportation Development Impact Fee. The Developer shall pay the Regional Transportation Development Impact (RTDIM) Fee in accordance with PMC Chapter 15.103 to the Engineering Department prior to issuance of a building permit. The RTDIM will be automatically increased or decreased on January 1 of each year based on the percent change in the Engineering News-Record Construction Costs Index – San Francisco Bay Area between September 1 and September 1 of the preceding two calendar years.
49. Final Map Deposit. The developer shall provide a deposit of \$500 prior to City Council's approval of the final map. The deposit shall be returned to developer once the City is in receipt of a full-size vellum copy of the recorded final map.

50. Record Drawing Deposit. The developer shall provide a \$500 deposit prior to City Council's approval of the final map. The deposit shall be returned to developer once the City is in receipt of the Record Drawing AutoCAD and PDF file, and full sized vellum copy of Improvement Plans, that were signed by the City Engineer prior to Engineering Site Development Permit issuance.
51. Sanitary Sewer Inspection Deposit. The developer shall provide a sanitary sewer inspection deposit prior to the issuance of the Engineering Site Development Permit issuance. The current deposit amount is \$1,000 for the first 1,000 linear feet of sewer main plus \$1.10/linear foot of additional sewer pipe.
52. Storm Drain Inspection Deposit. The developer shall provide a storm drain inspection deposit prior to the issuance of the Engineering Site Development Permit issuance. The current deposit amount is \$1,000 for the first 1,000 linear feet of storm drain main plus \$1.10/linear foot of additional storm drain pipe.
53. Geographical Information System Fee. The current Geographical Information System (GIS) Fee is \$0.05/sf of building for non-residential projects, and \$100/dwelling unit for all residential projects. The GIS fee is due payable prior to the issuance of an Engineering Site Development Permit.
54. NPDES Plan Review Fee. The developer shall pay an NPDES plan review fee for review of stormwater control plans and processing of closeout agreements and / or review of Storm Water Pollution Prevention Plans (SWPPP). The current fee is:
  - \$3,000 for the first 10,000 sf up to 1st acre (projects with Risk Factor 1)
  - Add additional \$136/acre for projects greater than 1 acre, up to the first 5 acres (projects with Risk Factors 2 or 3)
  - Add additional \$31/acre for projects greater than 5 acres
55. NPDES Site Inspection Deposit. The developer shall pay an NPDES inspection deposit for City staff's inspection of C.3 compliant facilities constructed, and /or inspection of construction site for compliance with Best Management Practices in accordance with the City's Municipal Regional Stormwater NPDES Permit. The current rate is:
  - \$12,000 for the first 10,000 sf up to 1st acre ( projects with Risk Factor 1)
  - \$24,000 for projects greater than 1 acre (projects with Risk Factor 2 or 3)

This deposit shall remain in place for the duration of the first year of the project. If the project is completed prior to the project's anniversary, the remaining balance of the deposit will be returned to the developer.

56. Supplemental Studies. If additional engineering studies are deemed necessary by the City Engineer, i.e. geotechnical, structural, hydraulic, etc., or expedited reviews are requested by the developer, the developer shall pay for all costs related to the extra work. The costs may include the preparation of special studies, additional staff time, and/or reviews of the special studies if studies are prepared by the developer's engineer.

Submittals to the Engineering Division:

57. Final Map. The developer shall submit three (3), full size, hard copies of the Final Map with closure calculations, prior to City Council's approval of each final map, improvement, or grading plans.
58. Improvement Plans. The developer shall submit seven (7) full size, hard copies of Improvement Plans. The Improvement Plans shall include, but not be limited to, the following:
- Site Plan
  - Grading and Drainage Plan
  - Utilities Plan which identifies ownership and maintenance responsibilities of both wet and dry utilities;
  - Landscaping and Irrigation Plan
  - Joint Trench Plan
  - Offsite Improvements Due to Project Impacts
59. All CCRs recorded as part of the project shall identify the long-term maintenance responsibilities of the City and the Homeowners' Association, as shown in the Improvement Plans.
60. The developer shall submit two (2) copies of the Storm Water Pollution Prevention Plan (SWPPP) to the Engineering Department for review and comment prior to the issuance of a Grading Permit. The SWPPP shall identify Best Management Practices (BMPs) appropriate to the uses conducted on-site to effectively prohibit the entry of pollutants into storm water runoff. The SWPPP measures shall also include erosion control measures to prevent soil, dirt, and debris from entering the storm drain system. The developer shall provide the project WDID number as evidence of having obtained a construction permit from the Regional Water Quality Control Board. If a WDID number has not yet been issued, a copy of the Notice of Intent that was sent to the Regional Water Quality Control Board shall be submitted with the grading permit application.
61. The developer shall submit three (3) complete sets of plans and specifications of the project, including any of the following required built-in fire protection systems, to the Fire District for review and approval prior to construction to ensure compliance with minimum requirements related to fire and life safety. Plan review fees for the Fire District will be assessed at that time.

- a. Private underground service water mains
  - b. Building construction plans
  - c. Fire Sprinklers
  - d. Site improvement Plans
62. The developer shall submit a current geotechnical report to the Engineering Department prior to approval of any civil plans and issuance of an engineering permit.
63. The developer shall submit a complete area study specific to the Alves ranch project site only, for storm water (10-year storm design) capabilities, prior to the approval of the final map, and mitigate additional storm runoff demands anticipated under build out conditions. The study shall include a review of the impact of the site grading on the 10-year flood level in accordance with the Federal Emergency Management Agency (FEMA) guidelines. If additional mitigation measures are required then the study and measures shall be submitted to the City Council for its review and approval.
64. The developer shall submit grading and improvement plans to retrofit the existing detention basin, to accommodate stormwater runoff from the residential improvements of the Alves Ranch project and the Vista Del Mar subdivisions. These revisions are required to enable the detention basin to function both as a Stormwater Treatment, and Stormwater Detention Facility to meet the criteria for both provision C.3 of the Clean Water Program's Regional Permit, and Flood Control criteria, respectively. Improvement plans detailing modifications to the outlet and dewatering structures are to be submitted to the City and County Flood Control District for review and approval by the City prior to the issuance of any grading permits for the project. In addition, all such improvements to the basin must include adequate access for maintenance vehicles and equipment.
65. Prior to the City's acceptance of the Detention Basin, the developer shall submit an Operations and Maintenance Control Plan (O&M Plan) for the maintenance of the basin by the GHAD. Proper maintenance of the basin is essential for maintaining the functionality of the basin. The O&M Plan shall address maintenance of the spillway and standpipe and provide recommended intervals for silt removal. Developer understands that acceptance of the detention basin by the GHAD shall occur when all streets within the development are completed, and Street A has been accepted for continuous maintenance by the City.
66. Developer understands that all streets within the project, with the exception of Street A will be privately maintained by the HOA. However, upon City Council's acceptance of the public improvements for continuous maintenance, the Pittsburg Police Department is authorized to enforce all provisions of the State Vehicle Code on all private streets of the Alves Ranch Development. Enforcement of the Vehicle Code shall consist of but not be limited to enforcement of the following: Speed Limits, Off Street Parking, and Vehicle

Codes on the common private streets within the subdivision. Developer further understands all appropriate signage and striping are to be installed and completed prior to commencement of enforcement by the Pittsburg Police Department.

67. Developer understands that the establishment of a perpetual conservation easement, specifying management of the land to be for “Waters of the United States” and state California red-legged frog, and California tiger salamander values, is yet to be completed. This conservation easement was a mitigation measure to address the impacted wetland areas, of the previously approved overall project site. Recordation of this conservation easement shall occur prior to the recordation of the last final map for the residential subdivision, as outlined in the Development Agreement between The City of Pittsburg, Alves Ranch LLC, and William Lyon Homes, section 3.06a.
68. Annexation Documentation for CFD 2005-1. Community Facilities District 2005-1 is for Public Safety Services, the fee will provide funding for an increase of police coverage in the area. The rate of the CFD 2005-1 fee is subject to City Council Resolution No. 05-10342. The developer shall deliver written approval in a manner acceptable to the City Finance Director, that the owner of the parcel is electing to annex the subject property into the 2005-1 Community Facilities District (CFD 2005-1) for Public Safety Services, prior to the recordation of the first Final Map.
69. Annexation Documentation for CFD 2007-1. Community Facilities District 2007-1 is for Park Maintenance. The rate of the CFD 2007-1 fee is subject to City Council Resolution No. 07-10698. The developer shall deliver written approval in a manner acceptable to the City Finance Director, that the owner of the parcel is electing to annex the subject property into the 2007-01 Park Maintenance Community Facilities District (CFD 2007-1), prior to the recordation of the first Final Map.
70. Annexation Documentation for CFD 2017-1. Community Facilities District 2017-1 is for Fire Facilities and Fire Safety and Emergency Services. The rate of the CFD 2017-1 fee is subject to City Council Resolution No. 17-13311. The developer shall deliver written approval in a manner acceptable to the Community Development Director, that the owner of the parcel is electing to annex the subject property into the 21017-1 Fire Facilities and Fire Safety and Emergency Services Community Facilities District (CFD 2017-1), prior to the issuance of any building or engineering permits.
71. Street A shall be designed to meet City Standard Specifications within the 78-foot street right-of-way. Final design of Street A shall be subject to review and approval by the City Engineer.
72. Grading and/or building permit plans (including structural, mechanical, architectural, grading, drainage, site, landscape, and other drawings) shall show the details and methods of construction for site design features, measures to limit

directly connected impervious area, pervious pavements, self-retaining areas, treatment BMPs, permanent stormwater control BMPs, and other features that control stormwater flow and potential for stormwater pollutants.

73. The developer shall evaluate the existing, receiving storm, sewer, and water facilities for adequate capacity and provide the results to the City to identify any service or supply problems. The cost for installation of additional facilities or retrofit of existing facilities shall be borne by the developer.
74. The developer shall provide appropriate sanitary sewer, sized to adequately accommodate the project's wastewater demand.
75. The developer shall underground all new utility distribution facilities fronting the property. The location of all existing above ground utility distribution facilities to remain as-is and will be screened, to the best of the developer's ability, by landscape plantings.
76. The developer shall install all utility boxes underground and all wires and cables must be installed in conduits. Compliance with this condition shall be at the discretion of the City Engineer.
77. The developer shall incorporate and/ or adhere to all applicable provisions of the Development Agreement, between the City, Alves Ranch, LLC, and William Lyon Homes, recorded February 25, 2005, and subsequent amendments to the Development Agreement between the City of Pittsburg, Alves Ranch LLC, and William Lyon Homes. Provisions of this agreement shall be reviewed prior to the approval any final map. The City reserves the right to require the applicant to perform any of the applicant's obligations under the development agreement before recordation of the final map to the extent deemed necessary by the City Engineer.
78. The developer shall ensure that proposed revisions to the basin to the basin are in conformance with prior acceptance by the Division of Safety of Dams (DSOD). If changes to the basin are proposed, by the developer, these changes shall be subject to review and approval by the City Engineer.
79. The Developer shall submit to the Flood Control District for review a drainage study, with an updated hydrology map, that analyzes the feasibility of increasing the onsite basin's water treatment volumes and the impacts these proposed modifications will have on the basin's Flood Control storage capacity. Developer to obtain approval by the City for these improvements prior to the issuance of a Grading Permit.
80. The Developer shall pay all fees associated with Drainage Area 48B (DA 48B) to the Flood Control District prior to issuance of the first final map. The Flood Control District entered into a reimbursement Agreement (dated September 27,

2011) with the Vista Del Mar Developer, William Lyon Homes, for the construction of planned drainage lines "B" and "B-1" in DA 48B. Per the Reimbursement Agreement, the Alves ranch Development was afforded a credit of \$449,231 in DA 48B fees for construction of certain planned drainage facilities. Per the Agreement, "In the event there are changes in the land use, density, or impervious surfaces on the Alves property, Alves or its successor(s) in interest shall be responsible for paying the Flood Control District additional drainage fees based on the drainage fee ordinance applicable at that time." Should changes to the original site plan incur additional DA 48B fees, they are due payable to the Flood Control District prior to recordation of the first final map.

81. The developer shall maintain a minimum of fifteen (15') feet setback from top of detention basin, as recommended in Feb. 2008 - Preliminary Geotechnical Investigation prepared by BGC, or any design exception recommendations specifically noted by Geotechnical engineer in a supplemental report and approved by City Engineer.
82. The developer shall preserve the existing maintenance access road to the detention basin & overflow structure and provide an access point to the road. The final design of this access point shall be reviewed and approved by the City Engineer.
83. The developer shall provide a eight- foot (8') temporary asphalt concrete pathway fronting Lot H, the future commercial development. A permanent pathway may be conditioned to be constructed as part of the approvals for the commercial development.
84. The developer shall relinquish the abutter's rights for all corner lots.
85. The developer shall provide 6-foot wide sidewalks throughout the subdivision.
86. The developer shall construct walls made from concrete block, gravity concrete, or similar material when walls are required between lots.
87. The developer shall provide a safe release of drainage from sump areas, without conveying water over private property, allowing water to drain without damaging private or public improvements in the event of blockage to the storm drain system.
88. The developer shall provide a water sampling station as directed by the City Public Works Department.
89. The developer shall provide an adequate and reliable water supply for fire protection with a minimum fire flow of 2,000 gallons per minute (GPM). Required flow shall be delivered from not more than two hydrants flowing simultaneously

for the duration of 120 minutes while maintaining 20 pounds residual pressure in the main.

90. The developer shall install fire hydrants of the East Bay type. Hydrant locations shall be determined by the Contra Costa Fire Protection District upon submittal of three (3) copies of complete site improvement plans or utility plans. Hydrants shall be installed, in service, and inspected by the Fire District prior to construction.
91. The developer shall submit three (3) copies of a 300-foot scale parcel map indicating approved fire hydrant locations, street names, and addresses to the Fire District for mapping purposes. These maps are required prior to Fire District approval of final improvement plans.
92. The developer shall create and dedicate utility parcels to the City or provide adequate utility easement areas for City's maintenance and access.
93. The developer shall provide estimated water use calculations to show compliance with the City's water efficient landscape ordinance.
94. The developer shall provide two points of access to the satisfaction of the Contra Costa County Fire Protection District (CCCYPD) prior to issuance of the first building permit for any unit east of Street "A".
95. The developer shall paint all red curbs red where no parking stalls are shown, and "Fire Lane" markings shall be painted where appropriate.
96. The developer shall provide traffic signal pre-emption systems (Opticom) on any new or modified traffic signals installed in conjunction with this development.
97. The developer shall provide a Central Irrigation System, for portions of the site landscaping to be maintained by the City, that is compatible with Rainmaster DX 2 Evolution, with a remote controller included with the package. The installation of this system shall be certified by a John Deere Landscapes United Greentech representative prior to the City's acceptance of the installation.
98. The developer shall design the landscaping within the areas of public right of way in accordance with the provisions of Section 18.84.320 of the Pittsburg Municipal Code, and current standard details.
99. The developer shall incorporate long-term best management practices (BMP's) for the reduction or elimination of storm water pollutants. The project design shall incorporate wherever feasible, the following long-term BMP's in accordance with the Contra Costa Clean Water Program for the site's storm water drainage:

- Use pavers for walkways and other appropriate hardscape surfaces as an option to buyers to minimize impervious areas.
- Minimize the amount of directly connected impervious surface area.
- Delineate all storm drains with “No Dumping, Drains to Delta” permanent markings
- Construct concrete driveway weakened plane joints at angles to assist in directing run-off to landscaped/pervious areas prior to entering the street curb and gutter.
- Distribute public information items regarding proper use of pesticides to buyers.

*Standard Conditions:*

100. The Standards Conditions of Development as adopted by the Pittsburg Planning Commission by Resolution No. 8931 shall apply as conditions of approval of this project, as determined applicable by the Planning Division. Where there is a conflict between Resolution No. 8931 and the specific conditions identified in this resolution, the specific conditions of this resolution shall govern.
101. All site development shall comply with Title 12 (Streets, Sidewalks, and Utilities), Title 13 (Water and Sewers), and Title 15 (Buildings and Construction) of the Pittsburg Municipal Code as determined by the City Engineer. Issuance of a site development permit will be required whereby specific engineering requirements will be made as conditions of approval.
102. The design and construction of storm drain, water, and sewer facilities shall be in accordance with Section 17.28.020 of the Pittsburg Municipal Code.
103. The developer shall comply with all the requirements of the Community Development Department, including the Planning Division, Engineering Division, and Building Division, the Contra Costa Department of Environmental Health, the Contra Costa County Fire Protection District, the Contra Costa County Flood Control & Water Conservation District, the California Regional Water Quality Control Board, and all other applicable local, state and federal agencies. It is the responsibility of the applicant to check with each agency for requirements that may pertain to the project.
104. Developer agrees to indemnify, defend, and hold harmless the City, its officials, officers, employees, agents and consultants from any and all administrative, legal or equitable actions or other proceedings instituted by any person challenging the validity of this project approval, subsequent project approval, or other action arising out of, or in connection with, this project approval. The parties shall cooperate in defending such action or proceeding. The parties shall use reasonable efforts to select mutually agreeable defense counsel but, if the parties cannot reach agreement, City may select its own legal counsel at developer's sole cost and expense. Developer may select its own legal counsel to represent

developer's interests at developer's sole cost and expense. Developer shall pay for City's costs of defense, whether directly or by timely reimbursement to City on a monthly basis. Such costs shall include, but not be limited to, all court costs and attorneys' fees expended by City in defense of any such action or other proceeding, plus staff and City Attorney time spent responding to and defending the claim, action or proceeding.

105. The conditional design review approval of architectural plans and elevations will expire 36 months after the adoption of this resolution, unless a building permit or grading permit has been issued or a written request for extension is filed with the Planning Division prior to the expiration date and subsequently approved by the Planning Commission. The approval shall be valid for no more than six months from the date of building or grading permit issuance unless work is commenced and diligently pursued prior to the expiration of the building or grading permit.

The Planning Commission DOES RESOLVE as follows:

Section 1. Background

- A. On June 18, 2018, Mandy Leung of William Lyon Homes, Inc., filed Planning Application No. AP-18-1348, requesting approval of: 1) a zoning map amendment rezoning the site from a combination of RH-P (High Density Residential with a Master Plan Overlay) and CO-P (Office Commercial with a Master Plan Overlay) Districts to PD (Planned Development) District; 2) a vesting tentative map subdividing the 57.81-acre site to allow for the construction of a 346-unit, single family development as well as a 12-acre commercial site; and 3) design review of architectural and landscape plans. The project site is located along the north side of West Leland Road, south of State Route 4. Assessor's Parcel Nos. 097-700-001; 097-700-002; and 097-700-005.
- B. The proposed project is governed by the applicable goals and policies of the Pittsburg General Plan, the Pittsburg Municipal Code (PMC), and the City's Design Review and Development Guidelines adopted by Planning Commission through Resolution No. 9864.
- C. On October 18, 2004, the City Council adopted Resolution No. 04-10168 certifying that the Final Environmental Impact Report (2004 FEIR) for the Vista Del Mar project (SCH # 2004012097) was prepared in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines. On November 29, 2004, after having reviewed and considered the environmental documentation prepared for the Vista Del Mar project, the City Council adopted Resolution No. 04-10191, approving CEQA findings, adopting a Statement of Overriding Considerations, and a Mitigation and Monitoring and Reporting Program (MMRP) for the Vista Del Mar project. The 2004 FEIR certified by the City Council included a programmatic plan for the Aves Ranch site.
- D. On January 20, 2009, the City Council adopted Ordinance No. 08-1312, approving the Alves Ranch Master Plan and an EIR addendum. The previously

approved master plan contemplated up to 560 residential units, as well as up to 14 acres of office commercial space.

- E. Since adoption of the Alves Ranch Master Plan, the project proposal for the site has been further refined based on current market conditions, as well as the desire of residents for additional retail commercial opportunities within the area of the City west of Bailey Road.
- F. On November 7, 2017, the proposed project was discussed by the Land Use Subcommittee. The Subcommittee was generally supportive of the modifications and amendment to the previous affordable housing requirement specified within the Development Agreement in exchange for reduced density, additional commercial acreage, and prioritization of development of the commercial portion of the project.
- G. Pursuant to PMC section 17.16.100, an applicant may request that two or more applications for separate discretionary approvals, including zoning amendments under Title 18 of this Code, requested or required in conjunction with a project be consolidated.
- H. PMC section 18.16.020 identifies the Planning Commission as the advisory body to the City Council on proposed zoning changes, and requires that the Commission determine, prior to making its recommendation, that:
  - 1. the change proposed is consistent with the objectives, policies, general land uses, and programs specified in the General Plan and applicable specific plan;
  - 2. a community need is demonstrated for the change proposed; and
  - 3. its adoption will be in conformity with public convenience, general welfare and good zoning practice.
- I. PMC section 17.12.010 identifies the Planning Commission as the advisory body to the City Council on proposed tentative maps when consolidated with one or more applications for other approvals which are subject to final approval by the City Council. In order to recommend City Council approval of a vesting tentative map, the Commission must determine, in accordance with PMC section 17.20.060(c), that:
  - 1. the proposed map is consistent with the general plan and any applicable specific plan, or other applicable provision of PMC;
  - 2. the site is physically suitable for the type of development;
  - 3. the site is physically suitable for the proposed density of development;

4. the design of the subdivision or the proposed improvements will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;
  5. the design of the subdivision or the type of improvements will not cause serious public health problems; and
  6. the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision.
- J. Pursuant to PMC section 18.36.230, the Planning Commission shall discuss the application for design review approval and integrate it with the land use approval process applicable to the project. In order to recommend design review approval (pursuant to the direction of PMC 18.36.230), the Commission must determine, in accordance with PMC section 18.36.220.B, that:
1. the structure conforms with good taste, good design and in general contributes to the character and image of the City as a place of beauty, spaciousness, balance, taste, fitness, broad vistas, and high quality;
  2. the structure will be protected against exterior and interior noise, vibrations and other factors that may tend to make the environment less desirable;
  3. the exterior design and appearance of the structure is not of inferior quality as to cause the nature of the neighborhood to materially depreciate in appearance and value;
  4. the structure is in harmony with proposed developments on land in the general area; and
  5. the application conforms with the criteria set forth in any applicable City adopted design guidelines.
- K. The proposed project is subject to the California Environmental Quality Act (CEQA), and the State CEQA Guidelines (Public Resources Code section 21080). Since the proposed amendments to the previously adopted Alves Ranch Master Plan are consistent with the development program originally reviewed in the 2004 EIR (as described above), an Addendum to the 2004 EIR was prepared pursuant to CEQA Guidelines section 15164 ("Addendum to an EIR or Negative Declaration").
- L. On or prior to August 4, 2018, in accordance with Government Code sections 65090 and 65091, and PMC section 18.14.020.B, C and D, a "Notice of Public Hearing," for the August 14, 2018, public hearing on this item was published in

the East County Times; was posted at City Hall; was delivered for posting at the Pittsburg Library; and was mailed via first class or electronic mail to the applicant, to the property owner, to owners of property located within 300 feet of the proposed project site, to local service agencies whose services might be affected by this project, and to individuals who had previously filed written request for such notice.

- M. On August 14, 2018, the Planning Commission continued the public hearing on this item to August 21, 2018.
- N. On August 21, 2018, the Planning Commission held a public hearing on Planning Application No. AP-18-1348 (RZ, SUBD, DR), at which time additional oral and/or written testimony was considered.

## Section 2. Findings

- A. Based on the Planning Commission staff report entitled, "Consideration of a Resolution Recommending City Council Approval of the Alves Ranch Subdivision and Master Plan, AP-18-1348 (RZ, SUBD, DR)," dated August 21, 2018, and based on all the information contained in the Planning Division files on the project, incorporated herein by reference and available for review in the Planning Division located at 65 Civic Avenue in Pittsburg, and based on all written and oral testimony presented at the public hearing, the Planning Commission finds that:
  - 1. All recitals above are true and correct and are incorporated herein by reference.
  - 2. Since the project proposal for the Alves Ranch site has been further refined from what was originally reviewed in the 2004 EIR (as described above), preparation of an Addendum to the 2004 EIR pursuant to CEQA Guidelines section 15164 ("Addendum to an EIR or Negative Declaration") is the appropriate method for achieving CEQA compliance for the current project.

## Rezoning:

- 3. The proposed rezoning is consistent with the objectives, policies, general land uses, and programs specified in the General Plan, in that:
  - a. The proposed rezoning of the site from a combination of RH-P (High Density Residential with a Master Plan Overlay) and CO-P (Office Commercial with a Master Plan Overlay) Districts is consistent with the existing General Plan land use designations of Business Commercial and High Density Residential. The existing land use designations represent a prescribed development program which is intended to be planned, mixed-use, transit-oriented village,

with a prescribed maximum number of residential units and Business Commercial acreage (Policies 2-P-89 and 2-P-92). The proposed PD (Planned Development) District is intended to support development of the Alves Ranch Residential Development, which is consistent with the intended function of the site and prescribed development program. The project proposes an overall residential density of approximately 14 dwelling units per acres, consistent with the prescribed density of the High Density Residential Land Use Designation.

- b. The project will be developed on an infill site, thereby helping the City maintain a compact urban form (Goal 2-G-1).
- c. The project will provide higher-density single-family residential units in an area near public transit (Goal 2-G-4). The project site is within a half-mile distance of the Pittsburg/Bay Point BART Station and directly adjacent to two bus stops located near the intersection of Alves Ranch Road and West Leland Road.
- d. The project will expand Pittsburg's housing diversity by providing higher-density single-family development on smaller lots ranging from approximately 1,686 to 4,645 square feet, with a variety of traditional detached units, alley-loaded detached units, and attached "duet-style" units (Goal 2-G-5 and Housing Goal G-1).
- e. The project will utilize a Planned Development (PD) zoning, in part, to achieve a high-quality design outcome (Policy 2-P-5).
- f. The project will provide an 34,848-square-foot recreation area, complete with a bocce court, basketball court, BBQs, and seating areas as a community amenity within the planned development (Policy 2-P-6). A condition of approval will require the developer also install a covered seating area, drinking fountains, and waste receptacles.
- g. The project will pay its share of the costs for the construction of facilities needed to serve the development (Policy 3-P-1, 3-P-13, and 7-P-2). It will comply with conditions of approval requiring payment of the Facilities Reserve Charge, Local Traffic Mitigation Fee (LTMF), and Regional Transportation Development Impact Mitigation Fee (RTDIM) in accordance with the PMC.
- h. The project will be built in an area where public facilities and infrastructure are already available (Policy 3-P-1).
- i. The existing transportation system has adequate capacity to

accommodate the proposed development (Policy 3-P-2). Residents of the proposed development will have multiple transportation options available to them as the site is located near BART, Tri-Delta Transit, and bicycle lanes.

- j. A traffic impact study was prepared as part of the 2004 Vista Del Mar EIR, which analyzed development of up to 563 residential units and over 250,000 square feet of commercial area. An updated Trip Generation Analysis and revised Site Access and Circulation Assessment was prepared as part of the proposed project to ensure the proposed project is consistent with the previously prepared traffic impact study (Policy 3-P-5).
- k. The project will provide safe and contiguous routes for pedestrians and bicyclists (Policy 3-P-17, 7-P-34, and 7-P-40). While a Class II bicycle facility exists along the project frontage, as part of the proposed project, the developer has proposed a combination of a Class I bicycle facility and temporary path along the southern boundary of the project site, connecting to existing sidewalks on either side. In addition, a condition of approval will require the developer provide a separate Class I trail at a point along the eastern boundary of the site, which will potentially connect to a future Class I trail across the vacant parcel to the east.
- l. The project will encourage walking as a regular means of transportation due to the site's proximity to various amenities (Goal 7-G-15). The project site is within a half-mile distance of BART, existing commercial opportunities along Bailey Road and San Marco Boulevard, Ray Giacomelli Park, and a future Mt. Diablo Unified School District school site. In addition, the project will designate an approximately 12-acre commercial parcel, which, when developed, will allow for additional commercial opportunities within walking distance of the proposed development, but also existing developments in the area, further encouraging walking as a means of transportation in the area.
- m. The project will provide an approximately 0.8-acre recreation area that is centrally located and within reasonable walking distance of all homes in the subdivision (Policy 8-P-2).
- n. The project will equitably share the costs associated with providing water and wastewater services to the subdivision through payment of the Pittsburg Facilities Reserve Charge (Policy 11-P-7 and 11-P-18).
- o. The project will provide sound walls adjacent to all homes along the

northern perimeter of the site to help ensure interior noise levels do not exceed 45 dB CNEL (Policy 12-P-6).

- p. The project site being rezoned is vacant, underutilized, and deemed appropriate for higher-density residential use given its proximity to parks, transit, and commercial amenities (Housing Element Policy P-1.1 B).
  - q. The project will provide market-rate and above-market-rate housing and increase demand for economic activity in nearby shopping centers (Housing Policy P-1.2).
  - r. The project will provide at least ten single-family homes with accessory dwelling units that will allow extended families to live near each other, increase the affordable and rental housing stock, and provide income assistance to homeowners (Housing Policy P-1.5).
  - s. The project will help attain the City's Regional Housing Needs Allocation for moderate and above-moderate income households (Policy P-1.6).
  - t. The project will comply with conditions of approval requiring construction of quality home designs to ensure future residents will enjoy an attractive living environment (Housing Goal G-5 and Policy P-5.1).
4. There is a community need for the proposed zoning change, in that the amendment will facilitate occupancy of a long-standing vacant site in accordance with the City's housing goals calling for development of a variety of housing types, densities, and prices to balance the City's housing stock and to meet Pittsburg's regional fair share housing needs for people of all income levels. Providing 346 small-lot, market-rate and above residential units along with multiple accessory units which are determined to be affordable by design at the site will provide diverse housing options for residents and create an opportunity for more residents to utilize the Pittsburg/Bay Point BART Station and other public transit opportunities.
5. The proposed zoning amendment will be in conformity with public convenience, general welfare, and good zoning practice, in that the amendment will facilitate development of a long-standing vacant site, which could help to eradicate existing problems that come with vacant sites, such as illegal dumping and loitering. Additionally, the proposed project will add additional residents to the area who may frequent the established and potential commercial uses envisioned in the area. In

addition, the site's proximity to both the Pittsburg/Bay Point BART Station and two existing bus routes presents an opportunity for more residents to utilize public transit opportunities.

Subdivision:

6. The proposed vesting tentative subdivision map is consistent with the existing General Plan land use designation of Business Commercial and High Density Residential, as described in section 2.A.3.a, above.
7. The project site is physically suitable for the type of development proposed in that the site is relatively flat, vacant, and surrounded by existing infrastructure, minimizing the amount of work and investment needed to extend utilities and services to the site.
8. The project site is physically suitable for the proposed density of development, in that the site is flat, vacant, and surrounded by existing, established development. Further, the site is located within one-half mile of the Pittsburg/Bay Point BART Station and adjacent to two existing bus routes, making it an appropriate location for a high-density residential development, as defined by the City's General Plan.
9. The design of the proposed subdivision and accompanying improvements will not cause substantial environmental damage or substantially and unavoidably injure fish or wildlife or their habitat, in that the project will comply with the applicable mitigation measures identified in the 2004 Vista Del Mar EIR (SCH # 2004012097).
10. The design of the subdivision and type of improvements proposed will not cause serious public health problems. Site improvements have been, or shall be required to be, designed to meet City standards, as detailed in the conditions of approval. The residential project does not involve heavy manufacturing or other industrial uses that might generate high levels of pollution emissions and the site is not located in close proximity to any stationary source polluters.
11. The design of the subdivision and type of improvements will not conflict with easements, acquired by the public at large, for access through or use of the property within the proposed subdivision, in that there are no existing public access easements on the site. The proposed map does include a new public street that will connect the development to existing public roadways, and the new street will be of sufficient width to accommodate automobile and emergency vehicle access into and around the site.

Design Review:

12. The proposed project conforms with good taste, good design and in general contributes to the character and image of the City as a place of beauty, spaciousness, balance, taste, fitness, broad vistas, and high quality, in that the proposed house models feature an attractive architectural design characterized by a mixture of hipped and gable-end roofs with high-quality, composite shingle roofing material; stucco siding with horizontal trim, corbels, and simulated stone veneer; and articulated front porch entryways. The proposed project will also provide an attractive outdoor environment for residents. The developer will install a variety of colorful, drought-tolerant landscaping within common areas and outside of homes, and a condition of approval will require a decorative, masonry sound wall with wall caps designed to mimic the existing sound wall along the south side of West Leland Road, adjacent to the Vista Del Mar project. Residential front yards will feature drought-tolerant plants and blooming street trees that will provide seasonal color throughout the subdivision.
13. The proposed project will be protected against exterior and interior noise, vibrations and other factors which may tend to make the environment less desirable, in that the project will be built to standard building codes that dictate maximum noise levels for the interiors of residential units. The developer will also be required to install a sound wall along the northern or southern property lines of residential lots nearest West Leland Road or State Route 4, as applicable.
14. The exterior design of the proposed project is not of inferior quality as to cause the nature of the neighborhood to materially depreciate in appearance and value. Rather, the proposed project will enhance the neighborhood's appearance and value, in that it will result in a highly attractive environment utilizing a variety of compatible house and front yard landscape designs. The Alves Ranch Project will add value to the community by attracting additional residential and commercial investment in the area.
15. The proposed project is in harmony with proposed developments on land in the general area, in that the home designs are intended to complement the existing Vista Del Mar project to the south.
16. The proposed project will substantially conform to the applicable Development Review Design Guidelines (DRDG, Planning Commission Resolution No. 9864) for single-family development if conditions are added requiring the developer to: a) provide split face block walls with pilasters at intervals of 25 feet or less along West Leland Road; b) provide screening for utility boxes, transformers, backflow preventers, meters, and junction boxes; c) provide, as part of the options package for homebuyers,

solar panels or an option offering pre-wiring for solar panels; d) proposed landscaping be required to meet the standards set forth in PMC Section 18.84.310; and e) provide cool roofs for reduction of heat island effect or installation of solar panels, consistent with DRDG sections 1.c, 2.b through 2.d, 2h, and 6.A.1 through 6.A.2, 6.A.4, and 6.A.6.

- B. The Staff Report entitled, "Consideration of a Resolution Recommending City Council Approval of the Alves Ranch Subdivision and Master Plan, AP-18-1348 (RZ, SUBD, DR)," dated August 21, 2018, is referenced hereto as additional support for findings.

### Section 3. Decision

Based on the findings and the authority set forth above, the Planning Commission hereby recommends that the City Council:

- A. Adopt an ordinance to: 1) adopt an EIR Addendum for the Alves Ranch Development, as shown as Exhibit A to this resolution; and 2) amend the Zoning Map, as referenced in Pittsburg Municipal Code, Title 18 ("Zoning") section 18.04.020, to change the zoning of the properties described in section 1.A above, from a combination of RH-P and CO-P Districts to PD District, and adopting specific development standards as substantially presented in Exhibit B of this resolution.
- B. Adopt a Resolution to approve Vesting Tentative Map 9235, and design review for plans construct 346 single-family homes, subject to the conditions as substantially presented in Exhibit C of this resolution.

### Section 4. Effective Date

This resolution shall take effect immediately upon its adoption.

On motion by Commissioner Ward, seconded by Commissioner S. Foster, the foregoing resolution was passed and adopted the 21<sup>st</sup> day of August, 2018, by the Planning Commission of the City of Pittsburg, California by the following vote:

AYES: Fields, S. Foster, Ward

NAYES: D. Foster

ABSTAIN:

ABSENT: Coniglio, Linde, Robinson

I hereby certify that the above Resolution No. 10102 was adopted by the Planning Commission of the City of Pittsburg on August 21, 2018.

A handwritten signature in black ink, appearing to read "Jordan Davis", is written over a horizontal line.

## SECTION 1: INTRODUCTION

This Addendum, checklist, and attached supporting technical reports and other documents have been prepared to determine whether and to what extent the *2004 Vista Del Mar Project Final Environmental Impact Report* (“2004 FEIR” State Clearinghouse No. 2004012097), prepared for the City of Pittsburg remains sufficient to address the potential impacts of the proposed 2018 Alves Ranch development (“Master Plan Amendment” (“2018 proposed project”)), or whether additional documentation is required under the California Environmental Quality Act (CEQA) (Pub. Resources Code, Section 21000, et seq.). The proposed project would be located at the project site (as that term is defined below), which is located within the area previously evaluated in the 2004 FEIR.

### 1.1 - Initial Study/Environmental Checklist

Pursuant to Public Resources Code Section 21166, and *CEQA Guidelines* Sections 15162 and 15164, subd. (a), this Addendum, checklist, and attached supporting documentation have been prepared to evaluate the 2018 proposed project and compare it to the 2004 EIR findings to determine whether any additional environmental review under CEQA is triggered. This Addendum, checklist, and attached supporting documentation use the standard environmental checklist categories provided in Appendix G of the *CEQA Guidelines*, but provides answer columns for evaluation consistent with the considerations listed under *CEQA Guidelines* Section 15162, subd. (a).

### 1.2 - Environmental Analysis and Conclusions

*CEQA Guidelines* Section 15164, subd. (a) provides that the lead agency or a responsible agency shall prepare an addendum to a previously certified Environmental Impact Report (EIR) or Negative Declaration (ND) if some changes or additions are necessary but none of the conditions described in *CEQA Guidelines* Section 15162 calling for preparation of a subsequent or supplemental EIR or ND have occurred (*CEQA Guidelines*, Section 15164, subd. (a)).

An addendum need not be circulated for public review but can be included in or attached to a final EIR or ND (*CEQA Guidelines* Section 15164, subd. (c)). The decision-making body shall consider the addendum with the final EIR prior to making a decision on the project (*CEQA Guidelines* Section 15164, subd. (d)). An agency must also include a brief explanation of the decision not to prepare a subsequent or supplemental EIR or ND pursuant to Section 15162 (*CEQA Guidelines* Section 15164, subd. (e)).

Consequently, once a final EIR or ND has been certified for a project, no subsequent or supplemental EIR or ND is required under CEQA unless based on substantial evidence:

- 1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or ND . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;<sup>1</sup>

<sup>1</sup> CEQA Guidelines Section 15382 defines “significant effect on the environment” as “. . . a substantial, or potentially substantial

- 2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or ND . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- 3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the ND was adopted. . . shows any of the following:
  - a. The project will have one or more significant effects not discussed in the previous EIR or ND or negative declaration;
  - b. Significant effects previously examined will be substantially more severe than shown in the previous EIR or ND;
  - c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
  - d. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR or ND would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative (CEQA Guidelines, Section 15162, subd. (a); see also Pub. Resources Code, Section 21166).

This Addendum analyzes the proposed project in the context of the 2004 FEIR as required by CEQA. This Addendum, checklist, and attached supporting documentation constitutes substantial evidence supporting the conclusion that preparation of a supplemental or subsequent EIR is not required prior to approval of the proposed project and related approvals by the City, and provides the required documentation under CEQA.

This Addendum addresses the conclusions of the 2004 FEIR.

### 1.2.1 - Findings

The City of Pittsburgh certified a Final EIR for the Vista Del Mar development, which includes the site of the 2018 proposed project, on October 18, 2004. On November 29, 2004, the City adopted Resolution No. 04-10191 approving the required CEQA findings, adopting a Statement of Overriding Considerations, and approving a Mitigation, Monitoring and Reporting Program (MMRP). On January 20, 2009, the City approved an addendum to the 2004 FEIR (“2008 Addendum”) making minor modifications to the Vista Del Mar development previously studied in the 2004 FEIR and approving a Master Plan for the project site. In addition, on April 16, 2012, the City adopted Resolution No. 12-11800, approving a 2<sup>nd</sup> addendum to the 2004 FEIR (“2012 Addendum”) making minor modifications to the approved land uses within the Vista Del Mar development along the south side of West Leland Road previously studied in the 2004 FEIR.

---

adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance . . .” (see also Public Resources Code, Section 21068).

Since the 2018 proposed project would make minor modifications to the project that was originally reviewed in the 2004 FEIR and 2008 Addendum and approved in 2009, preparation of an addendum to the 2004 FEIR pursuant to *CEQA Guidelines* section 15164 (“Addendum to an EIR or Negative Declaration”) is the appropriate method for achieving CEQA compliance for the 2018 proposed project. This Addendum analyzes the 2018 proposed project revisions’ potential environmental impacts as they compare to the environmental analysis in the 2004 FEIR and, where necessary, for a full discussion of impacts, by comparing the proposed project to the modified development proposal approved in 2009 pursuant to the 2008 Addendum.

As described more fully herein, there are no substantial changes contemplated by the proposed project or in the circumstances in which the proposed project will be undertaken that require major revisions of the 2004 FEIR. The proposed revisions do not require preparation of a new subsequent or supplemental EIR, due to either the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. As illustrated herein, the proposed project and its associated impacts are consistent with those analyzed in the 2004 FEIR, and would involve only minor changes to the development evaluated in the 2004 FEIR; therefore, an addendum is appropriate CEQA compliance for the proposed project.

### 1.2.2 - Conclusions

The City of Pittsburg may approve the proposed project based on this Addendum. The impacts of the proposed project remain consistent with the impacts previously analyzed in the 2004 FEIR, and would not result in any new significant impacts or an increase in the severity in previously identified significant impacts (*CEQA Guidelines* Section 15164).

## 1.3 - Mitigation Monitoring Program

As required by Public Resources Code Section 21081.6, subd. (a)(1), an MMRP has been prepared for the proposed project in order to ensure the enforceability and monitor the implementation of the mitigation measures that have been adopted for the proposed project through a project-specific MMRP (see attached Appendix I). Any long-term monitoring of mitigation measures imposed on the overall Vista Del Mar development evaluated in 2004 (and again in 2008 and 2012), separate and apart from the proposed project, will be implemented through the 2004 FEIR MMRP.

THIS PAGE INTENTIONALLY LEFT BLANK

## SECTION 2: PROJECT DESCRIPTION

### 2.1 - Location and Setting

#### 2.1.1 - Location

The project site is located within the southwest portion of the City of Pittsburg, Contra Costa County, California (Exhibit 1). The project site consists of approximately 57.81 acres and is bounded by California State Route 4 (SR 4) on the north, West Leland Road and the Vista Del Mar Subdivision to the south, the San Marco development, containing residential developments of varying densities, on the west, and an undeveloped area on the east (Exhibit 2). The site is approximately 0.5 miles from the Pittsburg/Bay Point BART Station to the east. In addition, the Keller Canyon Landfill is located approximately 1.5 miles to the southeast of the project site, and a Pacific Gas & Electric (PG&E) transmission line easement is located 1,200 feet to the south of the project site.

#### 2.1.2 - Characteristic of Existing Project Site

The northern boundary of the site, south of SR 4, includes a slight slope gradient between the project site and the highway. There are no notable creeks or ridgelines located on the project site, but intermittent drainage ditches are located throughout and there is evidence of previous grading activity. Along the northern side of the project site is an approximately 7-acre detention basin. Most of the surrounding area is developed with a mix of residential and commercial uses in various densities.

#### 2.1.3 - General Plan and Zoning

The site of the proposed project was originally part of a larger property purchased in 1917 by Virginia Alves for use as a cattle ranch and grazing land. The Alves property served many purposes over the years, including manufacturing, commercial, and ranching endeavors. In 2001, the City of Pittsburg adopted a comprehensive General Plan update designating the Alves property for future development with a mix of open space, residential, and commercial uses. Specifically, the *2001 City of Pittsburg General Plan* ("General Plan") and its accompanying certified EIR anticipated development in Alves Ranch as follows (General Plan Policy 2-P-89.):

- Up to 306 Hillside Low and Low Density units, and 794 Medium and High Density residential units; and,
- Up to 20 acres of Business Commercial between West Leland Road and State Route 4.

The General Plan land use designation for the project site is a combination of *Business Commercial and High Density Residential*. The western portion of the project site is zoned CO-P (Office Commercial with a Master Plan Overlay, Ordinance No. 04-1230) District and the remaining portion of the project site is zoned RH-P (High-Density Residential with a Master Plan Overlay, Ordinance No. 04-1230). The proposed project's design requires a minor modification to the location of some portions of the residential and commercial uses; however, the overall proposed land uses and residential density remain consistent with the development program identified for the Alves site as dictated by the General Plan land use designations (General Plan Figure 2-2) and the Southwest Hills

planning area diagram (General Plan Figure 2-4K). Relevant General Plan Goals and Policies are incorporated throughout the 2004 FEIR and related mitigation measures and remain applicable to this analysis since the proposed project would be required to adhere to all relevant General Plan Policies and Goals.

## 2.2 - Project Background

### 2.2.1 - 2004 Vista Del Mar Certified EIR

In 2004, William Lyon Homes, Inc. and Alves Ranch, LLC submitted a plan to develop approximately 293-acres of the Alves' property as a residential and commercial subdivision, known as the Vista Del Mar development. The 2004 Vista Del Mar project anticipated approximately 1,100 housing units, approximately 257,500 square feet of commercial floor space, an approximately 11.33-acre school/park site, approximately 117.68 acres of permanent hillside open space, associated landscaped buffers, public and private roadways, a detention basin, a water tank site, and a water pump station site. The City prepared the 2004 FEIR to analyze the potential environmental impacts associated with the Vista Del Mar development.

The 2004 EIR contemplated high density residential, business commercial, and detention basin land uses on the 57.81-acre project site north of West Leland Road. The 2004 EIR assumed that the northern portion of the Vista Del Mar development (i.e. the 2018 proposed project site) would include 563 housing units on 32.1 acres and 257,500 square feet of commercial building space on 14.78 acres, along with a 7.56-acre detention/water quality control basin site.

The 2004 EIR identified the significant environmental effects that could result from implementation of the development as well as the ways in which those impacts could be feasibly reduced to less than significant levels, either through the imposition of mitigation measures or through the implementation of specific alternatives. After a detailed analysis and implementation of relevant mitigation measures, the City identified a total of nine significant but unavoidable impacts associated with the 2004 Vista Del Mar development project:

- visual factors (one significant unavoidable impact);
- traffic and circulation (five significant unavoidable impacts);
- cultural and historic resources (one significant unavoidable impact);
- noise (one significant unavoidable impact); and
- air quality (one significant unavoidable impact).

The City concluded that the Vista Del Mar development was generally consistent with the land use designations in the Pittsburgh General Plan and, on October 18, 2004, certified the 2004 Final EIR (FEIR) for the Vista Del Mar development. On November 29, 2004, the City adopted Resolution No. 04-10191 approving CEQA findings, adopting a Statement of Overriding Considerations, and a Mitigation, Monitoring and Reporting Program (MMRP).

After certifying the 2004 FEIR, the City granted a General Plan Amendment to change the distribution of residential densities within the Vista Del Mar development area, executed a development agreement, and amended the zoning for the entire 293-acre site.

CITY OF PITTSBURG • ALVES RANCH PROJECT  
3RD ADDENDUM TO THE 2004 VISTA DEL MAR EIR

THIS PAGE INTENTIONALLY LEFT BLANK

### 2.2.2 - 2008 “Alves Ranch Addendum #1” and 2009 Revised Project

In August 2008, a revised development plan was proposed for the approximately 57.81-acre portion of the 2004 Vista Del Mar development, located north of West Leland Road. These changes contemplated development of up to 308 multifamily units (including 93 affordable housing units), and 170 single-family detached units (478 units total) on 31.7 acres; the plan also included 221,500 square feet of commercial floor space on approximately 14.0 acres. The 2008 development plan required the approval of: 1) a rezoning to establish a Development Master Plan, 2) a vesting tentative subdivision map, and 3) design review. An addendum was prepared to analyze whether the proposed changes were adequately addressed in the 2004 FEIR (“2008 Addendum”). The 2008 Addendum concluded that the revised development plan would contribute to eight of the nine significant unavoidable impacts identified in the 2004 FEIR; however, none of the significant unavoidable impacts involved a new significant impact or a more severe significant impact than those previously identified and addressed in the statement of overriding considerations accompanying the 2004 FEIR. The City considered, but did not approve, the 2008 Addendum in the fall of 2008.

After the preparation of the 2008 Addendum, the City and the applicant continued to refine the revised development plan, making minor changes to the site plan and project design before approving the revisions and the 2008 Addendum on January 20, 2009 (Ordinance No. 08-1312). Differences between the proposal originally analyzed in the 2008 Addendum, and the development ultimately approved by the City on January 20, 2009, were addressed in a letter attached to the 2008 Addendum, dated December 2008. Consistent with the 2004 FEIR, the January 20, 2009, approval ultimately anticipated the development of up to 560 housing units (a slight decrease from the 563 units analyzed in the 2004 FEIR), a 0.6-acre recreational facility, and 221,500 square feet of commercial floor area (a slight decrease from the originally approved 257,000 square feet analyzed in the 2004 FEIR).

### 2.2.3 - 2012 “Vista Del Mar Addendum #2” and 2012 Revised Project

In 2012, the City adopted a second addendum to the 2004 FEIR that analyzed a request to amend the General Plan designations of approximately 20.4 acres of land within the Vista Del Mar development. The amendment changed the 20.4 acres from *Low Density Residential* or *Hillside Low Density Residential* to *Open Space*, and also amended the adopted PD Plan (PD 04-1230) to reflect the changes of the two locations from “Single Family Residential” and “Estate Lots” to “Open Space.” These areas were subsequently included in the Geological Hazard Abatement District (GHAD) established to address and appropriately mitigate the identified geotechnical hazards within the Vista Del Mar development area.

This Vista Del Mar Addendum #2 (“2012 Addendum”) affected the portion of the Vista Del Mar development area south of West Leland Road, which does not involve the project site and thus is not under consideration within this addendum document; however, it suffices as the second addendum document to the 2004 FEIR.

William Lyon Homes is now requesting additional modifications to the initial project design analyzed in the 2004 FEIR and the revised design analyzed in the 2008 Addendum and the 2012 Addendum, as described more fully in Section 2.3, Project Characteristics.

## 2.3 - Project Characteristics

### 2.3.1 - Project Summary

The proposed project consists of the development of the approximately 57.81-acre project site north of West Leland Road with 346 housing units on approximately 25.93 acres and up to 140,000 square feet of retail/commercial uses, including a grocery store of approximately 40,000 square feet, on approximately 12.0 acres. The proposed project also proposes to relocate the retail/commercial uses to the center of the project site, with residential uses to be located on the northern, eastern, and western edges.

As anticipated in the 2004 FEIR, the proposed project includes a detailed development plan for the project site (excluding the detention basin area). Table 1 provides a summary and comparison of the proposed project with the 2004 FEIR land use assumptions, as well as the development plan revisions analyzed in the 2008 Addendum. As shown in Table 1, the proposed project as currently envisioned involves less development than was evaluated and disclosed in the 2004 FEIR and the 2008 Addendum. Exhibit 2 illustrates the preliminary site plan for the proposed project.

**Table 1: Summary of Proposed Project Changes for the Project Site between 2001 and 2018**

| Planning Document                    | Residential Acres | Residential Units | Overall Residential Density | Commercial Floor Area                                                                                |
|--------------------------------------|-------------------|-------------------|-----------------------------|------------------------------------------------------------------------------------------------------|
| 2001 City of Pittsburgh General Plan | —                 | 1,100             | —                           | * The General Plan anticipates up to 20 acres of Business commercial development in the project area |
| 2004 Final EIR                       | 32.10             | 563               | 17.54                       | 257,000 on 14.78 acres                                                                               |
| 2008 Addendum                        | 31.66             | 478               | 15.10                       | 221,500 on 13.98 acres                                                                               |
| 2009 Approved Project                | 31.66             | 560               | 17.70                       | 221,500 on 13.98 acres                                                                               |
| 2012 Addendum and Approved Project   | N/A               | N/A               | N/A                         | N/A                                                                                                  |
| 2018 Proposed Project                | 25.93             | 346               | 13.34                       | 140,000 on 12 acres                                                                                  |

The specific differences between the 2004 FEIR development and the proposed project are described in more detail below.

### 2.3.2 - Proposed Land Uses

**Residential.** The proposed project contemplates a total of up to 346 housing units, as well as 10 accessory dwelling units (ADUs), on approximately 25.5 acres, for an overall residential density of approximately 14 units per acre. As shown on the preliminary site plan (Exhibit 3), the proposal provides for a range of housing types and densities, including:

- 136 “Duet” units on approximately 7.1 acres, for a gross density of 19.15 units per acre;
- 110 “Alley” units on approximately 9.2 acres, for a gross density of 11.96 units per acre; and
- 100 “Traditional” units, as well as 10 ADUs, on approximately 9.2 acres, for a gross density of 10.87 units per acre.

Source: WHA Architects, Planners, Designers.

THIS PAGE INTENTIONALLY LEFT BLANK

The 2004 FEIR previously identified a 32.1-acre RH-D (High Density Residential) District area and provided for development of 563 residential units with an overall residential density of 17.53 units per acre. The 2008 Addendum analyzed the reduced development of 478 units in the project area for an overall density of 15.10 units per acre, but the City ultimately approved 560 units with a density of 17.70 units per acre.

The proposed project includes fewer single-family attached units (393 compared to 136 units) and slightly more single-family detached lots (167 compared to 210). Overall, the proposed project includes 214 fewer housing units and a lower overall residential density compared to the 2009 approval.

The location of residential uses would be adjusted, as compared to the location identified in the 2004 FEIR and the 2009 approval. As shown in Exhibit 3, Neighborhoods A2 (comprising 60 units) and D (comprising 100 units) would be located along the western side of the project site, which is currently zoned CO-P District. This change would improve circulation, site accessibility, and compatibility with neighboring residential uses; however, it would require a zoning change/master plan amendment to allow residential development in this area.

**Residential Open Space and Trails.** The proposed project contemplates several open space areas. A total of approximately 0.9 acre for pedestrian circulation and/or active recreation and a total of approximately 1.28 acres of landscaped and irrigated open space are contemplated. The open space areas would be owned and maintained by the homeowners association(s) of the adjoining neighborhoods.

As part of the proposed project, an approximately 12-foot-wide Class I trail would be constructed on the north side of West Leland Road along the project frontage, connecting to an existing sidewalk to the west. Therefore, subsequent to the completion of the proposed project, the sidewalk gap would be reduced to approximately 1,100 feet on the north side of West Leland Avenue between Woodhill Drive and the BART access roadway. Class II bicycle facilities are provided on West Leland Road, which would not be altered as a result of the proposed project.

**Retail/Commercial.** The proposed project contemplates approximately 140,000 square feet of general commercial uses on approximately 12 acres. As part of the retail/commercial component, the proposed project contemplates approximately 40,000 square feet for development of a grocery store. The retail/commercial portion of the proposed project would be relocated from the western side to the center of the site. Circulation would be modified to accommodate this revision.

The 2004 FEIR included 257,500 square feet of business commercial floor area on 14.78 acres and the 2008 Addendum analyzed 221,500 square feet of business commercial floor area on 13.98 acres. The proposed project would therefore remain within the square footages evaluated and disclosed in the 2004 FEIR and the 2008 Addendum, and would remain consistent with the land uses anticipated in the 2001 General Plan.

**Utility Infrastructure.** The capacity of the existing stormwater detention facility on-site would be increased to a total of approximately 6.2 acre-feet as part of the proposed project design to

accommodate anticipated stormwater peak discharges. The increase in capacity will be accomplished by raising the outfall by 2 feet, thereby accommodating more water in the facility.

**Roadway Infrastructure.** Access to the residential portion of the project site is proposed from two locations on West Leland Road. As part of the proposed project, Alves Ranch Road would be extended north into the site and would form the fourth leg of an existing signalized intersection with West Leland Road. A full access unsignalized intersection is also proposed on West Leland Road, west of Alves Ranch Road. This unsignalized intersection would be off-set from Tomales Bay Drive, which would remain a right-in/right-out side-street stop-controlled intersection. A separate entrance to the commercial portion of the project off of West Leland Road would also be constructed at a later date. An additional emergency vehicle access location would be provided on the eastern portion of the site south of Neighborhood C, approximately 750 feet east of Alves Ranch Road.

## 2.4 - Discretionary Approvals

The proposed project requires the following discretionary approvals from the City of Pittsburgh:

- Rezoning
- Vesting Tentative Subdivision Map
- Design Review

## SECTION 3: CEQA CHECKLIST

The purpose of the checklist is to evaluate the categories in terms of any changed condition (e.g., changed circumstances, project changes, or new information of substantial importance) that may result in a changed environmental result that could trigger additional environmental review (e.g., a new significant impact or substantial increase in the severity of a previously identified significant effect) (*CEQA Guidelines* Section 15162).

The questions posed in the checklist come from Appendix G of the *CEQA Guidelines*. A “no” answer does not necessarily mean that there are no potential impacts relative to the environmental category, but rather that there is no change in the condition or status of the impact since it was analyzed and addressed with mitigation measures in the FEIR. These environmental categories might be answered with a “no” in the checklist, since the proposed project does not introduce changes that would result in a modification to the conclusion of the previously approved CEQA document.

This 3<sup>rd</sup> addendum addresses the conclusions of the 2004 FEIR.

### 3.1 - Explanation of Checklist Evaluation Categories

#### (1) Conclusion in 2004 FEIR and Related Documents

This column summarizes the conclusion of the 2004 FEIR relative to the environmental issue listed under each topic.

#### (2) Do the Proposed Changes Involve New Impacts?

Pursuant to *CEQA Guidelines* Section 15162, subd. (a)(1), this column indicates whether the changes represented by the proposed project will result in new significant environmental impacts not previously identified or mitigated by the 2004 FEIR or whether the changes will result in a substantial increase in the severity of a previously identified significant impact.

#### (3) New Circumstances Involving New Impacts?

Pursuant to *CEQA Guidelines* Section 15162, subd. (a)(2), this column indicates whether there have been substantial changes with respect to the circumstances under which the proposed project is undertaken that will require major revisions to the 2004 FEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

#### (4) New Information Requiring New Analysis or Verification?

Pursuant to *CEQA Guidelines* Section 15162, subd. (a)(3)(A–D), this column indicates whether new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the 2004 FEIR was adopted, shows any of the following:

- (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
- (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;
- (C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
- (D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

If the additional analysis completed as part of this addendum were to find that the conclusions of the 2004 FEIR remain the same such that no new significant impacts are identified, or identified impacts are not found to be substantially more severe, or additional mitigation is not necessary, then the question would be answered “no” and no additional environmental review would be required.

## **(5) Mitigation Measures Implemented to Address Impacts**

Pursuant to CEQA Guidelines Section 15162, subd. (a)(3), this column indicates whether the 2004 FEIR provided mitigation measures to address effects in the related impact category. Any previously adopted mitigation measures will be identified. The addendum analyses will also address whether any proposed revisions to previously adopted mitigation measures are recommended. These mitigation measures will be implemented with the construction of the 2018 proposed project, as applicable. If “N/A” is indicated, the 2004 FEIR concluded that the impact either would not occur or is not significant, and, therefore, no additional mitigation measures are needed.

## **3.2 - Discussion and Mitigation Sections**

### **(1) Discussion**

A discussion of the elements of the checklist is provided under each environmental category in order to clarify the answers. The discussion provides information about the particular environmental issue (both with respect to the original 2004 FEIR and the 2018 proposed project), how the proposed project relates to the issue, and the status of any mitigation that may be required or that has already been implemented.

### **(2) Mitigation Measures**

Applicable mitigation measures from the 2004 FEIR that apply to the proposed project are listed under each environmental category. It was determined that no new mitigation measures beyond those identified in the 2004 FEIR are necessary for purposes of addressing impacts of the 2018 proposed project.

### (3) Conclusions

A discussion of the conclusion relating to the analysis is contained in each section.

| Environmental Issue Area                                                                                                                                                  | Conclusion in 2004 FEIR                                                                              | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|---------------------------------------------------------------------|---------------------------------------------------------|-------------------------------------------------------------|
| <b>I. Aesthetics</b>                                                                                                                                                      |                                                                                                      |                                                                         |                                                                     |                                                         |                                                             |
| <i>Would the project:</i>                                                                                                                                                 |                                                                                                      |                                                                         |                                                                     |                                                         |                                                             |
| a) Have a substantial adverse effect on a scenic vista?                                                                                                                   | Less than significant with mitigation                                                                | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2                                                 |
| b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?                  | Less than significant with mitigation                                                                | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2                                                 |
| c) Substantially degrade the existing visual character or quality of the site and its surroundings?                                                                       | Significant and unavoidable (only with respect to Impact 5-3 related to power lines) with mitigation | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2 (MM 5-3 does not apply to the proposed project) |
| d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?                                                     | Less than significant with mitigation                                                                | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2                                                 |
| e) Conflict with any applicable land use plan, policy, or regulation adopted by the City of Pittsburg for the purpose of avoiding or mitigating an adverse visual impact? | Less than significant with mitigation                                                                | No                                                                      | No                                                                  | No                                                      | 5-1 and 5-2                                                 |

## Discussion

Aesthetic impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis of visual factors. The 2004 FEIR identified three potential impacts utilizing the above environmental issue areas from Appendix G of the 2004 State CEQA Guidelines as thresholds of significance. Impacts 5-1, 5-2, and 5-3 and the related aesthetics impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR did not identify any significant impacts to scenic views or vistas as a result of the Vista Del Mar development. The 2004 FEIR did conclude that the proposed conversion of the northern portion of the Vista Del Mar development area to high density residential and business commercial development could result in a substantial degradation of the visual character and quality of this area as viewed from community vantage points to the north and east (Impact 5-1). The City concluded that this potential impact associated with development would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measures 5-1 and 5-2.

### Proposed Project Analysis and Conclusion

The proposed project is on a portion of the same site as the Vista Del Mar development previously analyzed in the 2004 FEIR and contemplates the same general uses. The proposed project contemplates less commercial acreage and a minor shift in the location of the commercial component of the proposed project from the western side to the center of the site; however, the overall footprint of the proposed project does not differ from the previously approved project. In addition, the proposed project contemplates buildings of the same height and character as previously approved and would be required to comply with all relevant requirements of 2004 FEIR Mitigation Measures 5-1 and 5-2. Residential building heights would range from 25 feet to 30 feet depending on the architectural style of the proposed residential development. The residential areas of the proposed project would include landscaping, sloping rooflines, and natural materials in keeping with General Plan Goal 4-G-5 emphasis on maintaining the rural character of the area. Commercial buildings would be limited to 35 feet.

The proposed project would be required to adhere to the relevant policies and programs set out in the 2004 FEIR. No new scenic vistas, corridors, resources, or views in the project vicinity have been established. For the reasons set forth above, the proposed project would not result in any significant visual changes beyond those analyzed in the 2004 FEIR, and impacts would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

There are no designated State scenic highways in the City (California Scenic Highway Mapping System, 2016), and there has been no change in the designation of SR 4 through the project site for the proposed project. Therefore, the proposed project would not impact the scenic resources of any state designated scenic highway. However, as noted in the 2004 FEIR, the segment of SR 4 north of the project site is a County-designated Scenic Highway. Accordingly, the 2004 FEIR (as well as the 2008 Addendum) extensively discussed potential impacts on the views from SR 4. In the discussion of Impact 5-1 and 5-2, the 2004 FEIR concluded that development of residential and commercial uses contemplated on the project site, while consistent with the General Plan, could substantially change the character and quality of views from SR 4. 2004 FEIR Mitigation Measure 5-2 incorporates several design requirements to reduce the impact to views from SR 4, including limits on building heights, the imposition of appropriate setbacks, and the inclusion of landscaping. The City also refined 2004 FEIR Mitigation Measure 5-2 when making project approvals in 2009 to require that adequate landscaping be placed along the outer edge (southern side) of the SR 4 sound wall. With these mitigation measures, the City concluded that development north of West Leland Road on the project site would result in less than significant impacts related to the County-designated Scenic Highway.

**Proposed Project Analysis and Conclusion**

The site of the proposed project is located on the same parcels previously analyzed and proposed development would remain within the same footprint; however, the proposed project contemplates slightly less overall development, which would further reduce the visual impact of buildings. As shown in Exhibit 3, the proposed project would provide vegetation along West Leland Road and between SR 4, consistent with applicable General Plan policies and 2004 FEIR Mitigation Measure 5-2. The reduced density would allow for visual separations between buildings sufficient to preserve through views of the hills from SR 4 as contemplated in 2004 FEIR, and would not result in any new or increased significant impacts to SR 4, because the proposed project does not contemplate any new or increased development activity than what was previously assumed.

2004 FEIR Mitigation Measure 5-1 and 5-2 remain applicable to the proposed project, and would be enforced through implementation of the proposed project's MMRP. Additionally, there has been no change in the designation of SR 4 that would require additional analysis. Similar to the 2004 FEIR, impacts of the proposed project would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

In 2004 FEIR Impact 5-3, it was determined that the publicly accessible areas proximate to the proposed homes closest to PG&E's electrical transmission lines would have views that were substantially and adversely diminished. However, this impact is not applicable to the proposed

project. Impact 5-3 is specific to the publicly accessible areas proximate to residences within 200 feet of the PG&E transmission line easement. The proposed project is located approximately 1,200 feet north of the transmission line; therefore, this impact is not applicable to the proposed project, and no further analysis of this impact is required.

In Impact 4-3, the 2004 FEIR indicated that the residential development densities may conflict in visual character and scale with the adjoining Oak Hills Park neighborhood; effects that may be inconsistent with the General Plan, which calls for project compatibility with existing surrounding land uses and use of buffering to separate incompatible uses. As described in 2004 FEIR Impacts 5-1 and 5-2, it was also determined that the proposed conversion of the northern portion of the Vista Del Mar development area to high-density residential and business commercial development could result in a substantial degradation of the visual character and quality of the area. To mitigate potential impacts, the City adopted 2004 FEIR Mitigation Measures 5-1 and 5-2. These mitigation measures require that new developments include an overall layout and grading plan, and associated set of design standards and controls for grading, creekway and landform protection, individual site and architectural design (including individual custom lot architectural design), common and private landscaping, public and private roadways, and implementation of light and glare (including outdoor lighting) plans. The criteria in 2004 FEIR Mitigation Measures 5-1 and 5-2 further limit building heights, identify the need for visual separations, and require landscaping surrounding the development to visually screen commercial and residential development on the project site. The City concluded that, with the exception of the significant and unavoidable impact identified in Impact 5-3, development was consistent with the applicable provisions of the General Plan and implementation of the proposed design guidelines and mitigation measures reduced the impact to visual character and quality to a less than significant level.

### **Proposed Project Analysis and Conclusion**

Development under the proposed project contemplates buildings on the same site and of similar character as previously analyzed. The density of development would be substantially reduced from the previously approved 560 residential units (as revised pursuant to the 2008 Addendum) to 346 units, and the commercial portion of the project would be substantially reduced from 221,500 square feet to 140,000 square feet. The reduction in density and intensity would further reduce aesthetic impacts associated with the buildings themselves and would not result in any increased significant impact or new significant impact as compared to the greater development density and intensity analyzed in the 2004 FEIR. The proposed project would be required to comply with 2004 FEIR Mitigation Measures 5-1 and 5-2, which limit building heights, require visual separations, and require landscaping surrounding the development to visually screen the commercial and residential development. Further, the proposed project includes landscaping in both the residential and commercial areas of the project and establishes setbacks. The proposed project also incorporates open space amenities into the design of the residential neighborhoods (in keeping with GP goals and policies 24'–26, 24'–89, 4-G-4, 4-P-9) which further lessens the visual impact consistent with the development contemplated by the 2004 FEIR. As stated in the 2004 FEIR, all design refinements must be incorporated in the proposed project to the satisfaction of the Planning

Commission, as determined through the City's normal design review process. Similar to the 2004 FEIR, impacts would be less than significant. Therefore, impacts to the visual character or quality of the site associated with implementation of the proposed project have already been accounted for and analyzed within the 2004 FEIR, and no new significant impacts or any substantial increase in the severity of previously identified significant impacts would occur.

**d) Summary of 2004 FEIR**

The 2004 FEIR did not identify any significant light or glare impacts associated with development of residential and commercial uses on the project site. However, the 2004 FEIR required implementation of 2004 FEIR Mitigation Measures 5-1 and 5-2 which would further reduce potential aesthetic impacts related to light and glare to ensure they remain less than significant.

**Proposed Project Analysis and Conclusion**

The proposed project would involve commercial and residential development that is generally consistent with what was previously envisioned and analyzed in the 2004 FEIR and later approved pursuant to the 2008 Addendum. The proposed project contemplates a reduction in residential density and commercial square footage compared to the previously approved project and would not involve any land uses or operations that would cause an increase in the potential for light and/or glare impacts beyond what was previously analyzed. Therefore, the proposed project would not result in any changes to the previously certified EIR associated with light or glare. Nonetheless, the applicable mitigation measures set forth within the previous 2004 FEIR would be required. As identified in the Mitigation Monitoring and Reporting Plan, the proposed project would be required to comply with 2004 FEIR Mitigation Measures 5-1 and 5-2 and all applicable General Plan policies and goals. Similar to the 2004 FEIR, impacts would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR found that development of the project site was generally consistent with the General Plan and other applicable land use policies related to avoiding or mitigating an adverse visual effect. To ensure that development would be consistent, the City adopted 2004 FEIR Mitigation Measures 5-1 and 5-2 incorporating General Plan goals and policies. Incorporation of these mitigation measures and general plan goals and policies would reduce impacts to a less than significant level.

**Proposed Project Analysis and Conclusion**

The proposed project contemplates a similar mix of commercial and residential uses, at reduced density and intensity, on the same site as the previously analyzed and approved project. The proposed project would be required to adhere to 2004 FEIR Mitigation Measures 5-1 and 5-2 and all applicable General Plan goals and policies. Compliance with 2004 FEIR

Mitigation Measure 5-2 includes specific requirements with respect to views from SR 4 to ensure that the proposed project is consistent with the City's General Plan goals and policies. Similar to the 2004 FEIR, impacts would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Aesthetics mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 5-1** To minimize the degree of project-specific adverse impact on the visual character and quality of the project site, the project shall include an overall layout and grading plan, and associated set of design standards and controls for grading, creekway and landform protection, individual site and architectural design (including individual custom lot architectural design), common and private landscaping, public and private roadways, and light and glare (including outdoor lighting), which to the satisfaction of the Pittsburg Planning Commission, as determined through the City's design review process, will sufficiently minimize the degree of adverse impact on the general visual character of the project site. Based upon related land use and urban design goals and policies set forth in the City of Pittsburg General Plan and General Plan EIR, these project design refinements should include some combination of the following:
- Incorporate natural creeks and open space amenities into the design of project residential neighborhoods (in keeping with GP goals and policies 24'-26, 24'-89, 4-G-4, 4-P-9).
  - Maintain the general character of on-site hill forms (in keeping with GP goals 2-G-31 and 2-P-89).
  - Plant trees and other vegetation along West Leland Road and other project collector and arterial roadways in order to maintain the sense of "rural" open space at the City's southern boundary (in keeping with GP policy 4-P-6).
  - Consider use of single-loaded peripheral residential streets at the southern and western edges of the project residential areas south of West Leland Road in order to encourage residential development at these outer edges to face outwards toward the rural landscape and prevent a solid wall of residential backyard fences (in keeping with GP policy 4-P-7).
  - Map all on-site natural features as part of future project development applications, including landforms, rock outcroppings, creekways and ridgelines, and during development and design review, ensure that site layouts are sensitive to these mapped features (in keeping with GP policy 4-P-9).

- Emphasize a sense of rural character in the design and construction of project hillside homes, including extensive landscaping, sloping rooflines, and use of natural materials (in keeping with GP goal 4-0-5).
- Preserve on-site natural creeks and drainage courses as close as possible to their natural locations (in keeping with GP policy 4-P-14).
- Encourage flexible (varying) residential setbacks in hillside residential areas (in keeping with GP policy 4-P-18 and GP Figure 4-5).
- Encourage architectural designs in hillside residential areas that reflect the undulating forms of the hillside setting, such as “breaking” buildings and rooflines into several smaller components (in keeping with GP policy 4-P-23 and GP Figure 4-6). Building forms in such areas should be “stepped” to conform to site topography.
- Encourage residential rooflines that are oriented in the same direction as the natural hillside slope (in keeping with GP policy 4-P-25).
- Use building colors and textures reflective of the surrounding hillside landscape, with roof colors tending toward darker earth tones so that they are less visible from adjacent and upslope on-site and off-site vantage points (in keeping with GP policy 4-P-26). Use irregular planting on graded slopes to achieve a natural appearance (in keeping with GP policy 4-P-27).
- **Use irregular planting on graded slopes to achieve a natural appearance (in keeping with GP policy 4-P-27)**
- To the extent possible, align project residential streets along natural grades (in keeping with GP policy 4-P-28).
- Encourage construction of split roadways in steeper hillsides where appropriate (in keeping with GP policy 4-P-29).
- Provide on-street parking along hillside road in parking bays where topography allows (GP policy 4-P31).

**MM 5-2**

In addition to those listed under Mitigation 5-1, at later phases of the project (when detailed, design level applications are submitted for areas north of West Leland Road), incorporate the following design refinements into the project to the satisfaction of the Planning Commission:

- Ensure that proposed residential development in the project designated High Density Residential area is oriented with the lowest building heights adjacent to SR 4, and set back from the edge of SR 4 sufficiently to mitigate visual impacts (in keeping with GP goal 2-P-87).
- As part of the subsequent development review process, limit building heights and massing in the designated Business Commercial area and/or maintain visual separations within the area, sufficient to preserve through views of the hills from SR 4 and the Bay Point community north of SR 4 (in keeping with GP policy 4-P-3).
- Emphasize beautification of the SR 4 corridor in project landscape plans through a sensitive combination of highway edge landscaping and significant view corridor preservation (in keeping with GP Goal 4-0-12).

- Ensure that all on-site multifamily residential development proposed along SR 4 provides adequate landscaping along related new sound barriers (berms or walls—see Mitigation 14-1 in chapter 14, Noise) (in keeping with GP policy 4-P-64).
- **Ensure that adequate landscaping is placed along the outer edge (northern side) of the SR 4 sound wall (2008 Addendum).**

## Conclusion

The aesthetic resource conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                       | Conclusion in 2004 FEIR | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| <b>II. Agricultural Resources</b>                                                                                                                                                                                                              |                         |                                                                         |                                                                     |                                                         |                               |
| <i>Would the project:</i>                                                                                                                                                                                                                      |                         |                                                                         |                                                                     |                                                         |                               |
| a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | No impact               | No                                                                      | No.                                                                 | No                                                      | N/A                           |
| b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?                                                                                                                                                           | No impact               | No                                                                      | No.                                                                 | No                                                      | N/A                           |
| c) Involve other changes to the existing environment which, due to their location or nature, could result in conversion of farmland to other non-agricultural use?                                                                             | No impact               | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Agricultural resources impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potential significant impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development would convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural uses. As described in the 2004 FEIR, the project site is classified as grazing land by the California

Department of Conservation, and does not include any lands designated as Prime, Unique, or of Statewide Importance. Accordingly, the project would have no impact in this regard.

### **Proposed Project Analysis and Conclusion**

The project site is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as noted in the 2004 Draft EIR. Similar to the 2004 FEIR, the proposed project—which involves the same overall development footprint but with reduced density and intensity of uses—would not convert designated Important Farmland as described previously to a non-agricultural use. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **b) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would conflict with an existing zoning for agricultural use or Williamson Act contract. As discussed in the 2004 FEIR, the project site does not contain any land zoned for agricultural use or land under Williamson Act contract. Accordingly, the project would have no impact in this regard.

### **Proposed Project Analysis and Conclusion**

Similar to the analysis in the 2004 FEIR, the project site does not contain any land zoned for agricultural use or land under Williamson Act contract. Accordingly, the project would have no impact in this regard. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **c) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would result in other changes that could lead to the conversion of Important Farmland to other non-agricultural use.

In Impact 4-2, the 2004 FEIR indicated that the residential boundary of the southern portion of the development site was adjacent to the Seecon property, which was under Williamson Act contract and actively grazed. The 2004 FEIR included a Mitigation Measure 4-2, which required notification to all prospective residents regarding the potential nuisances associated with abutting or nearby animal grazing. The implementation of Mitigation Measure 4-2 was found to reduce potential impacts to less than significant.

### **Proposed Project Analysis and Conclusion**

The 2018 proposed project is located north of West Leland Road, and would not result in the potential conflicts identified in the 2004 FEIR for the residential lots in the southern portion of the site. Accordingly, Mitigation Measure 4-2 would not apply to the 2018 proposed project, and no impact would occur in this regard. Therefore, the proposed project would not

introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### Mitigation Measures

No mitigation is required.

### Conclusion

The agricultural resources conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                   | Conclusion in 2004 FEIR                     | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| <b>III. Air Quality</b>                                                                                                                                                                                                                                                                    |                                             |                                                                         |                                                                     |                                                         |                               |
| <i>Would the project:</i>                                                                                                                                                                                                                                                                  |                                             |                                                                         |                                                                     |                                                         |                               |
| a) Conflict with or obstruct implementation of the applicable air quality plan?                                                                                                                                                                                                            | Less than significant                       | No                                                                      | No                                                                  | No                                                      | N/A                           |
| b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?                                                                                                                                                                         | Significant and unavoidable with mitigation | No                                                                      | No                                                                  | No                                                      | 15-2                          |
| c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)? | Significant and unavoidable with mitigation | No                                                                      | No                                                                  | No                                                      | 15-2                          |
| d) Expose sensitive receptors to substantial pollutant concentrations?                                                                                                                                                                                                                     | Less than significant with mitigation       | No                                                                      | No                                                                  | No                                                      | 15-1                          |
| e) Create objectionable odors affecting a substantial number of people?                                                                                                                                                                                                                    | N/A                                         | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Air quality impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified three potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of

significance. 2004 FEIR Impacts 15-1 and 15-2 and the related air quality impact discussions collectively address the above environmental issue areas as described below.

**a) Summary of 2004 FEIR**

When the 2004 FEIR was approved, the Bay Area was a designated nonattainment area for State and national ozone ambient air quality standards and as a nonattainment area for the state particulate matter (PM) standards for PM measuring 10 micrometers in diameter or less (PM<sub>10</sub>). The Bay Area Air Quality Management District (BAAQMD) prepares plans to attain ambient air quality standards in the San Francisco Bay Area Air Basin (SFBAAB), including ozone attainment plans for the national ozone standard and clean air plans for the California standard. The applicable plan at the time of the 2004 FEIR was the 1997 Clean Air Plan. No State PM<sub>10</sub> was prepared or required.

Projects that are consistent with the assumptions used in development of the 1997 Clean Air Plan are considered to not be in conflict with or otherwise obstruct the attainment of air quality levels identified in the relevant plan. Assumptions for emission estimates are based on population, employment, and land use projections taken from local and regional planning documents. As discussed in the 2004 FEIR, the contemplated development of up to 563 housing units and 257,500 square feet of commercial building space was generally consistent with the 2001 General Plan land use designations and maximum development capacities. As a result, the City concluded that impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

Since the 2004 FEIR, BAAQMD has adopted the *2017 Clean Air Plan: Spare the Air, Cool the Climate*. The *2017 Clean Air Plan* incorporates the level of development assumed in the 2001 General Plan, which is consistent with the level contemplated by the proposed project. In fact, since the proposed project contemplates the development of 346 housing units compared to 563 housing units under the 2004 FEIR, the proposed project would result in a decrease in development intensity compared to the 2004 FEIR. Also, the proposed project would result in a decrease in the total commercial floor area from 257,000 square feet to approximately 140,000 square feet. Similar to the 2004 FEIR, the proposed project would result in a less than significant impact. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR determined that long-term operational emissions from the Vista Del Mar development could violate an ambient air quality standard or contribute substantially to an existing violation (Impact 15-2). Using the current model at the time of the analysis (URBEMIS 2002), the 2004 FEIR found that the Vista Del Mar development would generate 119 pounds per day of reactive organic gases (ROG), 121 pounds per day of nitrogen oxides (NO<sub>x</sub>), and 113 pounds per day of PM<sub>10</sub>. Those emissions exceeded the recommended threshold of 80 pounds

per day. This would result in potentially significant impacts. The 2004 FEIR Mitigation Measure 15-2 requires the proposed on-site commercial components to implement strategies to reduce traditional vehicle usage. However, even with implementation of 2004 FEIR Mitigation Measure 15-2, the City concluded that impacts would still be significant and unavoidable.

### **Proposed Project Analysis and Conclusion**

The BAAQMD *CEQA Air Quality Guidelines* include thresholds of significance that are applied to evaluate regional impacts of project-specific emissions of air pollutants and their impact on BAAQMD's ability to reach attainment (BAAQMD, 2017). These thresholds have been revised from 80 pounds per day for ROG, NO<sub>x</sub>, and PM<sub>10</sub> in the 1999 BAAQMD *CEQA Guidelines* to 54 pounds per day for ROG and NO<sub>x</sub> and 82 pounds per day for PM<sub>10</sub> in the 2017 BAAQMD *CEQA Guidelines*. The proposed project would result in a decrease in both the number of residential units and the square footage of commercial development compared to the 2004 FEIR. However, in terms of long-term operational impacts, the proposed project would generate a total of 7,810 trips per day, which is a slight increase from the estimate of 7,550 trips per day in the 2004 FEIR. This results in a net increase of 260 trips, or a nominal 3.4 percent increase from the estimate in the 2004 FEIR.

Although the overall daily trip generation would increase slightly from the previous estimates based on the changes in the commercial land use characteristics, the proposed project is anticipated to begin construction and operation in 2018, a much later date than assumed in the 2004 FEIR. In later years, advancements in engine technology, tailpipe emission standards, and turnover in the vehicle fleet result in lower emission rates. Therefore, even with the slight increase in vehicle trips associated with the proposed project, the decrease in the fleet average exhaust emission rates would offset the emissions from those nominal numbers of additional trips.

Consistent with the 2004 FEIR, emissions from the proposed project would be anticipated to exceed the recommended thresholds of significance. Implementation of 2004 FEIR Mitigation Measure 15-2 would be required. Considering the changes to the trip generation rates, emission factors, and recommended thresholds of significance, proposed project impacts would continue to remain significant and unavoidable. However, due to more stringent emissions standards and other technology as discussed above, the proposed project and minor increase in daily trips would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **c) Summary of 2004 FEIR**

According to the 2004 FEIR, BAAQMD guidance provides that projects that would individually have a significant regional air quality impact would also be considered to have a significant cumulative regional air quality impact. The development evaluated in the 2004 FEIR exceeded the thresholds of significance, and therefore, the City concluded that there would be a significant and unavoidable impact.

### **Proposed Project Analysis and Conclusion**

As discussed in III(c) above, the development evaluated in the 2004 FEIR would exceed thresholds of significance with respect to long-term operational impacts and result in significant and unavoidable impacts. Similarly, the proposed project would exceed thresholds of significance and result in significant and unavoidable impacts. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **d) Summary of 2004 FEIR**

The BAAQMD CEQA Guidelines consider particulate matter to be the pollutant of greatest concern with respect to construction activities. BAAQMD does not have quantitative emission thresholds for fugitive dust. Fugitive dust emissions from construction activities can be greatly reduced by implementing specified control measures. BAAQMD recommends that all projects, regardless of the level of average daily emissions, implement applicable best management practices (BMPs), including those listed in the BAAQMD CEQA Guidelines.

The 2004 FEIR discussed construction activities, such as excavation and grading operations, that would generate exhaust emissions and fugitive particulate matter emissions that could result in elevated levels of particulate matter, creating a possible nuisance at residential, school, and other nearby properties. This represents a potentially significant Impact. The City concluded that implementation of the control measures included in 2004 FEIR Mitigation Measure 15-1 would be expected to reduce this impact to less-than-significant level.

### **Proposed Project Analysis and Conclusion**

#### *Construction*

Diesel exhaust poses both a potential health and nuisance impact to nearby receptors. The California Air Resources Board (CARB) has identified particulate matter from diesel-fueled engines as a toxic air contaminant (TAC). High-volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic were identified as having the highest associated health risks from TACs. The dose, including the concentration of TACs and the exposure time, to which receptors are exposed is the primary factor used to determine health risk. Construction activities would occur intermittently for a short duration (approximately 30 months) at various locations on the project site, and at varying distances from sensitive receptors. Because of the relatively short duration of construction activities, and the majority of emission sources being located at varying distances from nearby receptors (ranging from 50 feet to 1,000 feet from the nearest receptors as equipment operates across the project site ), health risks due to diesel PM emissions would be less than significant and therefore, consistent with the 2004 FEIR.

Construction impacts of the proposed project would be similar to the analysis presented in the 2004 FEIR. Although there would be some decrease in the overall construction schedule and

amount of equipment required based on the reduced scale of proposed development, 2004 FEIR Mitigation Measure 15-1 would still be required to reduce fugitive dust emissions and ensure impacts remain less than significant.

#### *Operation*

Operation of the proposed project would involve residential and commercial land uses that would not be a substantial source of TAC emissions. As a result, implementation of 2004 FEIR Mitigation Measure 15-1 would ensure the proposed project's potential impacts are less than significant, similar to what was evaluated in the 2004 FEIR.

The proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **e) Summary of 2004 FEIR**

The 2004 FEIR did not address impacts associated with whether the Vista Del Mar development would create objectionable odors.

#### **Proposed Project Analysis and Conclusion**

The land uses associated with the proposed project would be residential and commercial, which are not typically a generator of odor emissions, either during construction or as part of long-term operations. Therefore, the proposed project would not create objectionable odors affecting a substantial number of people. The proposed impact would be less than significant. The proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR.

### **Mitigation Measures**

Air Quality mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 15-1      Implement the following dust control measures during project construction activities:**
- (a) Water all active construction areas at least twice daily and more often during windy periods Active areas adjacent to existing land uses must be kept damp at all times or must be treated with non-toxic stabilizers or dust palliatives;**
  - (b) Cover all trucks hauling soil sand and other loose materials or require all trucks to maintain at least two feet of freeboard;**
  - (c) Pave or apply water three times daily or apply non-toxic soil stabilizers on all unpaved access roads parking areas and staging areas at construction sites;**
  - (d) Sweep daily (preferably with water sweepers) all paved access roads, parking areas and staging areas at construction sites;**

- (e) Sweep streets daily (preferably with water sweepers) if visible soil material is carried onto adjacent public streets;
- (f) Hydroseed or apply non-toxic soil stabilizers to inactive construction areas;
- (g) Enclose, cover or water twice daily or apply non-toxic soil binders to exposed stockpiles (dirt, sand, etc.);
- (h) Limit traffic speeds on unpaved roads to 15 miles per hour;
- (i) Install sandbags or other erosion control measures to prevent silt runoff from grading onto adjacent roadways paths and other paved areas and in particular into nearby drainage channels;
- (j) Replant vegetation in disturbed areas as quickly as possible;
- (k) Install windbreaks or plant trees as vegetative wind breaks at windward side(s) of construction areas;
- (l) Limit excavation and grading activity when winds' instantaneous gusts result in unmanageable dust; and
- (m) Limit the area subject to excavation grading and other construction activity at any one time.

**MM 15-2** Require on-site business commercial (office and retail) components of the project to implement strategies identified in the 2004 FEIR to reduce conventional vehicle usage by encouraging pedestrian bicycle and transit modes of travel. **Require project residential components to provide for strategies identified in the 2004 FEIR to reduce air emissions and encourage telecommuting.**

## Conclusion

The air quality conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                                         | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

## Discussion

Biological resources impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis of biological resources. Exceptions include 2004 FEIR Mitigation Measure 11-2 that pertains to permits that have already been acquired and implemented, and Mitigation Measure 11-5 that pertains to areas south of West Leland Road. The remaining mitigation measures from the 2004 FEIR that identified potential impacts utilizing the above environmental issue areas from Appendix G of the 2004 State CEQA Guidelines as thresholds of significance are discussed below.

- a) **Summary of 2004 FEIR.** The 2004 FEIR identified several species of concern on the Vista Del Mar development area. As a result, potentially significant impacts could occur. Therefore, the 2004 FEIR identified Mitigation Measures 11-3 through 11-10, which require that biological

surveys be conducted on-site prior to construction, and any mitigation imposed by the resource agencies be implemented, thereby ensuring that significant impacts to special status species are avoided or reduced to a less than significant level. The City concluded that impacts would be reduced to less than significant with incorporation of the above-identified mitigation.

### **Proposed Project Analysis and Conclusion**

The project site has already been graded as part of the Vista Del Mar development, which was constructed on the south side of West Leland Road between 2009 and 2015. However, for purposes of a conservative analysis and in accordance with the applicable mitigation measures, biological site surveys on the project site were conducted in June 2018 and found that no species of concern were present on-site. In addition, as noted in the June 2018 biological memorandum prepared in connection with this CEQA Addendum (Appendix A), no new significant biological resource issues were found on the site.

The proposed project would not trigger any significant impacts to biological resources beyond those analyzed in the 2004 FEIR, since the 2018 proposed project involves the same general uses within the same footprint. Therefore, similar to the findings in the 2004 EIR, impacts would be potentially significant with regard to potential impacts to certain identified species of concern. Implementation of 2004 FEIR Mitigation Measure 11-3, 11-4, and 11-6 through 11-10 would reduce impacts to less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

- b) Summary of 2004 FEIR.** The 2004 FEIR originally found that the development of the Vista Del Mar development area may be inconsistent the City's General Plan policies as they pertain to drainages and riparian areas or other sensitive habitats. The area to the south of West Leland Road includes seasonal creeks and drainages, with scattered trees and scrub cover that could provide habitat for nesting bird species.

The City concluded that the potential impact was less than significant with incorporation of 2004 FEIR Mitigation Measure 11-2, which required completion of a wetland delineation and implementation of any mitigation imposed. Since that time, 2004 FEIR Mitigation Measure 11-2 was fulfilled, as the wetland delineation was prepared and certified by the US Army Corps of Engineers (USACE), and a Wetlands Mitigation and Monitoring Plan was submitted, approved, and implemented, including the creation of mitigation ponds as required by the permit conditions.

### **Proposed Project Analysis and Conclusion**

The proposed project, which involves the same types of uses within the same general footprint as previously evaluated, but at a lower overall density and intensity, would not result in any new significant impacts to riparian or other sensitive habitats. The creeks and seasonal wetlands identified in the 2004 FEIR are located to the South of West Leland Road and would not therefore be affected by the 2018 proposed project. Therefore, the proposed project

would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 EIR originally found that construction of the Vista Del Mar development may be inconsistent the City's General Plan policies as they pertain to drainages and wetlands. However, the City concluded that the impact was less than significant with incorporation of 2004 EIR Mitigation Measure 11-2, which required completion of a wetland delineation and implementation of any mitigation imposed. Since that time, 2004 EIR Mitigation Measure 11-2 was fulfilled, as the wetland delineation was prepared and certified by the USACE, and a Wetlands Mitigation and Monitoring Plan was prepared, approved, and implemented, including the creation of mitigation ponds as required by the permit conditions.

**Proposed Project Analysis and Conclusion**

The proposed project, which involves the same types of uses within the same general footprint as previously evaluated, but at a lower overall density and intensity, would not result in any new significant impacts to riparian or other sensitive habitats. The creeks and seasonal wetlands identified in the 2004 FEIR are located to the South of West Leland Road and would not therefore be affected by the 2018 proposed project. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 EIR did not expressly analyze wildlife movement on the site. However, a less than significant impact would have been anticipated due to proximity to surrounding urban development and lack of high quality habitat on-site. The 2004 FEIR at page 11-10 states that due to the limited amount of tree and shrub cover. . . the creeks and drainages do not allow for concealed wildlife movement.

**Proposed Project Analysis and Conclusion**

Given the project site's already-graded status, its proximity to surrounding urban development, and the lack of high-quality habitat on-site, there are no significant wildlife movement corridors that would be significantly impacted by the proposed project. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR analyzed application of local policies or ordinances protecting biological resources, and identified impacts related to natural drainage courses as potentially significant based on potential conflicts with the proposal to construct the Vista Del Mar development.

However, the 2004 FEIR concluded that implementation of 2004 FEIR Mitigation Measures 11-1, which required consistency with local biological resources protection, including the actions required by the other 2004 FEIR biological mitigation measures (i.e., species surveys, protections where warranted, reseeding of cut and fill slopes, setbacks from natural drainage courses, etc.), would reduce this impact to less than significant.

#### **Proposed Project Analysis and Conclusion**

The proposed project, which involves the same types of uses within the same general footprint as previously evaluated, but at a lower overall density and intensity, would not result in any new significant impacts to natural drainage courses on the project site, or otherwise result in any conflicts with other applicable local policies or ordinance protecting biological resources. As noted in the biological resource memorandum, the 2018 project site does not contain sensitive species or habitats, and would not therefore introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **f) Summary of 2004 FEIR**

The initial study prepared as part of the 2004 FEIR noted that the project site is not subject to any adopted Habitat Conservation Plan, and concluded that there would be no impact in this regard.

#### **Proposed Project Analysis and Conclusion**

The proposed project, which involves the same types of uses within the same general footprint as previously evaluated, but at a lower overall density and intensity, would not result in any new significant impacts in this regard. Since the 2004 FEIR was certified, the City of Pittsburg has become a party to the East Contra Costa County Habitat Conservation Plan (ECCC HCP), which identifies the site as a combination of ruderal and grasslands. However, the City's ordinance implementing the ECCC HCP exempts projects with vested rights as established by California law including Government Code Sections 65864 through 65869 ("development agreements"). Accordingly, it has been determined that no additional impact would occur and therefore no additional mitigation measures are required. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

### **Mitigation Measures**

Biological resources mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 11-1**      The ultimate determination whether the proposed project, after implementation of the mitigations identified in this EIR, is or is not inconsistent with one or more General Plan goals or policies, would be the responsibility of City officials assigned

such authority. In particular, interpretation of project consistency with City of Pittsburg General Plan policy is the ultimate responsibility of the City of Pittsburg Planning Commission and City Council.

In order to comply with City of Pittsburg General Plan policies 9-P-1 and 9-P-8, the project shall incorporate the following changes and mitigations into the project:

- (1) Implement Mitigations 11-3 through 11-12 which are discussed on the following pages (see Policy 9-P-1); and
- (2) **Reseed cut and fill slopes or other graded/disturbed areas on the project site with a native herbaceous seed mix. No nonnative or invasive species shall be included in the mix (see Policy 9-P-8).**
- (3) The current preliminary version of the applicant's Mitigation and Monitoring Plan formulated for review by the resources agencies proposes preservation of approximately 3,300 linear feet of onsite drainages and onsite enhancement of approximately 1,000 linear feet of drainages.

The City of Pittsburg shall make the above items conditions of project approval and shall not approve grading plans until the above mitigations have been incorporated into the project to City satisfaction. During the local development review process, the City shall determine whether the applicant-proposed onsite drainage preservation program achieves project consistency with General Plan goals and policies related to creeks, or whether additional design measures are warranted.

**MM 11-3      The City of Pittsburg shall not issue a grading permit for the project until adequate demonstration to the City that California red-legged frog issues have been resolved to the satisfaction of the USFWS. To satisfy the USFWS, the applicant will need to: (1) instruct the U.S. Army Corps of Engineers (Corps) to initiate formal consultation, pursuant to section 7 of the Federal Endangered Species Act, with the USFWS regarding the California red-legged frog; and (2) implement mitigation as necessary (see details below). A copy of a "non-jeopardy" Biological Opinion issued by the USFWS shall be submitted to the City prior to issuance of a grading permit.**

**MM 11-4      The City of Pittsburg shall not issue a grading permit for the project until adequate demonstration to the City that mitigation for impacts to California tiger salamander habitat will be implemented to the satisfaction of the CDFG (and the USFWS since the species has recently been federally listed). To satisfy the CDFG and USFWS, the applicant will need to: (1) consult with the CDFG and the USFWS; and (2) redesign the project as much as possible to avoid aestivation and potential breeding habitat; or (3) where avoidance is not feasible, replace affected habitat in accordance with CDFG and USFWS requirements, and in accordance with specifications discussed in Mitigation 11 1; and (4) salvage adults and/or larvae.**

- MM 11-6**      The applicant shall coordinate with the USFWS regarding any additional review of potential San Joaquin kit fox impacts resulting from the proposed project. Additionally, within 30 days prior to any earth-moving disturbance, a qualified kit fox biologist(s) [i.e., the biologist(s) must meet the qualifications stated in USFWS' survey protocol (USFWS 1997b)] shall conduct preconstruction den surveys on the project site. These surveys shall follow the methodology outlined in Appendix 1, Section 2, of USFWS' 1997 survey protocol. Any potential dens identified during the preconstruction surveys shall be monitored with cameras for a minimum of three nights in accordance with the survey protocol. If kit fox or kit fox sign is identified at any time during these surveys, all work shall cease and USFWS and CDFG personnel shall be contacted immediately. Implementation of this mitigation would reduce any project impacts on San Joaquin kit fox to a less-than-significant level.
- MM 11-7**      Completion of the CDFG-protocol surveys for burrowing owl shall be a condition of project approval. The applicant shall retain a qualified biologist to conduct CDFG-protocol surveys for burrowing owl the year grading is proposed. If burrowing owls are found on the project site, the applicant shall be required to prepare a Habitat Mitigation Plan and a Mitigation Agreement for any burrowing owls identified. The City shall receive copies of the approved Mitigation Plan and Mitigation Agreement between the applicant and the CDFG prior to issuing a grading permit for the proposed project. All surveys and mitigation shall be coordinate by the applicant with CDFG. If such surveys demonstrate that burrowing owls do not occur on the project site, no further requirement for burrowing owls shall be required by the City. Implementation of these measures would reduce this potential impact to a less-than-significant level.
- MM 11-8**      Completion of nesting surveys for these raptors and establishment of CDFG-approved mitigation for any survey-identified active nests shall be a condition of project approval. The applicant shall retain a qualified raptor biologist to conduct spring nesting surveys the year grading is proposed. If nest(s) are found, the CDFG can be expected to require the following or similar protection measures:
- (1) Establishment of a fenced buffer of 1,000 feet around any survey-identified active raptor nest, or as otherwise determined by a qualified, CDFG-approved raptor biologist (see text below).
  - (2) Having a biological monitor present during all grading activity near the buffer zone; and
  - (3) Avoiding grading within the buffer zone until the raptor biologist states that the young have fledged and are flying well enough to avoid being impacted by project construction.
- If such surveys demonstrate that raptor nests do not occur on the project site, no further requirements for these raptors shall be required by the City.

Implementation of this measures would reduce this potential impact to a less-than-significant level.

**MM 11-9** Completion of loggerhead shrike nesting surveys and establishment of CDFG-approved mitigation for any survey-identified active nests shall be a condition of project approval. The applicant shall retain a qualified biologist to conduct spring nesting surveys for loggerhead shrike, coordinated with the CDFG, the year grading is proposed. If nest(s) are found, the applicant shall complete the following measures:

- (1) Establish a 250-foot fenced buffer zone around each active nest location; and
- (2) Have a biological monitor present during all grading activity near the buffer zone.

If appropriately timed nesting surveys demonstrate that loggerhead shrikes do not nest on the project site, no further requirements for the bird shall be required by the City. Implementation of this mitigation would reduce this potential impact to a less-than-significant level.

**MM 11-10** Completion of California horned lark nesting surveys and establishment of CDFG-approved mitigation for any identified active nests shall be a condition of project approval. The applicant shall retain a qualified biologist to conduct spring nesting surveys for California horned lark, coordinated with the CDFG, the year grading is proposed. If nest(s) are found, the CDFG can be expected to require the applicant to complete the following or similar measures:

- (1) Establish a 250-foot-wide fenced buffer zone around each survey-identified active nest location; and
- (2) Have a biological monitor present during all grading activity near the buffer zone.

If such surveys demonstrate that California horned larks do not nest on the project site, no further requirements for this bird shall be required by the City. Implementation of this mitigation would reduce this potential impact to a less-than-significant level.

## Conclusion

The biological resources conclusions in the 2004 EIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

## Discussion

Cultural resource impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified two potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 12-1 and 12-2 and related cultural resources impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The California Historic Resource Information System (CHRIS) records search did not identify historic resources on or within 0.5 miles of the Vista Del Mar development area. The 2004 FEIR found that several on-site structures associated with previous ranch activity (located south of West Leland Road) are more than 45 years old and could qualify as historic structures. As a result, potentially significant impacts could occur. However, the 2004 EIR required

implementation of 2004 FEIR Mitigation Measure 12-2, which would ensure a historical resources survey would be conducted for all on-site structures meeting the requirements of section 5024.1(g) of the State Public Resources Code and, to the extent any historic resources are on-site, the survey would identify appropriate measures to mitigate any significant impacts. The City concluded that impacts would be reduced to less than significant with incorporation of mitigation.

### **Proposed Project Analysis and Conclusion**

The project site was graded as part of the Vista Del Mar development. An updated CHRIS records search was conducted on June 25, 2018 and found that no additional historic resources have been recorded at the project site since 2004. A pedestrian survey of the site conducted on June 25, 2018, confirmed that no structures remain at the site (see Appendix B). The proposed project does not anticipate any significant changes to historic resources beyond those analyzed in the 2004 FEIR.

Nevertheless, similar to the findings in the 2004 FEIR, impacts would be potentially significant with regard to unknown historic resources that could potentially be exposed as a result of construction. Implementation of 2004 FEIR Mitigation Measure 12-2 would reduce impacts to less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

### **b) Summary of 2004 FEIR**

The 2004 FEIR noted that excavation and construction on the Vista Del Mar development area (which included the Alves Ranch project site) could uncover previously unknown prehistoric and archeological resources. As explained further in the 2004 FEIR, the CHRIS Northwest Information Center was contacted and it was determined that the Vista Del Mar development area was in an area with a moderate potential for undiscovered Native American sites. Therefore, the 2004 FEIR concluded that project-related grading and construction activities could uncover previously undiscovered prehistoric and archeological resources resulting in potentially significant impacts. However, the 2004 FEIR also concluded that with implementation of 2004 FEIR Mitigation Measure 12-1, this would reduce these impacts to a less than significant level.

### **Proposed Project Analysis and Conclusion**

The proposed project involves development within the same general footprint that was analyzed in the 2004 FEIR. However, the project site was previously graded as part of the Vista Del Mar development. An updated CHRIS records search was conducted on June 25, 2018, and found that no additional archeological resources have been recorded at the site since 2004. In addition, the Native American Heritage Commission (NAHC) was asked to perform a search of its Sacred Lands File (SLF), which returned negative results for recorded Tribal Cultural Resources at the site.

FirstCarbon Solutions (FCS) sent letters to the six tribal representatives identified by the NAHC on June 29, 2018 to further determine the potential for Native American sites on the project site, and no replies have been received to date.

An updated pedestrian survey conducted at the site on June 25, 2018, failed to identify any unrecorded archaeological resources within the project boundaries; however, visibility was poor due to grasses and ground cover that obscured the majority of the site (Appendix B). The proposed project does not anticipate any significant cultural resources changes beyond those analyzed in the 2004 FEIR. Furthermore, the proposed project would be required to implement 2004 FEIR Mitigation Measure 12-1, which would ensure that if any significant finds are uncovered, appropriate measures would be implemented to ensure that impacts are mitigated to a less than significant level, similar to the conclusions set forth in the 2004 FEIR. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 EIR considered whether construction in the Vista Del Mar development area could potentially impact previously unknown paleontological resources. According to the 2001 General Plan EIR, potential paleontological resources could be unearthed during excavation and construction activities on the Vista Del Mar development area (including the Alves Ranch project site). However, the 2004 EIR concluded that with implementation of 2004 EIR Mitigation Measure 12-1, this would reduce potentially significant impacts to a less than significant level.

**Proposed Project Analysis and Conclusion**

The proposed project would be developed in the same general footprint as previously evaluated in the 2004 FEIR, and thus there is the possibility of uncovering previously unknown paleontological resources. Therefore, on June 11, 2018 a Paleontological Records Search was conducted by Dr. Ken Finger for FCS (see Appendix B) to determine the potential for paleontological resources to occur on the project site. No known paleontological resources are located within a half-mile radius of the project site based on the University of California Museum of Paleontology (UCMP) database. However, the project site is located on Pliocene nonmarine deposits and these soils have the potential to yield paleontological resources during construction and grading activities. Any activity that destroys paleontological resources would result in significant impacts. However, similar to the conclusions set forth in the 2004 FEIR, the proposed project would be required to implement 2004 FEIR Mitigation Measure 12-1, which would reduce impacts to less than significant. Therefore, the proposed project would not create or result in cultural resources impacts greater than evaluated in the 2004 FEIR. No further analysis is required.

**d) Summary of the 2004 FEIR**

The 2004 FEIR determined that construction in the Vista Del Mar development area could potentially disturb human remains, including remains interred outside of formal cemeteries. For these reasons, the 2004 FEIR determined that if inadvertent discovery of human remains occurred during construction activities, this would be a significant impact. Therefore, the 2004 EIR identified Mitigation Measure 12-1 as necessary to be imposed on the Vista Del Mar development to ensure impacts would be reduced to a less than significant level.

**Proposed Project Analysis and Conclusion**

Mass grading has previously occurred on the project site as part of the Vista Del Mar development and as part of this grading, 2004 FEIR Mitigation Measure 12-1 was implemented to ensure that impacts remained less than significant. However, because the proposed project would be located within the same general footprint as the development analyzed in the 2004 EIR, construction of the proposed project could uncover human remains during excavation, which would result in potentially significant impacts. Therefore, consistent with the conclusions in the 2004 FEIR, the proposed project would be required to implement 2004 FEIR Mitigation Measure 12-1, which would reduce impacts to less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**Mitigation Measures**

Cultural resources mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 12-1      Require that a qualified archaeologist be retained at applicant expense to monitor project-related on-site excavation. In the event that subsurface cultural resources are uncovered during approved ground-disturbing activities, work in the immediate vicinity shall be halted immediately and the retained archaeologist shall evaluate the finds and make a determination in regard to the cultural value of the discovery and warranted mitigation measures. Such preliminary field inspection may demonstrate the need for some form of additional subsurface testing; e.g. excavation by auger shovel or backhoe unit. The discovery or disturbance of any significant cultural resources should be reported to the California Historical Resources Information System (CHRIS). The discovery of any Native American cultural resources shall also be reported to the Native American Heritage Commission. If a significant archaeological resource is identified through this field inspection process the City and project proponent shall seek to avoid damaging effects to the resource. Preservation is the preferred manner of mitigating impacts to an archaeological site. When in-place mitigation is determined by the City to be infeasible, a mitigation program, including measures**

set forth in sections 15064.4 and 15126.4 of the CEQA Guidelines shall be implemented. Specifically a data recovery plan which makes provisions for adequate recovery of the scientifically consequential information about the site shall be prepared prior to any additional excavation being undertaken. The plan shall be submitted to the California Historical Resources Regional Information Center (i.e. the NWIC at Sonoma State University). If Native American artifacts are indicated the plan shall also be submitted to the Native American Heritage Commission (NAHC). Identified cultural resources should be recorded on State Department of Parks and Recreation form DPR 422 archaeological sites. The data recovery plan should be finalized as necessary to incorporate any mitigation additions or revisions recommended by these two groups and or required by the City. If human remains are found special rules set forth in State Health and Safety Code section 70505 and CEQA Guidelines section 15126.4(b) shall apply. The identified mitigations shall be undertaken to City satisfaction if necessary prior to resumption of grading activities. A data recovery plan and data recovery shall not be required if the City determines that testing or studies already completed have adequately recovered the necessary data provided that the data are available for review at the California Historical Resource Regional Information Center CEQA Guidelines section 15126.4(b) Implementation of these measures will reduce this potential impact to a less-than-significant level.

**MM 12-2**

The Applicant shall hire a qualified archaeologist or architectural historian to conduct a historical resources survey HRS for all on site ranch structures which appear to be over 45 years old, meeting the requirements of section 50241(g) of the State Public Resources Code. Further mitigation shall not be required if the City accepts an HRS finding that none of the existing on-site ranch structures is a significant historic resource as defined in CEQA Guidelines section 15064.5(a). For any project action that may cause a substantial adverse change in one or more HRS-identified potentially significant historic resources the applicant shall incorporate measures that would seek to improve the affected historic resource in accordance with either of the following publications:

- Secretary of Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving Rehabilitating Restoring and Reconstructing Historic Buildings, or
- Secretary of Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings.

## Conclusion

The cultural resources conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                               | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures           |

| e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water. | No impact                             | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Geology and soils impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified 12 potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 10-1 through 10-12 and related geology and soils impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR (Surface Rupture, Seismic Shaking, and ground failure, including liquefaction)

**Surface rupture:** The 2004 FEIR determined that there are no active or potentially active faults or traces on the project site. Accordingly, there would be no impact related to surface rupture.

**Groundshaking:** The project site is located in the San Francisco Bay Area and thus at risk of moderate to high ground shaking. The 2004 FEIR determined that adherence to California Building Code requirements would ensure that potential impacts related to seismic groundshaking would be reduced to a less than significant level

**Ground failure due to liquefaction and/or landslides:** The 2004 FEIR determined that although a geotechnical study had been prepared by Berlogar Geotechnical Consultants (BGC), there was no assurance that the recommendations and construction guidelines would be implemented into the Vista Del Mar development. In addition, the BGC study identified areas susceptible to landslides, which could destroy impoundment ponds and significant impacts could potentially occur. Further, the BGC study did not fully describe remediation required to prevent landslides from occurring, which could result in potentially significant impacts. As a result, 2004 FEIR Mitigation Measures 10-1, 10-2, and 10-11 were proposed to ensure that a geotechnical study would evaluate future project impacts and identify specific measures that would be incorporated into project grading and site preparation plans to reduce these significant impacts to a less than significant level. Implementation of these measures was determined by the City to reduce impacts to less than significant.

### **Proposed Project Analysis and Conclusion**

The proposed project involves the same types of uses, to be developed in the same general footprint as was previously evaluated; however, there will be fewer residential units and less commercial square footage as compared to the development evaluated in the 2004 FEIR. Therefore, fewer people and structures overall would be exposed to the geological risks previously identified.

Furthermore, as required by the applicable mitigation measures, Stevens, Ferrone & Bailey Engineering Company, Inc. (SFB) prepared a Geotechnical Memo (Appendix C) for the proposed project on June 1, 2018. As already noted in the 2004 FEIR, the proposed project is not located in an Alquist-Priolo Fault Zone as designated by the State of California.

Although the project site is located in the San Francisco Bay Area and thus at risk of moderate to high ground shaking, similar to other developments in the vicinity, this finding is consistent with the analysis in the previous 2004 FEIR, which determined that 2004 FEIR Mitigation Measure 10-1 would reduce these potentially significant impacts to a less than significant level.

Furthermore, according to the SFB report, the project site's susceptibility to liquefaction is low, and thus, there would be less than significant impacts in this regard. In addition, previous mass grading and removal of weak soils have since created a relatively level site that has a low potential for landslides. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

### **b) Summary of 2004 FEIR (soil erosion/loss of topsoil)**

The 2004 FEIR determined that construction of the Vista Del Mar development would leave on-site soils exposed to wind and water erosion. The resulting erosion could cause sediment to block culverts and stormwater channels and result in increased flooding in the development's vicinity. In addition, soil erosion would ultimately degrade water quality in Suisun Bay. These soil erosion impacts could be potentially significant. Therefore, to reduce these impacts to a

less than significant level, the 2004 FEIR identified Mitigation Measure 10-9, which required the preparation and implementation of an erosion control plan subject to City approval. Therefore, with implementation of this mitigation measure, the City concluded that impacts were less than significant.

### **Proposed Project Analysis and Conclusion**

Similar to the Vista Del Mar development evaluated in the 2004 FEIR, construction of the proposed project would reduce the project site's vegetation cover and increase the potential for significant soil erosion impacts. Implementation of 2004 FEIR Mitigation Measure 10-9 would reduce these potentially significant impacts to less than significant levels through preparation and implementation of an erosion control plan subject to approval by the City. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **c) Summary of 2004 FEIR (geologic instability)**

The 2004 FEIR determined that existing slopes on the Vista Del Mar development area greater than 30 percent could be subject to soil creep, and slopes greater than 20 percent could be susceptible to liquefaction and landslides during heavy rains. In addition, slopes that were proposed to be cut and filled could be subject to slope failure due to the steep gradients proposed. As a result, the development's grading proposals would be inconsistent with General Plan policy 10-P-3. Furthermore, the 2004 FEIR determined the BGC study did not identify mitigation for the adverse effects of long-term settlement, and therefore the development could result in potentially significant impacts. Additionally, soils on the Vista Del Mar development area were identified as moderately to highly corrosive to unprotected steel, resulting in potentially significant impacts to underground utility systems or building foundations. The 2004 FEIR also determined that future project site slope failure on the development area could damage on-site subsurface drainage systems without proper maintenance, resulting in potentially significant impacts. However, the City concluded that implementation of 2004 FEIR Mitigation Measures 10-3, 10-4, 10-5, 10-6, 10-8, and 10-12 would reduce the foregoing potentially significant impacts to less than significant levels.

### **Project Analysis and Conclusion**

According to the recent SFB Geotechnical Memo (Appendix C), the project site was previously graded under the guidance of BGC including the removal of all expansive soils and slopes. As a result, all significant impacts related to slope failure, liquefaction, debris flows, and landslides that were previously identified in the 2004 EIR would be less than significant with respect to the proposed project because the site no longer contains slopes susceptible to these risks. Similar to the 2004 EIR, the proposed project could still result in potentially significant impacts from long-term differential settlement, corrosive soils, and geotechnical maintenance. However, the proposed project would be required to implement 2004 EIR Mitigation Measures 10-6, 10-8, and 10-12, which would reduce these impacts to less than significant. Therefore,

the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 EIR determined that the Vista Del Mar development area contained expansive soils and any development, such as utility lines, roads, or building foundations, could result in long-term damage to these structures and therefore the 2004 EIR characterized these impacts as potentially significant. However, the 2004 EIR determined that implementation of Mitigation Measure 10-7 would require that expansive soils be removed or amended in accordance with applicable City standards. Therefore, the City concluded that impacts would be reduced to less than significant with incorporation of this mitigation.

**Proposed Project Analysis and Conclusion**

The project site is located within the same general footprint evaluated in the 2004 FEIR and contains the same expansive soils. According to the recent SFB Geotechnical Memo (Appendix C), the site was previously mass graded as a part of the larger Vista Del Mar residential development to the south under the guidance of Berlogar Geotechnical Consultants (BGC). In addition, the 2008 BGC report describes that all expansive soils on the project site were removed as part of previous mass grading and replaced with engineered fill. As a result, the proposed project is no longer at significant risk to expansive soils, and impacts would be less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR determined that the Vista Del Mar development area did not contain septic tanks or alternative wastewater systems. In addition, the Vista Del Mar development would connect to the City of Pittsburg sewer system and would not involve the installation of septic tanks or alternative wastewater systems. As a result, the 2004 FEIR determined that no impacts would occur.

**Proposed Project Analysis and Conclusion**

The proposed project would be located within the same general footprint evaluated in the 2004 FEIR, and would connect to the existing City sewer system. Similar to the Vista Del Mar development evaluated in the 2004 FEIR, the proposed project does not propose the use of septic tanks or alternative wastewater systems and no impacts would occur. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Geology and soils mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 10-1**      The project geotechnical engineer shall prepare a final design-level project geotechnical study subject to review and approval by an independent engineering geologist retained by the City at applicant expense. The review shall evaluate if the study and all of its conclusions are consistent with generally accepted geotechnical engineering practice and in agreement with the approved site development plan. Relevant provisions of the geotechnical study shall be incorporated into project grading and site preparation plans. All earthwork and site preparation shall be performed under the direct supervision of a State-certified geotechnical engineer or these measures to the satisfaction of the independent engineering geologist and the City Engineer would reduce this potential impact to a less-than-significant level.
- MM 10-4**      The City and its independent engineering geologist shall closely evaluate all project proposals for the construction of slopes in particular cut slopes steeper than three-to-one, to prevent future slope failures that could damage existing homes/project improvements or require slope repairs at the expense of the West Pittsburgh GHAD. If the stability of these proposed slopes can be independently confirmed, implement the construction measures recommended in the project geotechnical study. If the slopes stability cannot be confirmed redesign the slopes to achieve a flatter more sustainable gradient. Implementation of this measure to the satisfaction of the City-retained independent engineering geologist and City Engineer would reduce this potential impact to a less-than-significant level.
- MM 10-6**      Specification for site development shall include mandatory phasing for construction of site improvements as recommended by the project geotechnical engineer if settlement monitoring indicates that long-term settlement within individual fill areas could eventually exceed allowable amounts and damage or otherwise limit the usefulness of buildings or other improvements. Implementation of this measure to the satisfaction of the City retained engineering geologist and City Engineer would reduce this potential impacts to a less than significant level.
- MM 10-7**      In addition to the observation of all cut and fill slope construction the project geotechnical engineer shall inspect and certify that any expansive soils underlying individual building pads and all roadway subgrades have been either removed or amended in accordance with City-approved construction specifications. If expansive soils are not fully remediated on each lot and in the area of all public and private improvements at the time of site development the project geotechnical engineer shall make site-specific recommendations for grading,

drainage, installation of foundation design, the addition of soil amendments and or the use of imported non-expansive fill materials as may be required to fully mitigate the effects of weak or expansive soils and prevent future damage to project improvements. Following review and approval by the City-retained independent engineering geologist and City Engineer (see Mitigation 10-1) these recommendations shall be incorporated into a report to be included with each building permit application and with the plans for all public and common-area improvements.

- MM 10-8** Specification for site development shall include a protocol for verifying that adequate protection has been provided for all foundations and underground utilities that could be damaged by corrosive soils. The project civil engineer shall be responsible for implementation of this protocol with final approval by the City Engineer. Implementation of this measure would reduce this potential impact to a less-than-significant level
- MM 10-9** Prepare an erosion control plan subject to City approval and implement the plan during construction. The plan shall provide for long-term stabilization of all exposed soils upon the completion of project development. Implementation of this measure would reduce this potential impact to a less than significant level.
- MM 10-10** Educational materials that discourage overwatering in landscaped areas shall be furnished to all future lot owners and commercial/multi-family property managers at the time of purchase and periodically thereafter (perhaps by inclusion with water or tax bills), as part of an effort to control groundwater seepage. Area 1 property managers shall also be required to regularly maintain onsite drainage systems to ensure that storm water runoff is directed away from all slope areas.
- MM 10-12** Require project annexation to the West Pittsburgh Geologic Hazard Abatement District (GHAD) in order to adequately address the special circumstances and long-term geotechnical maintenance needs associated with development in areas of potential geologic instability. Establish a long-term funding mechanism for the maintenance of slopes and all other on-site conditions that could affect slope stability. The existence of and the responsibilities attached to project inclusion in the GHAD shall be clearly disclosed to all purchasers of property within the project site. In addition, all risks and liabilities associated with the ownership of project land in the vicinity of potentially unstable slopes shall be fully explained to potential buyers at the time of purchase. Implementation of these measures to the satisfaction of the City-retained engineering geologist and City Engineer would this potential impact to a less than significant level.

## Conclusion

The geology and soils conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| <b>VII. Hazards and Hazardous Materials</b>                                                                                                                                                                                    |                         |                                                                         |                                                                     |                                                         |                               |
| <i>Would the project:</i>                                                                                                                                                                                                      |                         |                                                                         |                                                                     |                                                         |                               |
| a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?                                                                                        | Less than significant   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?                                | Less than significant   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?                                                                | Less than significant   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | Less than significant   | No                                                                      | No                                                                  | No                                                      | N/A                           |

| Environmental Issue Area                                                                                                                                                                                                                                         | Conclusion in 2004 FEIR | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|-------------------------------------------------------------------------|---------------------------------------------------------------------|---------------------------------------------------------|-------------------------------|
| e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area? | N/A                     | No                                                                      | No                                                                  | No                                                      | N/A                           |
| f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?                                                                                                      | N/A                     | No                                                                      | No                                                                  | No                                                      | N/A                           |
| g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?                                                                                                                                        | N/A                     | No                                                                      | No                                                                  | No                                                      | N/A                           |
| h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?                                             | N/A                     | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Hazards and hazardous materials impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potentially significant

impacts utilizing the above environmental issue areas from Appendix G of the 2004 State CEQA Guidelines as thresholds of significance. 2004 FEIR hazards and hazardous materials impact discussions collectively address the above environmental issue areas as described below.

**a) Summary of 2004 FEIR**

The development analyzed in the 2004 FEIR was consistent with the General Plan land use designations for the site. In addition, since the General Plan did not identify significant hazardous materials use or disposal impacts with buildout of the Vista Del Mar development because land uses would be residential and commercial. These land uses are not associated with significant routine transport, use, or disposal of hazardous materials. Although hazardous materials could be stored, generated, and/or used on the project site, all hazardous materials would be required to be stored and handled in compliance with applicable local, State, and federal laws and regulations. Therefore, the City concluded that impacts were less than significant.

**Proposed Project Analysis and Conclusion**

Similar to the development analyzed in the 2004 FEIR, the proposed project would develop residential and commercial land uses. Project development would result in some hazardous materials storage and use typically associated with commercial and residential development; however, the proposed project does not propose industrial uses that would involve the routine transport, use, and disposal of significant hazardous materials. In addition, all hazardous materials used and stored on-site would be required to comply with applicable local, State, and federal laws and regulations. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR evaluated whether the Vista Del Mar development could potentially create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials. Though the EIR did not include further detailed analysis, the Vista Del Mar development, with its typical residential and commercial uses, was determined to have less than significant impact.

**Proposed Project Analysis and Conclusion**

Similar to the 2004 FEIR, the proposed project would not develop industrial land uses that involve significant uses of hazardous materials. In addition, the proposed project consists of fewer residential units and commercial space and as a result would result in less hazardous materials associated with these land uses. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 miles of an existing school. The City concluded that there would be a less than significant impact.

**Proposed Project Analysis and Conclusion**

Similar to the 2004 FEIR, the proposed project would develop residential units and commercial space generally consistent with the current General Plan land use designations. In addition, the proposed project would not emit hazardous emissions or handle hazardous materials, substances, or waste, because the proposed land uses do not involve these types of hazardous wastes. Similar to the 2004 FEIR, the proposed project would result in less than significant impacts. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 FEIR did not identify significant soil or groundwater contamination on the project site. Past underground storage tanks (USTs) were found to have released gasoline and impacted soils. However, previous laboratory analysis determined contaminated soil did not impact groundwater and would be excavated according to all applicable state and county laws, regulations and policies. The City determined that compliance with these requirements would reduce impacts to a less than significant level. Note that the 2004 FEIR does not discuss any findings of hazardous materials database sites, such as Envirostore or GeoTracker.

**Proposed Project Analysis and Conclusion**

According to the 2018 ENGEO Phase I ESA (Appendix D), there is no evidence of soil or groundwater impairments on the project site. In addition, ENGEO conducted an environmental records search of the project site and found no database sites on the property or in the vicinity that pose a significant risk. Similar to the 2004 FEIR, the proposed project would result in less than significant impacts. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would be located within an airport land use plan and would if so, would the development result in a safety hazard for people residing or working in the project area. Although the 2004 FEIR did not include further detailed analysis, the City determined that there would be no impact in this regard.

### **Proposed Project Analysis and Conclusion**

The closest public or private airport or airstrip is the Buchanan Field Airport, located approximately 5.83 miles to the southwest. The project site is located well outside the boundaries of the Airport Land Use Plan and no impacts would occur. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **f) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would be located in proximity to a public airport or private airstrip or otherwise would be located within the boundaries of an airport land use plan and thus result in a significant safety hazard for people residing or working in the project area. Although the 2004 FEIR did not include further detailed analysis, it was determined that there would be no impact in this regard.

### **Proposed Project Analysis and Conclusion**

Similar to the conclusions set forth in the 2004 FEIR, the proposed project would not include development in the vicinity of a private airstrip or public airport or otherwise fall within the boundaries of an airport land use plan. No impacts would occur. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **g) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would result in significant impacts by impairing implementation of an emergency plan or evacuation plan. Although the 2004 FEIR did not include further detailed analysis, it was determined that there would be no impact in this regard.

### **Proposed Project Analysis and Conclusion**

Similar to the development analyzed in the 2004 FEIR, the proposed project would be located in an otherwise fully developed area along West Leland Road, and SR 4 and would be accessible to all emergency services and evacuation routes; therefore, no substantial impairment to an emergency plan or evacuation route would occur. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**h) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would be result in significant risks associated with wildland fires. Although the 2004 FEIR did not include further detailed analysis, it was determined that there would be no impact in this regard.

**Proposed Project Analysis and Conclusion**

Similar to the development analyzed in the 2004 FEIR, the proposed project would be located in a highly urbanized area and not in an area susceptible to wildland fires and thus no impacts would occur. The project includes secondary access in compliance with fire district requirements, and also includes street widths and turnarounds in compliance with current fire code standards to ensure appropriate emergency access, circulation, and ingress/egress. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**Mitigation Measures**

No mitigation is required.

**Conclusion**

The hazards and hazardous materials conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                                                                                                                      | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| i) Expose people or structures to significant risk or loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? | No impact               | No                                                                      | No                                                                  | No                                                      | N/A                           |
| j) Inundation of by seiche, tsunami, or mudflow?                                                                                                                 | No impact               | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Hydrology and water quality impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified four potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 9-1 through 9-4 and related hydrology and water quality impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR found that stormwater runoff from the Vista Del Mar development area would degrade water quality downstream due to non-point source pollutants. This would result in potentially significant impacts to water quality standards. The 2004 FEIR determined implementation of 2004 FEIR Mitigation Measure 9-4 and incorporation of a Storm Water Pollution Prevention Plan (SWPPP) as described in 2004 FEIR Mitigation Measure 9-3 would reduce long-term non-point source pollutants. Therefore, the City concluded that impacts would be reduced to a less than significant level with incorporation of mitigation.

### Proposed Project Analysis and Conclusion

The proposed project involves development of the same uses within the same general footprint evaluated in the 2004 FEIR; however, the overall number of residential units and commercial square footage would be reduced. Similar to the Vista Del Mar development evaluated in the 2004 FEIR, development of the proposed project could potentially degrade water quality due to non-point source urban pollutants, resulting in potentially significant impacts.

Similar to the 2004 FEIR, implementation of 2004 FEIR Mitigation Measure 9-4 and incorporation of a SWPPP would reduce proposed project impacts to a less than significant level. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR considered the potential for a new development to substantially deplete groundwater supplies or interfere with groundwater. The 2004 FEIR found that groundwater quality in the Pittsburg Plain basin was poor, and there was no significant use of groundwater in the City; rather, it primarily obtains drinking water from surface supplies available through the Contra Costa Water District (CCWD). In addition, soils in the project vicinity were determined to have low permeability so it was unlikely significant groundwater recharge occurs on the project site. The City concluded that impacts were less than significant.

**Proposed Project Analysis and Conclusion**

Consistent with the Vista Del Mar development that was studied in the 2004 EIR, the City would continue to obtain water from CCWD and would provide potable water through available surface water supplies to the project site, as well as a small amount of well water (approximately 12 percent) to supplement the water purchased from CCWD. As a result, the proposed project would not substantially and adversely affect local aquifers by depleting groundwater supplies or interfering with groundwater recharge since CCWD relies primarily on surface water supplies, and therefore impacts would be less than significant in this regard.

The proposed project involves development of the same uses within the same general footprint evaluated in the 2004 FEIR; however, the overall number of residential units and commercial square footage would be reduced, with concurrent reduction in water demand. As a result, impacts would be similar to or less than what was evaluated in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 EIR found that grading and construction activity associated with the Del Mar Vista development would increase soil erosion and lead to increased sedimentation of downstream drainage facilities. This increase in sedimentation could cause localized flooding and increase turbidity in Suisun Bay resulting in potentially significant impacts. However, the 2004 EIR concluded that with the implementation of 2004 FEIR Mitigation Measure 9-3, which would require the incorporation of a SWPPP consistent with applicable State, RWQCB and local standards, impacts would be reduced to a less than significant level. Therefore, the City concluded that impacts would be less than significant with mitigation incorporated.

### **Proposed Project Analysis and Conclusion**

The project site has already been mass graded in connection with the adjacent Vista Del Mar development, and as part of this mass grading, applicable mitigation measures were implemented (including the incorporation of a SWPPP).

Similar to the development analyzed in the 2004 FEIR, the proposed project would require grading and construction activity that could lead to increased sedimentation in downstream drainage facilities; however, significant grading of the project site has already occurred as part of the broader Vista Del Mar development, as noted above. However, the proposed project would be required to implement 2004 FEIR Mitigation Measure 9-3, which would ensure that a SWPPP is incorporated into the proposed project's design. Implementation of this mitigation measure would reduce impacts to a less than significant level, consistent with the conclusions set forth in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **d) Summary of 2004 FEIR**

The 2004 FEIR found that construction of the Vista Del Mar development would create new impervious surfaces and increase the rate of stormwater runoff. This would be a potentially significant impact, because peak flow rates could exceed the existing planned capacity of downstream drainage systems. However, the 2004 EIR determined that implementation of 2004 FEIR Mitigation Measure 9-1 would ensure peak flows into the east highway culvert that would be located on-site as part of the stormwater detention facilities would be built to accommodate anticipated peak flows, and would be maintained according to adopted design criteria set by Caltrans, Contra Costa County Flood Control and Water Conservation District (CCCFCWCD), and the City. Therefore, the City concluded that the facility would be appropriately sized and would be operated and maintained to pursuant to performance standards to ensure that the planned capacity is not exceeded, and impacts would be less than significant.

### **Proposed Project Analysis and Conclusion**

A stormwater detention facility was built in the northern portion of the project site as part of the Vista Del Mar development. This detention facility was built in order to mitigate post development 10-year peak flows from the Vista Del Mar, San Marco, and Alves Ranch developments.

According to the 2018 Schaaf and Wheeler Detention Basin/Stormwater Memo (see Appendix E), the existing on-site stormwater detention facility would need to be increased to a total of 6.2 acre-feet as part of the proposed project design to be able to contain stormwater peak discharges. (While the project proposes a reduced unit count and commercial square footage, the remaining acreage could conservatively be covered in impervious surface leading to an overall increase in stormwater flow off-site.)

Similar to the analysis in the 2004 FEIR, the proposed project would be required to implement 2004 FEIR Mitigation Measure 9-1, which would require the mitigation of the project's post-development 10-year peak flows on-site through appropriate sizing of the detention facility. As noted in the project description, the increase in capacity would be accomplished by raising the elevation of the outfall structure. As a result, anticipated stormwater peak flows would continue to be adequately accommodated on-site in compliance Mitigation Measure 9-1. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR found that increased runoff caused by the Vista Del Mar development could worsen downstream flooding. In addition, CCCFCWCD determined the existing culvert and channel section were undersized and thus unable to fully accommodate the anticipated flows. These impacts could be potentially significant. However, the 2004 EIR concluded that with implementation of 2004 FEIR Mitigation Measure 9-2, which would require that proposed downstream improvements on Lines B and B-1 be completed, this would ensure that downstream culverts would provide sufficient capacity to accommodate post-development runoff in accordance with applicable standards and requirements. Therefore, the City concluded that impacts would be less than significant with the incorporation of mitigation.

**Proposed Project Analysis and Conclusion**

Similar to the 2004 Vista Del Mar development evaluated in the 2004 FEIR, the proposed project would also increase runoff volumes due to the creation of more impervious surfaces compared to existing conditions. However, the existing on-site stormwater detention facility would be increased to a total of 6.2 acre-feet as part of the proposed project design to be able to contain stormwater peak discharges. In addition, the proposed project would be required to implement 2004 FEIR Mitigation Measures 9-1 and 9-2, which would ensure that these impacts are reduced to less than significant, consistent with the conclusions in the 2004 FEIR. The proposed project does not anticipate any significant stormwater drainage changes beyond those analyzed in the 2004 FEIR. Therefore, the revised project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**f) Summary of 2004 FEIR**

As discussed in impact "a," stormwater runoff from the Vista Del Mar development could potentially grade water quality downstream due to non-point source pollutants associated with urban development. This would result in potentially significant impacts to water quality standards. The 2004 FEIR determined implementation of 2004 FEIR Mitigation Measure 9-4, which involved construction of an extended detention basin to accommodate anticipated stormwater runoff would reduce long-term non-point source pollutants. Therefore, the City

concluded that impacts would be reduced to a less than significant level with incorporation of mitigation.

#### **Proposed Project Analysis and Conclusion**

As discussed in impact “a,” and similar to the evaluation in the 2004 EIR, development of the proposed project could potentially degrade water quality due to non-point source urban pollutants resulting in potentially significant impacts. The proposed project would increase the capacity of the existing stormwater basin to ensure that anticipated peak stormwater flows can be accommodated, in compliance with Mitigation Measure 9-4. Similar to the 2004 FEIR, implementation of 2004 FEIR Mitigation Measure 9-4, which would involve retrofitting of the detention basin to raise the elevation of the outfall structure by 2 feet, would ensure that impacts related to water quality remain less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **g) Summary of 2004 FEIR**

The 2004 FEIR found that the Vista Del Mar development area was not located within a 100-year flood zone as delineated by the Federal Emergency Management Agency’s (FEMA) Flood Insurance Rate Map (FIRM), and no impact would occur. Therefore, no impacts were further discussed.

#### **Proposed Project Analysis and Conclusion**

The proposed project would be located within the same general footprint previously evaluated in the 2004 EIR, and thus would not be located in a 100-year flood zone as designated by FEMA FIRM. Accordingly, no impacts would occur. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### **h) Summary of 2004 FEIR**

The 2004 FEIR found that the Vista Del Mar development area is not located within a 100-year flood zone as delineated by the FEMA FIRM. Therefore, no impacts were further discussed.

#### **Proposed Project Analysis and Conclusion**

The proposed project would be located within the same general footprint previously evaluated in the 2004 FEIR, and thus would not be located in a 100-year flood zone as designated by FEMA FIRM. Accordingly, no impacts would occur. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**i) Summary of 2004 FEIR**

The 2004 EIR considered whether construction of the Vista Del Mar development could potentially expose people or structures to significant risk or loss as a result of dam or levee failure. The 2004 EIR noted the development area was not located in vicinity of a dam or levee. Therefore, the City concluded that no impact related to levee and dam failures would occur.

**Proposed Project Analysis and Conclusion**

The project site is within the general footprint previously analyzed by the 2004 EIR. Similar to the 2004 EIR, the proposed project is not located in a dam or levee inundation hazard zone, and no impacts would occur. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

**j) Summary of 2004 FEIR**

The 2004 EIR considered impacts as a result of the Vista Del Mar development associated with inundation by seiches, tsunamis, or mudflows. The 2004 EIR noted that the development area was not at risk to seiches, tsunamis, or mudflows due to its location, and no impacts would occur.

**Proposed Project Analysis and Conclusion**

Similar to the Vista Del Mar development evaluated in the 2004 EIR, the proposed project involves development within the same general footprint as previously evaluated in the 2004 EIR, which is not subject to seiches, tsunamis, or mudflows, and no impacts would occur. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 EIR. No additional analysis is required.

**Mitigation Measures**

Hydrology and water quality mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 9-1** Provide an on-site stormwater detention facility and maintenance program sufficient to permanently reduce peak rates of runoff into the east highway culvert, in accordance with adopted design and maintenance criteria, and subject to the approval of Caltrans, the CCCFCWCD, and the City Engineer. The project east highway culvert detention basin and all discharge structures shall be dedicated to a maintenance assessment district, in which future project property owners would be responsible for the facility's long term maintenance. Implementation of this measure to the satisfaction of the City Engineer would reduce this identified impact to a less than significant level.

- MM 9-2** The existing rate and volume of stormwater discharges from the project site shall not be increased until the proposed downstream drainage improvements on Lines B and B-1 have been completed and it has been confirmed that project-related discharges would not worsen either the extent or duration of downstream flooding. The applicant shall prepare a hydrology study that (a) confirms that the proposed new culverts to be installed downstream of Highway 4 would have sufficient capacity to accommodate post-development flows from the project site in addition to existing and future flows from the surrounding neighborhoods and (b) identifies which if any existing Line B and B-1 segments located farther downstream might also need upgrades to accommodate higher flow rates and/or alternatively what interim or permanent increase in on site detention storage volume should be provided to lower the rate of discharge during all storms to a level that does not cause new or more widespread flooding within neighborhoods located north of Highway 4. **The developer would then be responsible for design and construction of all improvements within the appropriate sections of Drainage Area 48B, Lines B and B 1 (as well as for any modifications required to also increase the volume of onsite detention storage), as may be identified by CCCFCWCD, based on their review of the hydrology report.**
- MM 9-3** In accordance with National Pollution Discharge Elimination System (NPDES) regulation, prepare a Storm Water Pollution Prevention Plan (SWPPP) consistent with State and RWQCB design standards, for implementation throughout project construction to control erosion on the project site, subject to the approval of the City Engineer. Implementation of this measure would reduce construction-related soil erosion impacts to a less than significant level.
- MM 9-4** To help reduce long-term accumulation of non-point source pollutants from the project within downstream surface water, incorporate long-term source control and pre-discharge treatment measures into the Storm Water Pollution Prevention Plan (SWPPP) described in MM 9-3, in accordance with Municipal Regional Stormwater Permit Order No. R2-2015-0049 NPDES No. CAS612008, subject to the approval by the City Engineering Division. Implementation of this measure would this identified impact to a less than significant level.

## Conclusion

The hydrology and water quality conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                                    | Conclusion in 2004 FEIR                     | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures                                                  |

## Discussion

Given that the proposed project involves the development of the same uses (although with fewer overall residential units and commercial square footage) within the same general footprint, land use impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis of land use and planning impacts. The 2004 FEIR identified three potential impacts utilizing the above environmental issue areas from Appendix G of the *State CEQA Guidelines* as thresholds of significance; all three impacts related to areas south of West Leland Road. As described below, Impacts 4-1, 4-2, and 4-3, as identified and discussed in the 2004 FEIR do not apply to the 2018 proposed project.

**a) Summary of 2004 FEIR**

The initial study prepared as part of the 2004 FEIR concluded that the project would not result in any impact related to physically dividing an established community. The initial study notes that “the project is located within the Pittsburgh city limits and is surrounded by existing or planned urban development and would not divide an established community.” No further analysis is required.

**Proposed Project Analysis and Conclusion**

The proposed project is on the same site as the development previously analyzed in the 2004 FEIR and contemplates similar residential and commercial uses. The proposed project contemplates less development (with an overall reduction the number of residential units and commercial square footage) and a minor shift in the location of the commercial portion of the proposed project from the western side of the site to the center of the site; however, the overall footprint of the proposed project does not differ from the previously approved development.

The proposed project would promote connectivity to the surrounding land uses, which consist of West Leland Road and the Vista Del Mar Subdivision to the south, and the San Marco development, containing residential and commercial developments on the west. Similar to the 2004 FEIR, the proposed project does not include features that would divide an established community, and therefore would be no impact. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR identified three potentially significant impact related to how the Vista Del Mar development could conflict with an applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but no limited to the general plan, specific plan, local coastal program, or zoning ordinance) that was adopted for the purpose of avoiding or mitigating an environmental effect.

In Impact 4-1, the 2004 FEIR discussed the fact that approximately 57 of the proposed single family lots would be located within 150 feet of the PG&E electrical transmission line easement, which could result in concerns and complaints regarding visual and noise effects, as well as electromagnetic field exposure. This relationship raised questions of consistency with the General Plan Policy 2-P-7, which calls for consideration of project compatibility with surrounding sensitive uses and ensuring that sensitive uses such as residences are not subject to hazardous or unhealthy conditions. The 2004 FEIR included Mitigation Measure 4-1, which requires the use of buffers between the residences and transmission lines, as well as notification in writing to all prospective residents of units within 150 feet of the edge of the transmission line easement to confirm the specific power ratings and associated visual characteristics would reduce impacts to less than significant.

In Impact 4-2, the 2004 FEIR indicated that the estate lots located to the south of West Leland Road was adjacent to property under Williamson Act contract. Mitigation 4-2 required notification to all prospective residents of the potential nuisances associated with abutting or nearby agricultural practices would reduce the impact to less than significant.

In Impact 4-3, the 2004 FEIR indicated that the residential development densities may conflict in visual character and scale with the adjoining Oak Hills neighborhood, effects that may be inconsistent with the General Plan, which calls for project compatibility with existing surrounding land uses and use of buffering to separate incompatible uses. Mitigation Measure 4-3 required either the development of detailed design guidelines for the transitional edges of the development, or relocation of higher density residential components to the central or western portion of the site, would reduce impacts to less than significant.

### **Proposed Project Analysis and Conclusion**

The proposed project is located approximately 1,200 feet north of the transmission line, therefore Impact 4-1 is not applicable to the proposed project, and no further analysis of this impact is required.

The project site is not located adjacent to land under the Williamson Act, and therefore Impact 4-2 is not applicable to the proposed project; therefore, no further analysis of this impact is required.

Regarding Impact 4-3, the Oak Hills neighborhood is located south of West Leland Road, and the Vista Del Mar development has already been constructed. The associated mitigation would not therefore be applicable to the 2018 proposed project.

The proposed project does not anticipate any significant land use planning conflict changes beyond those analyzed in the 2004 FEIR, and would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **c) Summary of 2004 FEIR**

The 2004 FEIR did not consider impacts related to applicable habitat conservation or natural community conservation plans as there were no habitat conservation or natural community conservation plans applicable to the Vista Del Mar development area at the time the 2004 FEIR was certified. It was therefore determined that no related impacts would occur.

### **Proposed Project Analysis and Conclusion**

There are no habitat conservation or natural community conservation plans applicable to the project site for the proposed project, and therefore no conflicts could arise. Therefore, the proposed project would not result in impacts different than analyzed under the 2004 FEIR. Therefore, the revised project would not introduce new significant environmental impacts or

create more severe significant environmental impacts than those analyzed in the 2004 FEIR.  
No additional analysis is required.

## Mitigation Measures

No mitigation is required.

## Conclusion

The land use conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                              | Conclusion in 2004 FEIR | Do the Proposed Changes Involve New or More Severe Significant Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

## Discussion

Mineral resource impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impact 16.3 and related mineral resources impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development could result in the loss of availability of known mineral resources that would be of value to the region and the residents of the state. As discussed in the 2004 FEIR, the California Department of Conservation has concluded that there are no significant mineral deposits in the City of Pittsburg. Therefore, the City concluded that there would be no impacts related to mineral resource that would be of value to the region and the residents of the state.

### Proposed Project Analysis and Conclusion

Similar to the development analyzed in the 2004 FEIR, the project site consists mainly of previously disturbed undeveloped land, historically used for cattle grazing. The proposed

project would be located on the same site as the development previously analyzed in the 2004 FEIR and contemplates the same uses. The California State Mining and Geology Board designates the project site as MRZ-1, an area where adequate information indicates that no significant mineral deposits are present or where it is judged that little likelihood exists for their presence.<sup>2</sup> Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR, which found that no potential impacts to mineral resources. No further analysis is required.

**b Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could result in the loss of availability of a locally important mineral resource site as delineated on a local general plan, specific plan, or other land use plan. The Mineral Deposits map in the *Pittsburg General Plan Update Existing Conditions Report* indicated that there is inadequate information for assignment to any other mineral resource zone. Therefore, the City concluded that there would be no impacts related to a locally important mineral resource recovery site.

**Proposed Project Analysis and Conclusion**

Similar to the development analyzed in the 2004 FEIR, the project site consists mainly of previously disturbed undeveloped land, historically used for cattle grazing. The site is not landscaped and is primarily characterized by bare soil and relatively flat and level ground. The proposed project is on the same site as the development previously analyzed in the 2004 FEIR and contemplates the same uses. Furthermore, the General Plan states that there are currently no significant deposits or active mining operations within the City of Pittsburg.<sup>3</sup> Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR, which found that no potential impacts to mineral resources. No further analysis is required.

## Mitigation Measures

No mitigation is required.

## Conclusion

The mineral resources conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels? | Less than significant   | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Noise impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified three potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 14-1, 14-2, and 14-3 and related noise impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The Vista Del Mar development area is located in an urbanized area adjacent to SR 4. The 2004 EIR considered that housing constructed as a result of the Vista Del Mar development would be located within 300 to 400 feet of SR 4, and along the edge of West Leland Road. The 2004 FEIR found that exterior noise levels at these future homes would exceed the “normally acceptable” noise level guideline established by the City for residential development, thereby resulting in potentially significant impacts. Implementation of 2004 FEIR Mitigation Measures 14-1(a), (b), and (c) would reduce noise levels to within the normally acceptable range. As such, the City concluded that impacts would be reduced to less than significant.

### Proposed Project Analysis and Conclusion

According to the “Revised Noise Contour Analysis,” prepared by Salter Associates in 2018 (Appendix F), the residential units that would be constructed near SR 4 as part of the proposed project would expose residents on private balconies to noise levels of approximately 75 db L<sub>dn</sub>. However, the proposed project no longer includes multi-family units; all proposed residential construction would be single family residences.

Similar to the 2004 FEIR, the proposed project would exceed the City’s 70 db L<sub>dn</sub> conditionally acceptable exterior noise level guideline for single family residences, thereby resulting in potentially significant impact. However, implementation of 2004 FEIR Mitigation Measures 14-1(a), (b) and (c), which require a detailed acoustical study, identification of site design

measures, and construction of noise barriers, where needed, would ensure that resulting noise levels are less than significant. Furthermore, this proposed project would expose fewer residents to excessive noise levels compared to the 2004 FEIR, because the proposed project involves the development of 346 housing units compared to 563 housing units that were evaluated under the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**b) Summary of 2004 FEIR**

The initial study prepared for the 2004 FEIR concluded that the project would have no impact related to groundborne vibration or groundborne noise. Accordingly, no further analysis was provided in the 2004 FEIR.

**Proposed Project Analysis and Conclusion**

The proposed project would be located on the same site as was evaluated in the 2004 FEIR and associated initial study. Accordingly, similar to the conclusions from the 2004 FEIR initial study, the project would have no impact related to groundborne vibration or groundborne noise. The proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 EIR found that proposed water pump station facilities as part of the Vista Del Mar development (located south of West Leland Road, adjacent to the PG&E transmission line easement) could result in a 3 dBA or more periodic increase in ambient noise levels at the adjoining residential property line. This was determined to be a potentially significant impact. Implementation of 2004 FEIR Mitigation Measure 14-2 would reduce these impacts to less than significant.

The 2004 EIR determined that implementation of the Vista Del Mar development would result in traffic noise increases along roadway segments in the project vicinity of between 1 dBA and 2 dBA. The City concluded that such increases would not cause a significant noise impact.

**Proposed Project Analysis and Conclusion**

As noted above, the pump station is located south of West Leland Road and was constructed as part of the Vista Del Mar development. Therefore, this impact and the associated Mitigation Measure 14-2 do not apply to the 2018 proposed project.

With respect to mobile source noise, while there would be a slight increase in the number of trips associated with the proposed project (despite the overall reduction in the number of residential units and commercial square footage) the increase in vehicle trips is associated with proposed retail uses as opposed to business commercial uses assumed in the 2004 FEIR.

However, this nominal increase would not result in periodic increases in ambient noise levels by three or more dBA to adjoining residential lots. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 EIR found that construction activity on the Vista Del Mar development area would increase noise levels at the adjacent Oak Hills and San Marco developments in excess of 60 dBA. In addition, due to the phasing of the development, this impact was determined to be significant because significant temporary noise impacts would occur over an extended construction period, which could last from six to 15 years. The 2004 EIR requires compliance with the General Plan policy limiting construction hours to between 8:00 a.m. and 5:00 p.m. from Monday to Friday. In addition, 2004 FEIR Mitigation Measure 14-3 would reduce temporary construction noise impacts to the maximum extent practicable. However, the City concluded that impacts would still be significant and unavoidable because of the length of construction period.

**Proposed Project Analysis and Conclusion**

The noise impacts from the construction of the 2018 proposed project would be similar in regard to maximum noise levels evaluated under the 2004 FEIR, but would be anticipated to be substantially less in overall length due to a reduction in the anticipated construction period. Therefore, impacts would remain significant and unavoidable and Mitigation Measure 14-3 would still apply. The proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The closest airport to the previously approved Vista Del Mar development is Buchanan Field Airport located approximately six miles to the southwest in the City of Concord. At this distance, the 2004 FEIR concluded that the Vista Del Mar development would be determined to not be located within the Land Use Compatibility Plan or noise contours. Therefore, given the distance of the development area from the nearest airport, the 2004 FEIR determined that it would not result in significant noise impacts in this regard.

**Proposed Project Analysis and Conclusion**

Consistent with the 2004 FEIR, the 2018 proposed project would develop the same site with the same uses (although with fewer overall residential units and less commercial square footage). The project site is approximately six miles to the northeast of Buchanan Field and not within the Land Use Compatibility Plan or noise contours. Therefore, similar to the analysis set forth in the 2004 FEIR, given the distance of the project site from the nearest airport, the proposed project would not introduce new significant environmental impacts or create more

severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**f) Summary of 2004 FEIR**

The 2004 FEIR did not identify any private airstrips in the vicinity of the development area. Therefore, the City concluded that the Vista Del Mar development would result in no noise impact related to private airstrips.

**Proposed Project Analysis and Conclusion**

Consistent with the 2004 FEIR, the 2018 proposed project would not be located near any private airstrips. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Noise mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

**MM 14-1 Implement the following:**

- (a) Acoustical Study.** Conduct an acoustical study in accordance with state Title 24 requirement that identified to City satisfaction the noise insulation and other features to be included in the design of the project residential structures in the vicinity of SR 4 and along West Leland Road sufficient to maintain interior noise levels at or below City and State standards (45 L<sub>dn</sub>).
- (b) Site Design Measures.** Design common outdoor use areas in the residential portions of the project to maintain exterior noise levels to “normally acceptable” levels. These areas shall be situated away from predominant noise sources or should be shielded by natural or created topographical features, barriers or the buildings themselves.
- (c) Noise Barrier.** Construct a noise barrier for residences proposed adjacent to West Leland Road. The noise barrier should extend approximately five to ten feet above the pad elevations to reduce traffic-generated noise levels to 60 dBA L<sub>dn</sub>. The barrier shall take the form of a wall, berm, and/or structures that shield the outdoor use areas of the first row of residences north and south of West Leland Road.

**MM 14-3 Reduce project construction period noise impacts on nearby residences by incorporating conditions in project construction agreements that, in addition to the applicable construction schedule requirements of the City of Pittsburg General Plan (limit noise-generating construction activities adjacent to existing**

developments to normal business hours between 8:00 a.m. and 5:00 p.m.), and the City's Standard Conditions of Approval regarding construction logistics, stipulate the following conventional construction period noise abatement measures:

- **Construction Equipment Mufflers and Maintenance.** Properly muffle and maintain all construction equipment powered by internal combustion engines.
- **Idling Prohibitions.** Prohibit unnecessary idling of internal combustion engines.
- **Equipment Location and Shielding.** Locate all stationary noise-generating construction equipment such as air compressors as far as practical from the existing nearby school and residences.
- **Quiet Equipment Selection.** Select quiet construction equipment, particularly air compressors, whenever possible. (Fit motorized equipment with proper mufflers in good working order.)
- **Noise Disturbance Coordinator.** Designate a "noise disturbance coordinator" (e.g., a City staff member) who would be responsible for responding to any local complaints about construction noise. The disturbance coordinator would determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and institute reasonable measures warranted to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site.
- **Truck Routes.** Route all construction traffic to and from the project site via designated truck routes where practical. Prohibit construction-related heavy truck traffic in residential areas where feasible.

Even with implementation of these restrictions, however, construction noise would represent a *significant unavoidable impact* (i.e., would require City adoption of a Statement of Overriding Considerations), as a result of the lengthy (approximately 6-to 15-year) construction period.

## Conclusion

The noise conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

## Discussion

Population and Housing impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impact 6.3 and related population and housing impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development could potentially induce substantial growth in population and employment in the area. The development analyzed consisted of 1,100 dwelling units estimated to increase the population by 3,202 people. The development was found to be consistent with the General Plan land use diagrams. The

breakdown of the Vista Del Mar Project by residential type differed from the General Plan as a result of the proposed transfer of residential density within the site towards SR 4 and the BART station. But as explained in the 2004 FEIR, the Vista Del Mar development was not expected to induce population growth beyond what was already anticipated in the General Plan EIR, and the City concluded that impacts would be less than significant.

The *Business Commercial* portion of the Vista Del Mar development was estimated to generate approximately 644 employees, once constructed. The project-related growth increment from buildout would contribute to the associated employment-related cumulative environmental impacts already described in the General Plan. Therefore, as explained further in the 2004 FEIR, the Vista Del Mar development would not be expected to induce substantial employment growth in the area beyond what was already anticipated in the General Plan EIR. For these reasons, the 2004 FEIR concluded that impacts in this regard would be less than significant.

### **Proposed Project Analysis and Conclusion**

The proposed project would develop fewer residential units and less commercial retail development than was contemplated in the 2004 FEIR, and in the 2008 Addendum.

The 2018 proposed project includes 346 housing units on approximately 25.93 acres, while the 2004 FEIR included 563 multi-family housing units on 32.1 acres.

Similarly, the 2018 proposed project includes up to 140,000 sf of retail/commercial uses on 12 acres, while the 2004 FEIR included 257,500 sf of commercial buildings on 14.8 acres.

The proposed project's design requires a minor modification to the location of some portions of the residential and commercial uses and accompanying zoning; however, the overall proposed land uses and intensity remain consistent with the uses and intensity analyzed in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **b) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially displace a substantial number of existing housing units. The Vista Del Mar development area contained two houses that were occupied by the former owners and their family. While these two homes would need to be demolished, the development would result in a net increase of 1,098 dwelling units. Therefore, the 2004 FEIR concluded that, because the Vista Del Mar development would add substantially more units than would be demolished, impacts would be less than significant.

### **Proposed Project Analysis and Conclusion**

The project site does not contain any housing units and thus no existing housing would be displaced. The proposed project would result in the construction of 346 housing units, and

does not anticipate any population and housing changes beyond those analyzed in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially displace a substantial number of people and necessitate the construction of replacement housing elsewhere. The Vista Del Mar development contained two houses, which would need to be demolished, that were occupied by the former owners and their family. The development would result in a net increase of 1,098 dwelling units. Therefore, the Vista Del Mar development would add substantially more units than would be demolished, and the City concluded that impacts would be less than significant.

**Proposed Project Analysis and Conclusion**

The project site does not contain any housing units and thus no people would be displaced. The proposed project would result in the construction of 346 housing units, and does not anticipate any population and housing changes beyond those analyzed in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

No mitigation is required.

## Conclusion

The population and housing conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| d) Parks?                                                                                                                                                                                                                                                                                                                                                                                                                       | Less than Significant with mitigation | No                                                                      | No                                                                  | No                                                      | 8-8 and 8-9                   |
| e) Other public facilities?                                                                                                                                                                                                                                                                                                                                                                                                     | Less than significant                 | No                                                                      | No                                                                  | No                                                      | None                          |

## Discussion

Public services impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified five potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 8-5, 8-6, 8-7, 8-8, and 8-9 and related public services impact discussions collectively address the above environmental issue areas as described below.

Two of the Impacts (8-6 and 8-7) relate to development south of West Leland Road, and would not therefore be applicable to the 2018 proposed project. Accordingly, the discussion of those two impacts is not carried forward into the 2018 proposed project.

### a) Summary of 2004 FEIR (fire protection)

The Vista Del Mar development was determined to increase demand for fire protection and emergency medical services provided by the Contra Costa County Fire Protection District (CCCYPD).

The 2004 FEIR determined that the Vista Del Mar development had the potential to conflict with City of Pittsburg and CCCFPD standards for road design for residential estate lots in the southern portion of the site, leading to the potential for impairment in meeting response times and evacuation goals, policies, and standards (2004 FEIR Impact 8-6). Furthermore, the development in the southern portion of the site would introduce urban uses adjacent to wildland areas where fire risks are high (2004 FEIR Impact 8-7). The City concluded that this potential impact associated with the development would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-6 and 8-7.

To meet the potential project-generated and cumulative demand for fire protection and fire response time goals, Fire Service Fees were required to be earmarked to help construct a new fire station in the project vicinity on a square and level one-acre parcel that meets the CCCFPD's location and site criteria. However, until CCCFPD facilities expansion needs could be identified in terms of size, staffing, equipment, and location, the assessment of associated environmental impacts would be highly speculative. The 2004 FEIR concluded that the project-related and cumulative effect would therefore not represent a significant "environmental" impact under CEQA and thus impacts would be less than significant.

### **Proposed Project Analysis and Conclusion**

The project site would be served by the CCCFPD. The nearest fire station is located at 800 West Leland Road, approximately 1.25 miles east of the project site. According to the General Plan, the response time goal is five minutes, and generally this goal can be reached for a location within 1.5 miles of a fire station.<sup>4</sup> The demand for fire service protection services associated with the 2018 proposed project would be less than what was evaluated in the 2004 FEIR, given the overall reduction in the number of residential units, lower commercial square footage, and the absence of further development south of West Leland Road. The proposed project would be subject to applicable Fire Service Fees, and the City of Pittsburg's Community Facilities District (CFD) 2017-1 for Fire Protection Services, to continue fund raising for a new station to enhance fire protection services for area residents.

Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **b) Summary of 2004 FEIR (police protection)**

As discussed in the 2004 FEIR, the Vista Del Mar development would increase demand for police services in the project site vicinity. To be consistent with General Plan's performance standard of 1.8 sworn officers per 1,000 people, approximately six additional sworn officers and associated support facilities would be needed in response to the estimated approximately 3,201 new residents. However, this increase in staffing did not represent a significant environmental impact under CEQA because this additional staff and support facilities could be

<sup>4</sup> City of Pittsburg. 2001. General Plan Pittsburg: A Vision for the 21<sup>st</sup> Century. November.

accommodated within existing facilities, and therefore no new or expanded law enforcement facilities would be necessary. Accordingly, the 2004 FEIR concluded that impacts would be less than significant.

The 2004 FEIR also evaluated whether project-related traffic would create congestion on West Leland Road, possibly delaying emergency response and limiting the Police Department's ability to evacuate the development area safely during an emergency or major disaster (Impact 8-5). The City concluded that this potential impact would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-5, which requires implementation of all traffic related mitigation measures (2004 FEIR, Chapter 7), as well as review by the police department of proposed emergency access provisions prior to tentative map approval.

### **Proposed Project Analysis and Conclusion**

The proposed project's impact on police services has already been analyzed in the 2004 FEIR; impacts would be less than what was evaluated in the 2004 FEIR given that the proposed project contemplates less development with an overall reduction of residential units and commercial square footage. In any event, consistent with the analysis in the 2004 FEIR, any potential impacts associated with the proposed project would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-5, as noted above. Mitigation Measure 8-5 requires implementation of all traffic related mitigation measures (2004 FEIR, Chapter 7), as well as review by the police department of proposed emergency access provisions prior to tentative map approval. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **c) Summary of 2004 FEIR (schools)**

The Vista Del Mar development area is served by the Mt. Diablo Unified School District (MDUSD). The 2001 General Plan EIR states, "new residential development in the Planning Area may generate additional student enrollment that would need to be accommodated by Mount Diablo Unified School." This impact is mitigated by the payment of school impact fees. State law limits the ability of a local jurisdiction to impose mitigation obligations in connection with school facilities impacts; specifically, to mitigate such impacts, the developer would be required to pay applicable school impact fees. Based on the required payment of school impact fees, the City concluded that impacts to school facilities were less than significant.

### **Proposed Project Analysis and Conclusion**

As noted in the 2004 FEIR, the project site is served by UMDUSD. Consistent with the analysis in the 2004 FEIR, the proposed project would be subject to applicable SB 50 school impact fees, which state law has determined represents full mitigation for potential impacts related to increased student enrollment. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR (parks)**

The 2004 FEIR notes that the project is generally consistent with the land use designations of the 2001 General Plan and therefore the General Plan EIR included the build out of the Alves Ranch project and associated effects on parks. The 2001 General Plan EIR stated, “future development may create a shortage of neighborhood park facilities accessible to all residents.” The 2004 FEIR determined that creation of park dedication and/or payment of a park in-lieu fee as discussed in Mitigation Measure 8-8 would fully mitigate any potential effects in this regard.

**Proposed Project Analysis and Conclusion**

The proposed project would increase demand for park and recreation in the project vicinity (2004 FEIR Impact 8-8), as previously evaluated in the 2004 FEIR. In addition, future Alves Ranch residents and employees, together with residents and employees of other anticipated development in the project vicinity, would contribute to a cumulative increase in demand for recreation facilities in the project site vicinity (2004 FEIR Impact 8-9). Accordingly, the proposed project would be expected to generate increased use of existing neighborhood parks, regional parks, and other City recreational facilities, such that substantial physical deterioration of these facilities could occur or be accelerated. However, this impact was previously evaluated in the 2004 FEIR; furthermore, the proposed project’s impacts in this regard would be lower than previously determined given the overall reduction in residential unit count and commercial square footage. The proposed project includes a total of approximately 0.9 acre for pedestrian circulation and/or active recreation and a total of approximately 1.28 acres of landscaped and irrigated open space. Also, an approximately 12-foot-wide Class I trail would be constructed on the north side of West Leland Road along the project frontage, connecting to an existing sidewalk to the west.

Furthermore, any potential impacts would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-8, which requires the payment of fees pursuant to Municipal Code section 17.32. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR (other facilities)**

The 2004 FEIR did not specifically evaluate whether development would result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, triggering the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities.

While the initial study called out the need for further review, it focused on water, sewer, and solid waste, and did not identify other facilities such as libraries in the analysis.

## Proposed Project Analysis and Conclusion

The proposed project would generate demand for public facilities, although because of the reduced unit count it would generate proportionately less demand than the 2004 Vista Del Mar development. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Public services mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 8-5**      **Implement mitigation measures identified in Chapter 7, “Traffic and Circulation,” of the 2004 FEIR to reduce the impacts on project-related traffic on West Leland Road and other local roads. In addition, require Police Department to review and approval of project-proposed emergency access provisions prior to Tentative Subdivision Map approval. Implementation of these measures would reduce project impacts on emergency response and evacuation to a less-than-significant level.**
- MM 8-8**      **To the satisfaction of the City, require the project applicant to comply with the park dedication requirements of chapter 17.32 of the City’s Municipal Code. Compliance with these requirements, which allow for either parkland dedication or payment of an in-lieu fee, would reduce the project’s impact on existing City park and recreation facilities to a less-than-significant level.**

## Conclusion

The public services conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                       | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

## Discussion

Recreation impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified no potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impact 8-8 and related recreation impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development could potentially increase the use of existing parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. The Park Development Division maintains acquisition of new parks and maintains recreational facilities and community centers in the City. Vista Del Mar project residents and employees would increase the demand for park and recreation services in project vicinity. Although the development consisted of 11.33-acre school/park site and individual tot lot, the 2004 FEIR concluded that development did not

include adequate public parks based on the estimated population increase of 2,651 and the city's parkland ratio of 5 acres per 1,000 residents, which indicates a need for 13.26 acres of parkland. Accordingly, the Vista Del Mar development could generate increased use of existing parks and City recreational facilities, such that substantial deterioration of facilities would occur or be accelerated (Impact 8-8). The cumulative increase in parks and recreation service demand could be expected to generate increased use of existing parks and facilities as well (Impact 8-9). The City concluded that this potential impact associated with the development would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-8, which requires compliance with Chapter 17.32 of the Municipal Code, including the provision of additional parklands or payment of an in-lieu fee.

### **Proposed Project Analysis and Conclusion**

The proposed project is on the same site as the project previously analyzed in the 2004 FEIR and contemplates the same uses. Furthermore, the proposed project contemplates less development in terms of overall residential unit count and commercial square footage, and therefore impacts would be lower than previously evaluated in the 2004 FEIR. In addition, the proposed project would provide several open space areas, shown as a series of green areas the site plan; a total of approximately 0.9 acres for pedestrian circulation and/or active recreation; and a total of approximately 1.28 acres of landscaped and irrigated open space are contemplated, which would be available to project residents and employees for recreational activities. The open space areas would be owned and maintained by the homeowners associations of the adjoining neighborhoods.

Mitigation Measure 8-8 would still apply to the project, ensuring compliance with the Municipal Code as it relates to the provision of parkland acreage or payment of an in-lieu fee. For the above reasons, similar to the 2004 FEIR, the impacts would be less than significant. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **b) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would include recreational facilities or require the expansion of recreational facilities, and concluded that, because the development would be required to comply with Municipal Code chapter 17.32, requiring the provision of sufficient parkland acreage or payment of an in-lieu fee, further expansion of facilities would not be triggered. For this reason, the City concluded that the development impact would be less than significant.

### **Proposed Project Analysis and Conclusion**

The proposed project is on the same site as the project previously analyzed in the 2004 FEIR and contemplates the same uses, but at a reduced density. Therefore, impacts associated with the 2018 proposed project would be reduced from what was evaluated and disclosed in the

2004 FEIR. The project does include the construction of approximately 0.9 acres for pedestrian circulation and/or active recreation and a total of approximately 1.28 acres of landscaped and irrigated open space. The construction of these facilities would be within the footprint of the proposed residential and commercial development, and would not therefore require the construction or expansion of facilities that could have an adverse effect on the environment. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Recreation mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

**MM 8-8**      **To the satisfaction of the City, require the project applicant to comply with the park dedication requirements of chapter 17.32 of the City's Municipal Code. Compliance with these requirements, which allow for either parkland dedication or payment of an in-lieu fee, would reduce the project's impact on existing City park and recreation facilities to a less-than-significant-level.**

## Conclusion

The recreation conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                                                                                                                                                                                                                                                      | Conclusion in 2004 FEIR                     | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures     |

| d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?                                 | No impact                                   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| e) Result in inadequate emergency access?                                                                                                                                              | No impact                                   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? | Significant and unavoidable with mitigation | No                                                                      | No                                                                  | No                                                      | 7-8                           |

## Discussion

Transportation/traffic impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. 2004 FEIR Impacts 7-1 through 7-8 and related transportation/traffic impact discussions collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development could potentially conflict with applicable measures of effectiveness for the performance of the circulation system. Fehr and Peers conducted a traffic impact study for the development that contemplated four traffic scenarios. Scenarios included baseline, baseline plus project, cumulative, and cumulative plus project conditions. The 2004 FEIR determined that significant impacts would occur under these scenarios to several intersections, and that 2004 FEIR Mitigation Measures 7-1 to 7-7 would reduce these impacts. However, the mitigation would not fully reduce impacts, as the City concluded that impacts would remain significant and unavoidable regarding local applicable measures of performance.

## **Proposed Project Analysis and Conclusion**

For purposes of a conservative analysis, a trip generation assessment was performed by Fehr and Peers on June 6, 2018 (Appendix G) to evaluate the proposed project's transportation impacts compared to the previous evaluation in the 2004 FEIR. According to the trip generation assessment, the proposed project would result in fewer peak hour vehicle trips compared to the 2004 FEIR project, although average daily trips would increase as a result of the increased retail/grocery component compared to the business commercial uses evaluated in the 2004 FEIR. Accordingly, 2004 FEIR Mitigation Measures 7-1 to 7-7 would still be imposed on the proposed project, funding a range of transportation improvements in the project vicinity.

Similar to the analysis and conclusions presented in the 2004 FEIR, the implementation of some of the transportation improvements must be completed by other jurisdictions; because implementation is out of the control of the City, the impacts are considered significant and unavoidable until such time as the improvements are constructed and operational. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **b) Summary of the 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially conflict with an applicable congestion management program, including but not limited to level of service (LOS) standards and travel demand measures, or other standards established by the county congestion management agency for the designated roads or highways. As described above, Fehr and Peers conducted a traffic impact study in 2004 that contemplated traffic scenarios under baseline, baseline plus project, cumulative, and cumulative plus project traffic conditions. Under these scenarios, the 2004 FEIR determined that significant traffic impacts would occur at several study intersections. Implementation of 2004 FEIR Mitigation Measures 7-1 through 7-7 would reduce these impacts to the extent feasible; however, the City concluded that significant and unavoidable impacts would still occur because implementation must be completed by other jurisdictions outside the control of the City.

## **Proposed Project Analysis and Conclusion**

As discussed previously, Fehr and Peers conducted an updated trip generation assessment (Appendix G) for the proposed project. According to this assessment, the proposed project would result in fewer peak hour vehicle trips compared to the 2004 FEIR, but slightly more average daily trips as a result of the increased retail/grocery component compared to the business commercial uses evaluated in the 2004 FEIR. Although the proposed project would have fewer peak hour trips and thus not worsen the effect as described in the 2004 FEIR, the impacts under the applicable LOS standards would remain the same. Accordingly, the proposed project would be required to implement Mitigation Measures 7-1 through 7-7 to reduce impacts to the extent feasible. Therefore, the proposed project would not introduce

new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The initial study prepared as part of the 2004 FEIR considered whether the Vista Del Mar development could potentially change air traffic patterns resulting in substantial safety risks. The initial study determined that the project would have no impact related to air traffic patterns; accordingly, no further analysis was required in the 2004 FEIR.

**Proposed Project Analysis and Conclusion**

Similar to the 2004 FEIR, the proposed project would not have any impacts related to air traffic patterns because the location remains the same and the distance to the nearest airport has not changed. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**d) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially increase hazards due to a design feature. The 2004 FEIR notes that the project site plan did not provide detailed circulation information for the area north of West Leland Road, and therefore on-site circulation could not be effectively analyzed. Circulation patterns and recommendations would be provided when detailed plans are submitted. The 2004 FEIR also recommends that direct pedestrian access be provided from the multi-family residential and commercial portions of the project to the BART station.

**Proposed Project Analysis and Conclusion**

Fehr & Peers conducted a review of on-site circulation in 2018, based on the detailed site plan provided for the 2018 proposed project. The results of this analysis informed the project description and application materials submitted by the applicant to ensure adequate circulation and provision of enhanced bicycle and pedestrian facilities to encourage and support the use of BART and bus service.

As noted in the project description, the project includes pedestrian enhancements such as a new sidewalk along the north side of West Leland Road to close an existing 1,100-foot sidewalk gap. The project also proposes enhanced crosswalks and bike racks in the commercial portion of the site to encourage and support alternative transportation modes. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR considered potential impacts to project site access and emergency vehicle access. Access relates to levels of service operation of intersections, roadway segments and on-site circulation, and is therefore tied to the implementation of transportation improvements required by Mitigation Measures 7-1 through 7-7. The 2004 FEIR concluded that although the implementation of the required mitigation would ensure adequate circulation and access to the site, the construction of some of the improvements are outside the control of the City and cannot therefore be guaranteed. Accordingly, the 2004 FEIR concluded that related impacts would remain significant and unavoidable until such time as the improvements are constructed and operational.

**Proposed Project Analysis and Conclusion**

Similar to the conclusion of the 2004 FEIR, implementation of Mitigation Measures 7-1 through 7-7 cannot be guaranteed and the resulting impact would remain significant and unavoidable until such time as the improvements are constructed and operational.

Regarding on-site access and circulation, as discussed in the project description, access to the site is proposed from three locations on West Leland Road. The main entrance would be at Alves Ranch Road, which would be a fully signalized intersection. A full access un-signalized intersection is also proposed west of Alves Ranch. This intersection would be offset from Tomales Bay Drive. A third EVA-only access is proposed on the eastern portion of the site approximately 500 feet east of Alves Ranch Road. The Fehr & Peers analysis and review by the City traffic engineer conclude that the proposed access would be adequate to serve the proposed site development and would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**f) Summary of 2004 FEIR**

The 2004 FEIR recommended that commercial uses on the project site have direct access to West Leland Road and direct pedestrian access be provided from the multi-family residential and commercial areas to the Pittsburgh/Bay Point BART station. In addition, the 2004 FEIR noted that the Vista Del Mar development required pedestrian and bicycle routes along public streets and within the proposed linear park system. The 2004 FEIR identified impacts to the nearby Pittsburgh/Bay Point BART parking lot, which was experiencing capacity issues at the time. The 2004 FEIR imposed Mitigation Measure 7-8, which requires provision of bus turnouts and transit amenities along the project frontage; however, the 2004 FEIR noted that these improvements would not completely mitigate the identified impact, and as a result the impact would remain significant and unavoidable.

## Proposed Project Analysis and Conclusion

The proposed project would result in fewer housing units and fewer residents compared to the 2004 FEIR. As a result, the proposed project would create less demand for pedestrian, bicycle, and transit services. Similar to the development evaluated in the 2004 FEIR, the proposed project is within walking distance of the Pittsburg/Bay Point BART station, and thus it is likely that transit use would increase given the close proximity to BART, which is consistent with applicable General Plan policies.

As noted in the project description, the project includes pedestrian enhancements such as a new sidewalk along the north side of West Leland Road to close an existing 1,100-foot sidewalk gap, which would directly support pedestrian connection to the BART station. The project also proposes enhanced crosswalks and bike racks in the commercial portion of the site to encourage and support alternative transportation modes. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Transportation/traffic mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

**MM 7-1      The project applicants shall contribute their fair share to the needed improvements at the Willow Pass Road/San Marco Boulevard/SR 4 Eastbound ramps intersection, which include the following:**

- **Re-striping of the southbound approach to reduce the lane configuration to one through lane, which creates an opportunity for a free right-turn at the eastbound off-ramp; and**
- **Creation of a free right-turn lane on the eastbound off-ramp, in addition to two dedicated left-turn lanes for a total of three approach left-turn lanes on the off-ramp.**

**The additional eastbound lane may require acquisition of right of way and the design would require approval from Caltrans. These improvements to be funded by the existing City and Easy County traffic mitigation fee programs. These improvement may be added to the City's Traffic Mitigation Fee Program so that the necessary funds will be made available. The project applicants pay their fair share contribution to these improvements.**

**Implementation of these improvements would reduce this impact to a less than significant level.**

**MM 7-2** In order to achieve an acceptable LOS at this intersection under future General Plan based cumulative conditions, the following improvement would be necessary:

- Create a westbound shared through/right-turn lane on West Leland Road;
- Create a second eastbound Left-turn lane on West Leland Road;
- Create a second eastbound through lane on West Leland Road; and
- Create an exclusive eastbound right-turn lane on West Leland Road

However, the creation of such additional capacity on the eastbound approach to this intersection would require substantial acquisition of additional right-of-way on land that has already been developed, which is not considered to be feasible given current constraints.

Alternatively, the morning (AM) peak hour operation at this intersection could be improved by adding a second eastbound left-turn lane on West Leland Road, which might be physically feasible. This measure shall be required if feasible. However, this improvement, the intersection would still operate at LOS F during both the AM and PM peak hour; so this measure would not reduce this impact to a less than significant level. Therefore, this cumulative impact is considered significant and unavoidable. The project applicant shall pay their fair share contribution towards any of these improvements deemed feasible by the City.

**MM 7-3** Project applicants shall pay a traffic mitigation fee equal to their fair share of the improvements needed to adequately serve projected cumulative morning (AM) and evening (PM) peak hour traffic volumes at the Bailey Road/Concord Boulevard intersection in the City of Concord. These improvements include:

- Construction of exclusive right-turn and left-turn lanes and a second through lane on the northbound approach;
- Construction of two exclusive left-turn lanes on the southbound approach; and
- Construction of a third through lane on both the eastbound and westbound approaches.

This fee shall be paid prior to recordation of a project final map, in an amount determined by the City Council in cooperation with the affected jurisdiction.

Implementation of this measure would reduce this cumulative impact to a less than significant level; however, this impact will remain a significant unavoidable cumulative impact until the improvements are installed by responsible jurisdiction that is to receive this fair share fees.

**MM 7-4** The project applicants shall contribute their fair share to the following needed improvements at the San Marco Boulevard/West Leland Road intersection:

- Convert the northbound shared through/right turn lane to an exclusive right turn lane; and
- Convert one of the northbound left-turn lanes to a northbound through lane.

Implementation of these improvements would involve changing the lane configuration at the intersection. Additional right of way acquisition would not be required. These improvements are not included in the current list of improvements to be funded by the existing City or East County traffic mitigation fee programs. This improvement may be added to the Traffic Mitigation Fee Programs so that the necessary funds will be made available. The project applicants shall pay their fair-share contribution to this improvement.

Implementation of these measures would reduce this impact to a less than significant level.

**MM 7-5** The project applicants shall contribute their fair-share to needed improvements at the Willow Pass Road/Avila Road intersection with two left-turn lanes and a right-turn lane on the westbound Avila Road approach, two left-turn lanes and a through lane on the southbound Willow Pass Road approach, and one right-turn lanes and one through lane on the northbound Willow Pass Road approach. The City shall work with other affected jurisdictions to develop an interjurisdictional funding mechanism for these improvements. These improvements may be included in the Pittsburg Traffic Mitigation Fee Program so that the necessary funds will be available at the time the improvements are needed. Otherwise, the project applicants shall be responsible for these improvements before development proceeds. These identified improvements would reduce this impact to a less than significant level.

**MM 7-6** The project applicants shall pay a traffic mitigation fee equal to their fair share of the improvements needed to adequately serve projected cumulative morning (AM) and evening (PM) peak hour traffic volumes at the Bailey Road/Myrtle Drive intersection in Contra Costa County and the City of Concord. These improvements include:

- Installation of a traffic signal
- Provision of a left-turn lane on the southbound Bailey Road approach; and
- Widening of the westbound Myrtle Drive approach to provide an exclusive left-turn lane.

Implementation of this measure would reduce this cumulative impact to a less than significant level; however, this impact will remain a significant unavoidable cumulative impact until the improvements are installed by responsible jurisdiction that are to receive these fair share fees.

- MM 7-7** As described above, the project applicants shall contribute their fair share to all applicable development impact fee programs including the East County Regional Impact Fee, which is designed to fund improvements to regional facilities including SR 4. However, the segment of SR 4 Between Willow Pass Road (Pittsburg) and Willow Pass Road (Concord) was improved several years ago, and no further improvements are included in the Strategic Plan of the Eat Contra Costa Regional Fee and Finance Authority. In the absence of addition capacity-enhancing freeway improvement projects, this cumulative impact is considered significant unavoidable.
- MM 7-8** The project shall construct bus turnouts and related transit amenities along the project frontage on West Leland Road and on internal roadways as needed. The placement and design of these amenities shall be determined in consultation with the City and Tri-Delta Transit. The purpose of these amenities would be to encourage transit use to the BART station. It is unlikely, however, that such improvement would entirely mitigate the identified cumulative impacts on BART parking. Therefore, in the absence of additional parking, this project impact is considered significant unavoidable.

## Conclusion

The transportation/traffic conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

| Environmental Issue Area                                                                                                                                                                               | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |

| <i>Would the project:</i>                                                                                                                                                                              |                                       |                                                                         |                                                                     |                                                         |                               |
| a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?                                                                                                    | N/A                                   | No                                                                      | No                                                                  | No                                                      | N/A                           |
| b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 8-3                           |
| c) Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?           | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 9-1 and 9-2                   |
| d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?                                                 | Significant and unavoidable           | No                                                                      | No                                                                  | No                                                      | 8-1 and 8-2                   |

| Environmental Issue Area                                                                                                                                                                                                          | Conclusion in 2004 FEIR               | Do the Proposed Changes Involve New or More Significant Severe Impacts? | New Circumstances Involving New or More Severe Significant Impacts? | New Information Requiring New Analysis or Verification? | 2004 FEIR Mitigation Measures |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|-------------------------------------------------------------------------|---------------------------------------------------------------------|---------------------------------------------------------|-------------------------------|
| e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | Less than significant with mitigation | No                                                                      | No                                                                  | No                                                      | 8-3                           |
| f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?                                                                                                            | Less than significant                 | No                                                                      | No                                                                  | No                                                      | N/A                           |
| g) Comply with federal, State, and local statutes regulations related to solid waste?                                                                                                                                             | Less than significant                 | No                                                                      | No                                                                  | No                                                      | N/A                           |

## Discussion

Utilities and service systems impacts associated with the proposed project would be consistent with those identified in the 2004 FEIR analysis. The 2004 FEIR identified potential impacts utilizing the above environmental issue areas from Appendix G of the *2004 State CEQA Guidelines* as thresholds of significance. Utilities and service systems impact discussions in Chapters 8 and 9 of the 2004 EIR collectively address the above environmental issue areas as described below.

### a) Summary of 2004 FEIR

The initial study prepared as part of the 2004 FEIR found that the project would have no impact related to wastewater treatment requirements, noting that “all project-related development would be subject to applicable wastewater treatment requirements, and would not cause exceedances of RWQCB treatment requirements.” No further analysis is required.

**Proposed Project Analysis and Conclusion**

As noted above, the initial study prepared as part of the 2004 FEIR found that the project would have no impact related to wastewater treatment requirements, noting that “all project-related development would be subject to applicable wastewater treatment requirements, and would not cause exceedances of RWQCB treatment requirements.” No further analysis is required.

**b) Summary of 2004 FEIR**

The 2004 FEIR discussed the capacity of the Delta Diablo Sanitation District (DDSD) to accommodate estimate wastewater flows from the project. The 2004 FEIR noted that although DDSD had sufficient capacity at that time, the extended timeline for build out of the Vista Del Mar project could result in less than sufficient capacity being available for later phases. Mitigation Measure 8-3 was included to require payment of appropriate fees as well as submittal of a sewage treatment adequacy evaluation to ensure that sufficient capacity would be available before building permits are issued for future phases. Implementation of Mitigation Measure 8-3 would ensure that impacts would be reduced to less than significant.

**Proposed Project Analysis and Conclusion**

Sanitary sewer service in the City of Pittsburg is provided by the City of Pittsburg and the Delta Diablo Sanitation District (DDSD). The DDSD administers the provisions of the wastewater discharge permit issued for its operations, subject to the requirements and limitations of the NPDES program enforced by the RWQCB.

The proposed project contemplates less development but in a manner consistent with the 2004 FEIR. Thus, demands placed on the wastewater collection and treatment system would be consistent with, albeit less than, utility demands generated by the 2004 FEIR. As described in the 2004 FEIR, the project would require connection to sewer lines, although the connection in 2018 would be to existing lines in West Leland Road, as the connection to lines in Willow Pass Road contemplated in the 2004 FEIR has already been constructed.

The DDSD treatment facility continues to have sufficient capacity to accommodate the proposed project. Furthermore, the proposed project would be required to implement NPDES requirements as appropriate, including the use of best management practices applicable to businesses that operate throughout the City. Therefore, the proposed project would not exceed wastewater treatment requirements and the impact would be less than significant, consistent with the analysis in the 2004 FEIR. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**c) Summary of 2004 FEIR**

The 2004 FEIR found that construction of the Vista Del Mar development would create new impervious surfaces and increase the rate of stormwater runoff. This would be a potentially

significant impact because peak flow rates could exceed the existing planned capacity of downstream drainage systems. In addition, the CCCFCWCD determined the existing culvert and channel section were undersized to accommodate the Vista Del Mar development. These impacts could be potentially significant. With the implementation of 2004 FEIR Mitigation Measures 9-1 and 9-2, which required the construction of new stormwater drainage facility and increased capacity of downstream drainage facilities, the potential impacts associated with the development would be reduced to less than significant.

### **Proposed Project Analysis and Conclusion**

As required by the 2004 FEIR, a stormwater detention facility was built in the northern portion of the project site as part of the Vista Del Mar development. This detention facility was built in order to mitigate post development 10-year peak flows from the Vista Del Mar, San Marco, and Alves Ranch developments. According to the Stormwater Calculations memorandum, analysis indicated that the volume in the water quality basin is slightly less than was originally calculated in 2008.

As described in the project description, to accommodate the currently estimated volume of stormwater runoff, the applicant proposes to increase the capacity of the stormwater detention basin by raising the elevation of the existing outfall by 2 feet. This proposed improvement would ensure that the project remains in compliance with Mitigation Measure 9-1. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

### **d) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would have sufficient water supplies available to serve the development from existing entitlements and resources, or if new or expanded entitlements are needed. The 2004 FEIR noted that on-site groundwater wells provided water for the existing residences, office building, and construction yard operation. The Vista Del Mar development area is located within the Contra Costa Water District (CCWD) service area boundaries, and within the boundaries of the Los Vaqueros Project (LVP) planning area, and would be served by the City through a wholesale contract with CCWD. The Vista Del Mar 2004 FEIR estimated that the development would generate approximately 624,000 gallons of domestic water demand. The Water Supply Assessment indicated that the City may not be able to meet projected demands in the latter years of a multi-year drought (2004 FEIR Impact 8-1). The City concluded that this potential impact associated with the development would remain significant and unavoidable until such time as achievable water supplies are identified.

Following certification of the 2004 FEIR, and in accordance with Mitigation Measure 8-1, the applicant provided a subsequent water analysis and demonstrated to the satisfaction of the city that sufficient water would be available for the development as proposed in 2004.

**Proposed Project Analysis and Conclusion**

According to the Alves Ranch Development Future Demand Memorandum (Appendix H), the 2018 project water demand would be approximately 19 percent less than what was shown in the City of Pittsburg Water System Master Plan and discussed in the 2004 FEIR, because of the reduction in overall residential unit count and commercial square footage. As the applicant has already established sufficient water for the higher demand estimates assumed in the 2004 FEIR, the 2018 proposed project would therefore have sufficient water supplies to meet its estimated demand. Therefore, the proposed project would not introduce new environmental impacts or create more severe environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**e) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development could potentially result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments.

The DDSD estimates the sewage generated by the development would equate to 1,211 equivalent residential units (ERUs), sewage generation level below DDSD's 1996 buildout anticipated level of 1,218 ERUs. By the time of buildout, DDSD treatment facilities may not have adequate capacity due to other cumulative development demands, as identified in 2004 FEIR Impact 8-3. Sewage treatment demand associated with the Vista Del Mar development, combined with demand from development pending, approved, or under construction in the project vicinity and elsewhere in Pittsburg, may exceed the available treatment plant capacity. The City concluded that this potential impact associated with the development would be reduced to less than significant with implementation of 2004 FEIR Mitigation Measure 8-4.

**Proposed Project Analysis and Conclusion**

The proposed project contemplates less development but in a manner consistent with the 2004 FEIR. Because of the reduced unit count, the 2018 proposed project would demand less wastewater treatment than what was estimated in the 2004 FEIR and the impact would be less than significant. Mitigation Measure 8-3 would still be imposed, which requires payment of applicable DDSD service fees. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

**f) Summary of 2004 FEIR**

The 2004 FEIR considered whether the Vista Del Mar development would be served by a landfill with sufficient permitted capacity. The 2004 FEIR determined that new development could generate demand for solid waste services and that the Potrero Hills landfill had sufficient capacity to serve the solid waste demands of the project. The City concluded that compliance

with General Plan policies and City ordinances applicable to recycling would ensure impacts are less than significant.

### Proposed Project Analysis and Conclusion

The proposed project would develop 217 fewer residential units and less overall commercial square footage compared to the development analyzed in the 2004 FEIR, resulting in fewer impacts than previously evaluated. The proposed project would be served by a landfill that continues to have sufficient capacity and the impact would be less than significant. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

#### g) Summary of 2004 FEIR

The 2004 FEIR considered whether the Vista Del Mar development would comply with all Federal, State, and local policies related to solid waste. The 2004 FEIR determined that new development could generate demand for solid waste services, and the City concluded that compliance with General Plan policies and City ordinances applicable to recycling would ensure impacts are less than significant.

### Proposed Project Analysis and Conclusion

Similar to the 2004 FEIR project, the proposed project would comply with all applicable solid waste policies and regulation resulting in less than significant impacts. Therefore, the proposed project would not introduce new significant environmental impacts or create more severe significant environmental impacts than those analyzed in the 2004 FEIR. No additional analysis is required.

## Mitigation Measures

Utilities and service systems mitigation measures from the 2004 FEIR applicable to the 2018 proposed project are listed below. Portions of mitigation measures not addressed by the 2018 proposed project and which remain outstanding appear in **bold type**:

- MM 8-1** As required by State SB 221, prior to City approval of a final map for the proposed project, the City of Pittsburgh Community Development Department shall undertake a subsequent water supply analysis, which shall describe the citywide water supply situation at that future time (including valid water rights, infrastructure financing, permits, and approvals), including the status of (i.e., City progress on) current City studies and plans for expanding its reclaimed water program and conservation efforts and finding opportunities for future short-term water purchases. As required by SB 221, no final map shall be approved for the project until the City concludes, based on a written verification prepared in compliance with SB 221 and on the availability of other water supplies, as demonstrated by substantial evidence in the record, that sufficient water will be available to serve the proposed project needs, in

addition to existing and planned future uses, during normal, single dry, and multiple dry years within a 20-year projection.

**The project applicant shall be required to comply with all applicable current and future City of Pittsburg water demand performance standards, including standards included in the City of Pittsburg Urban Water Management Plan, the City's reclaimed water project, and the City's water conservation program.**

Minus substantial evidence that these measures would mitigate this impact—i.e., would lead to the identification and realization of adequate additional water supplies—the effectiveness of this mitigation measure is unknown at this time. Therefore, until achievable water supplies are identified, this impact is considered to be significant unavoidable impact.

- MM 8-3**      **As a condition of Tentative Subdivision Map approval, the applicant shall: (1) comply with applicable per-unit conveyance system fees levied by DDSD and (2) demonstrate to the satisfaction of the DDSD and the City Engineer that DDSD sewage treatment capacity will be adequate to serve the development. This requirement shall be met through preparation of a sewage treatment adequacy evaluation in coordination with and to the satisfaction of the City Engineer. No project development requiring sewage treatment service beyond the 1218-ERU total anticipated by the DDSD shall be allowed until adequate sewage treatment capacity is demonstrated as required by this mitigation measure. Implementation of this measure would reduce the project's potential impact on sewage treatment service to a less-than-significant level.**

## Conclusion

The utilities and service systems conclusions in the 2004 FEIR remain unchanged in light of the revisions contemplated in the 2018 proposed project.

## Appendix A: Biological Resources Memorandum

## MEMORANDUM

**DATE:** June 27, 2018

**TO:** Mandy Leung and Scott Hilk

**FROM:** Ross A. Dobberteen, Ph.D.

**SUBJECT:** Review of Current Biological Conditions in the Alves Ranch Project Area with Respect to 2004 DEIR Mitigation Measures, Vista Del Mar in Pittsburg, Contra Costa County, California

Per your request, LSA, Inc. (LSA) presents this memo regarding our review of current site conditions at the Alves Ranch Project Site south of West Leland Road near the Vista Del Mar residential development in Pittsburg, California. The purpose of our assessment was to determine if any new potential biological features were present on the site that were not originally addressed in the 2004 Draft Environmental Impact Report (DEIR) and associated mitigation measures. This memo is based on our on-going discussions about the proposed Alves Ranch Project, as well as LSA's prior work on the property on a continuous basis since 2002.

### Methods:

Prior to conducting the site visit, all of the project files were reviewed related to the Vista Del Mar development project, which included lands south of West Leland Road where the proposed Alves Ranch Project will be built. Specifically, permits were obtained to grade the Alves Ranch Project area and construct a water quality detention basin in 2004-2005. The California Natural Diversity Database (CNDDDB) was also reviewed for records of any special-status species occurrences in the project vicinity since LSA's original biological assessment in 2002. Finally, aerial imagery from Google Earth was examined to look for any signs of ponding on the site since the project area was graded.

On June 12, 2018, I conducted a site visit that involved walking transects (approximately 100 feet apart) across the level portion of the project area to search for any new biological resources, such as wetlands or habitats for special-status species. I also walked down to the bottom of the water quality detention basin via maintenance roads to inspect the conditions and outfall structures.

## Results:

Presented below is a summary of my observations during the site visit:

- Other than the constructed water quality detention basin adjacent to Highway 4, a majority of the site was level as a result of the grading activities in 2004-2005.
- The property has been maintained since the grading activities in 2004-2005. The level portions of the site had been recently disced and appeared to have been planted with wild oats, which is the dominate vegetation type on most of the site. There are a few coyote brush shrubs scattered throughout the site.
- The level portions of the site had several constructed drainage ditches that went to drop inlets as part of the water quality detention basin system that was constructed in 2004-2005; the ditches were dry and were dominated by upland vegetation.
- Based on the Corps of Engineers approved wetland delineation from 2001, the Alves Ranch Project area had a single ephemeral drainage approximately 200 feet long in the center of the site. The feature, which was filled in 2004-2005, was not observed during the course of the 2018 site visit. All of the permit conditions associated with the authorization to fill the ephemeral drainage have been satisfied.
- The bottom of the water quality detention basin is dominated by cattails (*Typha* sp.) and non-native common reed (*Phragmites australis*). At the time of the site visit, the bottom of the basin was dry and no standing water was observed.
- The water quality detention basin has been maintained since it was constructed in 2004-2005, consisting of periodic vegetation control and debris removal from the trash racks. As recently as 2012, additional modifications were made to the water control structures and the basin was also re-graded.

## Conclusions:

In summary, no new biological resources are present on the proposed Alves Ranch Project site based on my site visit, and nothing about the proposed Project would trigger any new significant impacts or increase the severity of significant impacts previously identified in the 2004 EIR. Therefore, the applicable biological resource mitigation measures in the DEIR, including, without limitation, a pre-construction survey to search for active native bird nests, should be imposed on the construction of the proposed Alves Ranch Project, which would ensure that all identified biological resource impacts are adequately mitigated.

Please do not hesitate to contact me if you have questions and/or require further information regarding this assessment.
